22UMA102C	Mathematics for Civil Sciences-I	04-Credits
Hrs/Week : 3:0:2	(Integrated)	CIE Marks:50
Total Hours: 40 Hrs	(Integrated)	SEE Marks:50

Course Objectives: The goal of the course Mathematics for Civil Sciences-I is to

- 1) **Familiarize** the importance of calculus associated with one variable and two variables for Civil engineering.
- 2) Analyze Civil engineering problems applying Ordinary Differential Equations.
- 3) **Develop** the knowledge of Linear Algebra referring to matrices.

UNIT – I Calculus

Introduction to polar coordinates and curvature relating to Civil engineering.

Polar coordinates, Polar curves, angle between the radius vector and the tangent, and angle between two curves. Pedal equations. Curvature and Radius of curvature (No proof) - Cartesian, Parametric, Polar and Pedal forms. Problems.

Self-study: Center and circle of curvature, evolutes and involutes.

Applications: Structural design and paths, Strength of materials, Elasticity.

(RBT Levels: L1, L2 and L3)

Web links and Video Lectures (e-Resources):

- 1. Introduction to Polar coordinates : Unit-I <u>https://youtu.be/aSdaT62ndYE</u>
- 2. Polar Equation to Rectangular equation <u>https://youtu.be/flTz_pSzVFI</u>
- 3. Rectangular equation to polar wquation <u>https://youtu.be/fTBkr27r3pw</u>
- 4. How to Graph polar equations <u>https://youtu.be/jO4lwddfeDA</u>
- 5. Examples on angle between radius vector and tangent <u>https://youtu.be/_RZx377w4nc</u>
- 6. Curvature <u>https://youtu.be/EMo0vaphXpU</u> <u>https://youtu.be/ugtUGhBSeE0</u> https://youtu.be/gspjhwSNMWs

UNIT – II Series Expansion and Multivariable Calculus

10 Hrs

10 Hrs

Introduction to series expansion and partial differentiation in the field of Civil engineering applications.

Taylor's and Maclaurin's series expansion for one variable (Statement only) – problems. Indeterminate forms - L'Hospital's rule $(0/0, \infty/\infty, \infty-\infty)$, problems. Partial differentiation, total derivative - differentiation of composite functions. Jacobian and problems. Maxima and minima for a function of two variables - Problems.

Self-study: Euler's theorem and problems. Method of Lagrange's undetermined multipliers with single constraint.

Applications: Computation of stress and strain, Errors and approximations, Estimating the critical points and extreme values.

(RBT Levels: L1, L2 and L3)

Web links and Video Lectures (e-Resources):

1. Why Taylors and Maclaurins series UNIT-II

https://youtu.be/LDBnS4c7YbA

2. Indeteminate forms

https://youtu.be/oEEXnyupzdo

https://youtu.be/Gh48aOvWcxw

3. Partial differentiation and its visualization

https://youtu.be/AXqhWeUEtQU

https://youtu.be/dfvnCHqzK54

UNIT – III Ordinary Differential Equations (ODEs) of first and Higher

10 Hrs

order	
Introduction to first and higher-order ordinary differential equations pertaining t	o the
applications for Civil engineering.	
Linear and Bernoulli's differential equations. Exact and reducible to exact different	tial equations -
Integrating factors on 1/2 (22/22 – 22/22) 222 1/2 (22/22 – 22/22). Orthogo	onal trajectories
and Newton's law of cooling. Higher-order linear ODEs with constant coeffici	ients - Inverse
differential operator, method of variation of parameters, Cauchy's and Legendre's	s homogeneous
differential equations - Problems.	
Self-Study: Applications of ODEs in Civil Engineering problems like bending of the	beam, whirling
of shaft. Formulation and solution of Cantilever beam. Finding the solution by	the method of
Undetermined coefficients.	
Applications: Rate of Growth or Decay, Conduction of heat. Oscillations of a spring	g, Transmission
lines, Highway engineering.	
(RBT Levels: L1, L2 and L3)	
Web links and Video Lectures (e-Resources):

https://youtu.be/O-9-IXO9230	
3. How to solve second order DE using scilab	
https://youtu.be/tOL5ErEOK90	
https://youtu.be/tg_QM9b1bdA	
https://youtu.be/UkZmROLRzRA	
UNIT – IV Linear Algebra	10 Hrs
Introduction of linear algebra related to Civil Engineering applications.	
Elementary row transformation of a matrix, Rank of a matrix. Consistency and solution	n of a system of
linear equations - Gauss-elimination method, Gauss-Jordan method and approximation	ate solution by

linear equations - Gauss-elimination method, Gauss-Jordan method and approximate solution by Gauss-Seidel method. Eigen values and Eigenvectors, Rayleigh's power method to find the dominant Eigen value and Eigenvector.

Self-Study: Solution of a system of linear equations by Gauss-Jacobi iterative method. Inverse of a square matrix by Cayley- Hamilton theorem.

Applications: Structural Analysis, Balancing equations.

(RBT Levels: L1, L2 and L3)

Web links and Video Lectures (e-Resources):

List of Laboratory experiments (2 hours/week per batch/ batch strength 15) 10 lab sessions + 1 repetition class + 1 Lab Assessment

6	i)Solve $2y'' - 5y' + y = 0$, $y(3) = 6$, $y'(3) = 1$.
	ii)Solve $y'' + 3y' - 10y = 0$, $y(0) = 1$, $y'(0) = 3$

Suggested Learning Resources:

- Maurice D weir, Joel Hass and Frank R. Giordano, "Thomas calculus", Pearson, eleventh edition, 2011
- B.S. Grewal : Higher Engineering Mathematics, Khanna Publishers, 44th Edition, 2017.
- B. V. Ramana: "Higher Engineering Mathematics" 11th Edition, Tata McGraw-Hill, 2010.
- Erwin Kreyszing's Advanced Engineering Mathematics volume1 and volume11, wiley India Pvt.Ltd., 2014
- **N.P Bali and Manish Goyal**: "A textbook of Engineering Mathematics" Laxmi Publications, 10th Ed., 2022.
- C. Ray Wylie, Louis C. Barrett: "Advanced Engineering Mathematics" McGraw Hill Book Co., Newyork, 6th Ed., 2017.
- Gupta C.B, Sing S.R and Mukesh Kumar: "Engineering Mathematic for Semester I and II", Mc-Graw Hill Education (India) Pvt. Ltd 2015.
- **H. K. Dass and Er. Rajnish Verma:** "Higher Engineering Mathematics" S. Chand Publication, 3rd Ed., 2014.
- James Stewart: "Calculus" Cengage Publications, 7th Ed., 2019.
- David C Lay: "Linear Algebra and its Applications", Pearson Publishers, 4th Ed., 2018.
- **Gareth Williams:** "Linear Algebra with applications", Jones Bartlett Publishers Inc., 6th Ed., 2017.

Course Outcomes: At the end of the course the student will be able to:

CO1: Apply the knowledge of calculus to solve problems related to polar curves.

CO2: Learn the notion of partial differentiation to compute rate of change of multivariate functions. **CO3:** Analyze the solution of ordinary differential equations.

CO4: Make use of matrix theory for solving for system of linear equations and compute Eigen values and eigenvectors.

Course	Pro	gram	ne Out	comes								
Outcomes	1	2	3	4	5	6	7	8	9	10	11	12

22UPH106C		04-Credits
Hrs/Week : (3:0:2)	Physics For Civil Sciences	CIE Marks:50
Total Hours: 60 Hrs (40L+20 P)	(Integrated)	SEE Marks:50

- 1. To study the properties, generation & engineering applications of types of oscillations & shockwaves.
- 2. To study the basics of Laser and optical fiber and their engineering applications.
- 3. To identify the importance of acoustics, radiometry and photometry for engineering applications.
- 4. To study the Elastic properties of materials and failures of engineering materials.
- 5. To understand the various natural disaster and safety.

UNIT - I	10 Hrs
Oscillations: Simple Harmonic motion (SHM), the differential equation for SHM(no	derivation),
Sprigs:Stiffness Factor and its Physical Significance, series and parallel com	nbination of
springs(Derivation), Types of spring and their applications. Theory of damped oscillations	(Qualitative),
Types of damping (Graphical Approach). Engineering applications of damped oscillation	ns, Theory of
forced oscillations(Qualitative), resonance, sharpness of resonance. Numerical problems.	
Laser: Introduction absorption spontaneous emission and stimulated emission Einstein's	s coefficients

Laser: Introduction, absorption, spontaneous emission and stimulated emission, **Einstein's coefficients** (expression for energy density). Conditions for laser action, requisites of a laser system, working mechanism. Characteristics of a laser. Classification of lasers, Semiconductor laser, Laser Range Finder, LIDAR, Road Profiling, Bridge Deflection, Speed Checker. Numerical Problems.

Pre-requisites: Basics of Oscillations, Properties of light

Self-learning: Simple Harmonic motion, differential equation for SHM

UNIT – II

Optical fibers: Principle and Construction of optical fibers, Acceptance angle and numerical aperture(NA), Expression for NA, Modes of Propagation, Attenuation and Fiber Losses, Fiber Optic Displacement Sensor, Fiber Optic Temperature Sensor,

Numerical problems

Acoustics: Introduction to acoustics, Types of Acoustics, reverberation and reverberation time, absorption power and absorption coefficient, Requisites for acoustics in auditorium, Sabine's formula (derivation), measurement of absorption coefficient, factors affecting the acoustics and remedial measures, Noise and its Measurements, Sound Insulation and its measurements. Impact of Noise in Multi-storied buildings.

Pre-requisites: Basics of Sound,

Self-learning: Introduction to acoustics, Propagation Mechanism & TIR in optical fiber

UNIT - III

10 Hrs

10 Hrs

Elasticity: Stress-Strain Curve, Stress hardening and softening. Elastic Moduli, Poisson's ratio, Relation between Y, n and σ (with derivation), mention relation between K, Y and σ , limiting values of Poisson's ratio., Single Cantilever (derivation) and their Engineering Applications, Elastic materials (qualitative). Failures of engineering materials - Ductile fracture, Brittle fracture, Stress concentration, Fatigue and factors affecting fatigue (only qualitative explanation), Numerical problems.

Radiometry and Photometry: Radiation Quantities, Spectral Quantities, Relation between luminance and Radiant quantities, Reflectance and Transmittance, Photometry (cosine law and inverse square law).

Pre-requisites:Elasticity, Stress & Strain,

Self-learning: Stress-Strain Curve

UNIT - IV10 HrsShock waves: Mach number and Mach Angle, Mach Regimes, definition and characteristics of Shock waves,
Construction and working of Reddy shock tube, Applications of Shock Waves,Numerical problems.Shock waves, Introduction, Earthquake, (general characteristics, Physics of earthquake,
Richter scale of measurement and earthquake resistant measures), Tsunami (causes for tsunami,

characteristics, adverse effects, risk reduction measures, engineering structures to withstand tsunami), Landslide (causes such as excess rainfall, geological structure, human excavation etc, types of landslide, adverse effects, engineering solution for landslides). Forest Fires and detection using remote sensing. Fire hazards and fire protection, fire-proofing materials, fire safety regulations and firefighting equipment -Prevention and safety measures. Numerical problems.

Pre-requisite: Oscillations

Self-learning: Richter scale

12. https://virtuallabs.merlot.org/vl_physics.htmlhttps://phet.colorado.eduhttps://www.myphysicslab.com

Laboratory Component:

Any Ten Experiments have to be completed from the list of experiments

List of Experiments:

- 1. Determination of effective spring constant of the given springs in series and parallel combination
- 2. Study of forced mechanical oscillations and resonance.
- 3. The study of frequency response in series and parallel LCR circuits.
- 4. Identification of passive components and estimation of their values in a given black Box
- 5. Characteristics of a Laser using diffraction grating
- 6. Determination of acceptance angle and numerical aperture of the given optical Fiber
- 7. Determination of rigidity modulus of a wire by torsional pendulum method
- 8. Determination of Young's modulus of a metal strip by single cantilever method.
- 9. Determination of Young's modulus of a material of the given bar by uniform bending
- 10. Determination of Fermi energy for a conductor.
- 11. Determination of resistivity by four probe method
- 12. Determination of Planck's constant using LEDs.
- 13. Determination of dielectric constant by RC charging and discharging method
- 14. Measurement of velocity of ultrasonic waves in a liquid using ultrasonic interferometer.
- 15. Determination of viscosity of castor oil by Stokes method
- 16. Determination of radius of curvature of the given plano convex lens by setting Newton's Rings
- 17. Step interactive physics simulations
- 18. Study of motion using spread Sheets
- 19. Application of Statistics using Spread Sheet
- 20. PHET Interactive Simulations

(https://phet.colorado.edu/en/simulations/filter?subjects=physics&type=html,prototype)

Course out comes:

At the end of the course the student will be able to :

- 1) Apply concepts of oscillations and analize suitability of Lasers for Engineering applications
- 2) Analize the suitability of optical fiber and concepts of acoustics for engineering applications
- 3) Apply the concepts of elasticity, radiometry and photometry for engineering applications
- 4) Apply concepts of shockwaves , natural hazards and safety precautions for engineering applications.

22UCV117C	Engineering Mechanics	03-Credits
Hrs/Week: 3:0:0		CIE Marks:50

Total Hours:	40 Hrs (4	(T 0
--------------	-----------	------

Develop students' ability

- 1 To analyse the problems involving concurrent forces.
- 2 To analyse moment and support reactions of rigid bodies.
- 3 To analyse the trusses for member forces.
- 4 To make students to learn the effect of friction on different planes.
- 5 To find out the centre of gravity and moment of inertia.

UNIT - I10 HrsIntroduction to Engineering Mechanics: Particle, continuum, rigid body, laws of motion, law of
parallelogram of forces, polygon law of forces, classification of force system, resolution and
composition of forces, principle of transmissibility of force. Resultant of co-planar concurrent
force system. Lami's theorem, equilibrium of a particle, Numerical problems.

Forces in Space: Resultant of non-coplanar concurrent forces. Equilibrium of non-coplanar concurrent forces. Numerical Problems.

UNIT – II10 HrsMoment and Couple: Definition of moment, moment of a couple, characteristics of a couple,
equivalent force and couple system, Varignon's principle, resultant of coplanar non concurrent
force system. Numerical problems.

Support Reaction: Types of beams, loads and supports. Support reaction of statically determinate beams subjected to various loads. Numerical problems.

UNIT - III10 HrsAnalysis of Trusses: Introduction, classification of trusses, analysis of plane perfect trusses by
themethod of joints and method of sections. Numerical examples.

Friction: Introduction, laws of Coulomb friction, equilibrium of blocks on horizontal plane & inclined plane and ladder friction. Numerical examples.

UNIT - IV

10 Hrs

Centroid of Plane areas: Introduction, locating the centroid of rectangle, triangle, circle, semicircle and quarter circle using method of integration and centroid of composite sections. Numerical examples.

Moment of Inertia of Plane areas: Introduction, moment of inertia, polar moment of inertia, radius of gyration, parallel and perpendicular axis theorem, moment of inertia of rectangle, triangle, circle, semicircle and quarter circle using method of integration. Moment of inertia of composite sections. Numerical examples.

- 8. Bhavikatti S. S., Engineering Mechanics, 2019, New Age International.
- 9. Reddy Vijaykumar K. and Suresh Kumar K., Engineering Mechanics, 2011, BS publication

Course Outcomes:

CO1: Analyse the resultant and equilibrium of concurrent forces.

CO2: Comprehend the action for forces, moments and other types of loads on rigid bodies and compute the reactive forces.

CO3: Analyse the frictional resistance offered by different planes.

CO4: Locate the centroid and compute the moment of inertia of plane areas.

- **CO1:** Explain the role of Mechanical Engineering w.r.t the emerging trends and technologies in various sectors, knowledge of various sources of energy and engineering materials
- CO2: Describe different conventional, advanced manufacturing systems and various metal joining processes
- **CO3:** Compute and analyze the performance of IC engines used in automobiles and concept of electric and hybrid vehicles for future mobility
- **CO4:** Enlighten about the fundamentals of Mechatronics, Robotics, Automation in industry and IOT

Course Outcomes	Prog	gram	me O	utcon	nes

22UEC114N		03-Credits
Hrs/Week: 3:0:0	Introduction to Electronics Engineering	CIE Marks:50
Total Hours: 40		SEE Marks:50

Course Objectives:

- 1) Understand the operation of semiconductor devices and their applications.
- 2) Know transistor (BJT) as an amplifier.
- 3) Study Op-Amps and its applications.
- 4) Know logic circuits and their optimization.
- 5) Understand the principles of transducers and communication systems.

UNIT - I

10 Hrs

Power Supplies –Block diagram, PN Junction Diode Characteristics, Half-wave rectifier, Full-wave rectifiers and filters, Voltage regulators, Output resistance and voltage regulation, Voltage multipliers.

BJT Characteristics and Biasing- Common Base and Common Emitter Configurations, Voltage Divider Biasing.

Self study component: Switched Mode Power Supply.

UNIT – II 10 Hrs Amplifier and Oscillators – Single Stage CE Amplifier, Barkhausen criterion, sinusoidal and non-sinusoidal oscillators, Ladder network oscillator, Wein bridge oscillator, Multivibrators, Single-stage astable oscillator, Crystal controlled oscillators (Only Concepts, working, and waveforms. No mathematical derivations) **Operational amplifiers** - Ideal op-amp; characteristics of ideal and practical op-amp; Practical op- amp circuits: Inverting and non-inverting amplifiers, voltage follower, summer, integrator, differentiator.(Text 1) **Self study component:** Op-Amp as zero crossing detector UNIT - III **10 Hrs** Boolean Algebra and Logic Circuits: Binary numbers, Number Base Conversion, octal & Hexa Decimal Numbers, Complements, Basic definitions, Axiomatic Definition of Boolean Algebra, Basic Theorems and Properties of Boolean Algebra, Boolean Functions, Canonical and Standard Forms, Other Logic Operations, Digital Logic Gates Combinational logic: Introduction, Design procedure, Adders- Half adder, Full adder, Parallel Adder Self study component: Half subtractor and full subtractor **UNIT - IV 10 Hrs** Analog Communication Schemes - Modern communication system scheme, Information source, and input transducer, Transmitter, Channel or Medium - Hardwired and Soft wired, Noise, Receiver, Multiplexing, Types of communication systems. Types of modulation (only concepts) – AM, FM. Digital Modulation Schemes: Advantages of digital communication over analog communication, ASK, FSK, PSK, Radio signal transmission Multiple access techniques. Sensors and Interfacing – Instrumentation and control systems, Transducers, Sensors. Self study component: Opto-couplers **Reference books:** 1) Mike Tooley, 'Electronic Circuits, Fundamentals & Applications', 4th Edition, Elsevier, 2015. 2) Digital Logic and Computer Design, M. Morris Mano, PHI Learning, 2008 ISBN-978-81-203-0417-84. 3) D P Kothari, I J Nagrath, 'Basic Electronics', 2nd edition, McGraw Hill Education (India), Private Limited, 2018 **Course Outcomes:** A student who successfully completes this course should be able to **CO1:** Differentiate semiconductor devices and their parameters based on V-I characteristics. **CO2:** Analyze the applications of electronic devices and circuits. CO3: Analyze logic circuits built with basic gates. **CO4:** Solve numerical problems related to basic electronic circuits and systems. **CO5:** Decide type of transducer, sensor and modulation for a given application.

22UCS120N	Introduction to C Programming	03-Credits
Hrs/Week: 2:0:2	Introduction to C Programming	CIE Marks:50
Total Hours: 40 Hrs (28 T+24 P)	(Integrated)	SEE Marks:50

- 1 Explain the basic architecture and functionalities of a Computer
- 2 Apply programming constructs of C language to solve the real-world problems
- 3 Explore user-defined data structures like arrays and structures in implementing solutions to problems
- 4 Design and Develop Solutions to problems using structured programming constructs such as functions and procedures

UNIT – I	08 Hrs
Basic Organization of a Computer, Steps in problem solving, Algorithms and	d Flowcharts with
examples. Overview of C: Features of C, Structure of C program, process	of compiling and
executing the C program.	

	Data types: Introduction, Character set, C token	
	es, Data types, Declaration of variables, Example pr	-
	: Arithmetic operators, Relational operators,	0 1
0 1	ent and Decrement operators, Conditional operator,	1
Special operators, Arithmetic	expressions, Evaluation of expressions, Precede	ence of arithmetic
operators, Type conversion in e	expressions, Operator precedence and Associativity	7.
	UNIT – II	06 Hrs
Managing Input and Out	put Operations: Formatted and Unformatted	input and output
statements.		
Decision making and Brancl	hing: Decision making with if, if-else, Nesting of	<i>if-else</i> statements,
else-if ladders, switch statemen	it, ?: Operator, <i>goto</i> statement.	
Decision making and Looping	g: while statement, do-while statement, for stateme	nt, jumps in loops.
	UNIT – III	06 Hrs
Arrays: Introduction, One di	mensional arrays, declaration and initialization of	of one-dimensional
-	s, declaration and initialization of two-dimensional	
on arrays.		• 1
•	ng and initializing string variables, String-handlin	g functions, Array
of String.		
	UNIT – IV	08 Hrs
User defined functions: Intro	oduction, Need for user-defined functions, a multi-	-function program,
	tion, Definition of functions, Return values and the	1 0
	Category of functions: Based on call by value,	• -
argument and return type and r	• •

22UEC134B		03-Credits
Hrs/Week: 3:0:0	Introduction to Embedded System	CIE Marks:50
Total Hours: 40		SEE Marks:50

- 1. To provide knowledge of embedded systems, applications, purpose and processor architectures.
- 2. To provide background knowledge of communication interfaces, characteristics and quality attributes of embedded systems.
- 3. To study general purpose processors software and processor peripherals.
- 4. To impart knowledge of 8051 Microcontroller, features and its applications.

UNIT - I	10 Hrs					
Introduction to embedded systems, Embedded system vs. general co	omputing system,					
Classifications, Purpose of embedded system, Major application areas. The typical embedded						
system, Microcontrollers, Microprocessors, RISC, CISC, Harvard and Von-Neumann, Big Endian,						
Little Endian processors.						
UNIT – II	10 Hrs					
Memory, Sensors, Actuators, Communication interface: Inter Integrated Interface, Serial Peripheral						

Memory, Sensors, Actuators, Communication interface: Inter Integrated Interface, Serial Peripheral interface, UART, Parallel interface, RS232 and Bluetooth. Characteristics and quality attributes of embedded systems.

UNIT - III

General purpose processors software: Introduction, Basic architecture, Operation, Instruction set, program and data memory space, registers, I/O, interrupts, Operating System, ASIP's, Microcontrollers, DSP, Selecting Microprocessor.

Standard Single Purpose Processors peripherals: Introduction, Timers, Counters and watch dog timers, UART.

UNIT - IV10 Hrs8051 Microcontroller: Introduction, Features of 8051 Microcontroller, Block diagram, ALU,
PC, ROM, RAM, Address line, Data line, Special function registers, RAM organization, Stack,
Basics of Serial Communication, Interrupts, Timers and counters, Input output ports, simple
pseudo code.Reference books:

- 1) Shibu K V, "Introduction to embedded systems", Tata McGraw Hill private limited, 2010.
- 2) Frank Vahid, Tony Givargis, "Embedded system design: A unified hardware/software introduction", John Wiley and Sons, 2001.
- **3**) Kenneth J Ayala, "The 8051 Microcontroller, Architecture programming and applications", West publishing company, college and school division, 1997.
- **4)** Rajkamal, "Embedded systems: architecture, programming and design", Tata McGraw Hill private limited, second edition.

Course Outcomes:

A student who successfully completes this course should be able to

- **CO1:** Gain comprehensive knowledge about embedded systems, major application area of embedded systems and processor architectures.
- **CO2:** Analyze communication interfaces, characteristics and quality attributes of embedded systems.
- **CO3:** Identify general purpose processors software and processor peripherals necessary for embedded systems.
- CO4: Explore 8051 Microcontroller capabilities and able to write pseudo codes.

22UEC135B	Introduction to Communication	03-Credits
Hrs/Week: 3:0:0	Technology	CIE Marks:50
Total Hours: 40	Teennology	SEE Marks:50

The objectives of the course are to

- 1. Know the fundamentals of different communication systems.
- 2. Understand modern communication techniques and their utility in modern cellular communication systems.
- 3. Know the design principles of cellular communication systems.
- 4. Understand the different communication standards.

UNIT – I	10 Hrs					
Introduction to communication systems: Elements of communication	systems, Need for					
modulation, Electromagnetic spectrum and applications, Terminologies in communication systems						
Introduction to wireless .communication systems: Evolution of mobile radio communication,						
Beginning of Radio, Wireless mobile communication, Applications of wireless communication,						
Disadvantages of wireless communication systems, Examples of wireless comm	Disadvantages of wireless communication systems, Examples of wireless communication systems,					
Difference between fixed telephone network and wireless telephone network	Difference between fixed telephone network and wireless telephone network, Development of					
wireless communication, Fixed network transmission hierarchy, Comparison of wireless						
communication systems						
UNIT – II	10 Hrs					
	1 (20)					

Modern communication systems: Introduction, First generation (1G), Second generation (2G), Generation (2.5G), Third generation (3G), Evolution from 2G to 3Gt, Fourth generation (4G), Digital cellular parameters, Differences between analog cellular and digital cellular systems,

wireless local loop (WLL), wireless local area networks (WLANs), Persona (PANs), Bluetooth	al Area Networks					
	ion International					
Introduction to cellular mobile systems: Introduction, Spectrum allocation, International telecommunication union (ITU), Wireless communication system, Basic components of cellular						
systems, Cellular system architecture, GSM: Most popular cellular system, type	e of channels, Cell					
concept in wireless communication, shape selection of the cell	10 11					
	10 Hrs					
Cellular system design fundamentals: Introduction, Frequency reuse, Cellular of	1 2 0					
parameters, channel assignment strategies, Hand-off strategies, Hands-off Initiation	, ,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,					
off on the basis of decision making process, channel assignment strategi	es for hands-off,					
Interference, Tracking, Trunking, Grade of service						
UNIT – IV	10 Hrs					
 Multiple access techniques for wireless communication: Introduction, Frequency Division Multiple Access (FDMA), Time Division Multiple Access (TDMA), Advanced TDMA, Multipath interference, Comparison between TDMA & FDMA, Space Division Multiple Access (SDMA), Spread spectrum, types of spread spectrum, Code Division Multiple Access (CDMA) Radio wave propagation: Introduction, Doppler shift, parameters of multipath channels, fading, diversity techniques, free space propagation model, Phenomenon of propagation, Propagation models Reference books: George Kennedy, Bernard Davis, S R M Prasanna, "Electronic Communication Systems", Tata 						
McGraw Hill Education Private Limited, New Delhi, 5 th Edition						
2).Rajeshwar Dass, "Wireless Communication Systems", I. K. international Publis	shing					
House Pvt. Ltd., New Delhi						
Course Outcomes:						
After completion of this course the students are able to						
CO1: Analyze different communication systems with respect to operation and util	ity.					
CO2: Choose suitable modulation technique for cellular mobile systems.						
CO3: Decide specific channel multiple access techniques for a communication ap	-					
CO4: Choose specific communication standards for a given communication applied	cation.

Hrs/Week: 3:0:0	Renewable Energy Sources	CIE Marks: 50
Total Hours: 40 Hrs (40 T+00 P)	Tene waste Energy Sources	SEE Marks: 50

- 1) To study energy scenario of solar, wind, biomass, geothermal and ocean energy conversion systems.
- 2) To explore various concepts and theory related to solar, wind, biomass, geothermal and ocean energy conversion systems.
- 3) To apply the principles and simple numerical problems of renewable energy conversion systems.
- 4) To illustrate the similarities and differences of the features of solar, wind, biomass, geothermal and ocean energy conversion systems.

UNIT – I	10 Hrs						
Introduction to Energy Sources:							
Classification of energy resources, conventional energy resources - availability and their							
limitations; non-conventional energy resources- classification, advantages, limitations;							
comparison of conventional and non-conventional energy resources.							
Solar Energy Basics:							
Introduction, solar constant, basic sun-earth angles - definitions and their representation	tion; solar radiation						
geometry, solar radiation data measuring instruments – Pyranometer and Pyrheliometer.							
UNIT – II	10 Hrs						
Solar Thermal Systems:							
Principle of conversion of solar radiation into heat, solar water heaters (Flat	plate collectors);						
solar cookers – box type, concentrating dish type; solar driers, solar still.							
Solar Electric Systems:							
Solar thermal electric power generation – solar pond and concentrating solar collector (parabolic trough,							
parabolic dish, central tower collector), advantages and disadvantages; solar photow							
fundamentals, module, panel and array; solar PV systems - street lighting, domestic ligh	ting and solar water						
pumping systems

22UCV138B		03-Credits
Hrs/Week: 3:0:0	Green Building	CIE Marks:50
Total Hours: 40 Hrs (40 T)		SEE Marks:50

- 1) Understand the Definition, Concept & Objectives of the terms cost effective construction and green building. Apply cost effective techniques in construction.
- 2) Apply cost effective Technologies and Methods in Construction
- 3) Understand the Problems due to Global Warming
- 4) State the Concept of Green Building
- 5) Understand Green Building

UNIT - I

10 Hrs

Introduction to the concept of cost effective construction

Uses of different types of materials and their availability -Stone and Laterite blocks- Burned Bricks-Concrete Blocks- Stabilized Mud Blocks- Lime Poszolana Cement- Gypsum Board- Light Weight Beams- Fiber Reinforced Cement Components- Fiber Reinforced Polymer Composite- Bamboo-Availability of different materials- Recycling of building materials – Brick- Concrete- Steel-Plastics - Environmental issues related to quarrying of building materials

UNIT – II

10 Hrs

Environment friendly and cost effective Building Technologies

Different substitute for wall construction Flemish Bond - Rat Trap Bond – Arches – Panels - Cavity Wall - Ferro-Cement and Ferro-Concrete constructions – different pre-cast members using these materials - Wall and Roof Panels – Beams – columns - Door and Window frames - Water tanks - Septic Tanks - Alternate roofing systems - Filler Slab - Composite Beam and Panel Roof -Pre-engineered and ready to use building elements - wood products - steel and plastic - Contributions of agencies - Costford - Nirmithi Kendra – Habitat.

Global Warming

Definition - Causes and Effects - Contribution of Buildings towards Global Warming - Carbon Footprint – Global Efforts to reduce carbon Emissions Green Buildings – Definition - Features-Necessity – Environmental benefit - Economical benefits - Health and Social benefits - Major Energy efficient areas for buildings – Embodied Energy in Materials Green Materials - Comparison of Initial cost of Green V/s Conventional Building - Life cycle cost of Buildings.

UNIT - III	10 Hrs
Green Building rating Systems	
BREEAM – LEED - GREEN STAR -GRIHA (Green Rating for Integrated Habit	at Assessment) for

new buildings – Purpose - Key highlights - Point System with Differential weight age. Green

Design – Definition - Principles of sustainable development in Building Design - Characteristics of Sustainable Buildings – Sustainably managed Materials - Integrated Life cycle design of Materials and Structures (Concepts only)

UNIT - IV

10 Hrs

Utility of Solar Energy in Buildings

Utility of Solar energy in buildings concepts of Solar Passive Cooling and Heating of Buildings. Low Energy Cooling. Case studies of Solar Passive Cooled and Heated Buildings.

Green Composites for Buildings

Concepts of Green Composites. Water Utilisation in Buildings, Low Energy Approaches to Water Management. Management of Solid Wastes. Management of Sullage Water and Sewage. Urban Environment and Green Buildings. Green Cover and Built Environ

Reference books:

- 1. K. S Jagadish, B. V. Venkataramana Reddy, K. N Nanjundarao "Alternative Building Materials and Technologies", New Age International Publishers.
- 2. G Harihara Iyer, "Green Building Fundamentals", Notion Press.

3. Dr. Adv. Harshul Savla, "Green Building: Principles & Practices", Notion Press.

Course Outcomes:

CO1: Select different building materials for cost effective construct

CO2: Apply effective environmental friendly building technology to reduce global

CO3: Analyse buildings for green ratin

CO4: Use alternate source of energy and effect

Course Outcomes	Programme Outcomes

22UCV139B		03-Credits
Hrs/Week: 3:0:0	Waste Management	CIE Marks:50
Total Hours: 40 Hrs (40 T)		SEE Marks:50

- 1) To learn broader understandings on various aspects of solid waste management.
- 2) To learn collection, storage, transport, processing, and disposal of waste
- 3) To learn identification, management and treatment of hazardous waste

UNIT – II

UNIT - I	10 Hrs
INTRODUCTION TO SOLID WASTE MANAGEMENT:	

10 Hrs

Classification of solid wastes (source and type based), solid waste management (SWM), elements of SWM, ESSWM (environmentally sound solid waste management) and EST (environmentally sound technologies), factors affecting SWM, Indian scenario, progress in MSW (municipal solid waste) management in India.

WASTE GENERATION ASPECTS:

Waste stream assessment (WSA), waste generation and composition, waste characteristics (physical and chemical), health and environmental effects (public health and environmental), comparative assessment of waste generation and composition of developing and developed nations, a case study results from an Indian city, handouts on solid waste compositions.

 UNIT - III
 10 Hrs

 COLLECTION, STORAGE, TRANSPORT, PROCESSING TECHNIQUES AND
 DISPOSAL OF

 WASTES:
 Image: Constraint of the second second

Waste Collection, Storage and Transport: Collection components, storagecontainers/collection vehicles, collection operation, transfer station, waste collection system design, record keeping, control, inventory and monitoring, implementing collection and transfer system, a case study. Waste Disposal: key issues in waste disposal, disposal options and selection criteria, sanitary landfill, landfill gas emission, leachate formation, environmental effects of landfill, landfill operation issues.

Waste Processing Techniques: Purpose of processing, mechanical volume and size reduction, component separation, drying and dewatering.

UNII - IV	10 Hrs
SOURCE REDUCTION, REUSE, PRODUCT RECOVERY & RECYCLING:	
Source Reduction, Reuse, Product Recovery and Recycling: basics, purpose,	implementation

Source Reduction, Reuse, Product Recovery and Recycling: basics, purpose, implementation monitoring and evaluation of source reduction, Reuse, significance of recycling, planning of a recycling programme, recycling programme elements, commonly recycled materials and processes, recovery of waste materials, a case study.

HAZARDOUS WASTE MANAGEMENT AND TREATMENT:

Identification and classification of hazardous waste, hazardous waste treatment, pollution prevention and waste minimization, hazardous wastes management in India.

Reference books:

- 1. Tchobaanoglous, G., Theisen, H., and Samuel A Vigil, Integrated Solid Waste Management, McGraw-Hill Publishers, 1993.
- 2. Bilitewski B., Hard He G., Marek K., Weissbach A., and Boeddicker H., Waste Management, Springer, 1994.
- 3. White, F. R., Franke P. R., & Hindle M., Integrated solid waste management: a life cycle inventory. McDougall, P. John Wiley & Sons. 2001
- 4. Nicholas, P., & Cheremisinoff, P. D., Handbook of solid waste management and waste minimization technologies, Imprint of Elsevier Science. 2005

Course Outcomes:

CO1: Apply the basics of solid waste management towards sustainable development

CO2: Study the composition and characteristics of the waste and its affect on the environment

CO3: Apply technologies to process waste and dispose the same.

CO4: Study the 4Rs, management and treatment of the hazardous waste.

22UCS140B	Introduction to Internet of Things (IoT)	03-Credits
Hrs/Week: 3:0:0	Introduction to Internet of Things (IoT)	CIE Marks:50
Total Hours: 40 Hrs		SEE Marks:50

- 1. Understand about the fundamentals of Internet of Things and its building blocks along with their characteristics.
- 2. Understand the recent application domains of IoT in everyday life.
- 3. Gain insights about the current trends of associated IOT technologies and IOT Analytics. LINIT - I

UNIT - I Basics of Networking: Introduction, Network Types, Layered network models Emergence of IoT: Introduction, Evolution of IoT, Enabling IoT and the Complex of Technologies, IoT Networking Components	10 Hrs
Emergence of IoT: Introduction, Evolution of IoT, Enabling IoT and the Complex	
	x Interdependence
Reference book 1: Chapter 1- 1.1 to 1.3 Chapter $4 - 4.1$ to 4.4	10 11
UNIT – II	10 Hrs
IoT Sensing and Actuation: Introduction, Sensors, Sensor Characteristics, Sen Sensing Types, Sensing Considerations, Actuators, Actuator Types, Actuator Chara Textbook 1: Chapter $5 - 5.1$ to 5.9 IoT Processing Topologies and Types: Data Format, Importance of Processing Topologies, IoT Device Design and Selection Considerations, Processing Offloadin Defenses hash by Chapter 6 - 6.1 to 6.5	in IoT, Processing
Reference book 1: Chapter 6 – 6.1 to 6.5	10 11
UNIT - III ASSOCIATED IOT TECHNOLOGIES	10 Hrs
Cloud Computing: Introduction, Virtualization, Cloud Models, Service-Level Ag Computing, Cloud Implementation, Sensor-Cloud: Sensors-as-a-Service. Textbook 1: Chapter 10– 10.1 to 10.6 IOT CASE STUDIES Agricultural IoT – Introduction and Case Studies Reference book 1:Chapter 12- 12.1-12.2	,
UNIT - IV	10 Hrs
IOT CASE STUDIES AND FUTURE TRENDS	10 1115
Vehicular IoT – Introduction	
Healthcare IoT – Introduction, Case Studies	
IoT Analytics – Introduction	
Reference book 1: Chapter 13– 13.1; Chapter 14- 14.1-14.2; Chapter 17- 17.1	
Reference books:	
 Sudip Misra, Anandarup Mukherjee, Arijit Roy, "Introduction to IoT", Can Press 2021. 	nbridge University
 S. Misra, C. Roy, and A. Mukherjee, 2020. Introduction to Industrial Inter Industry 4.0. CRC Press. 	_

22UBT148B		03-Credits
Hrs/Week: 3:0:0	Biomass and Bioenergy	CIE Marks:50
Total Hours: 40 Hrs (40 T)		SEE Marks:50

- 1. To understand the basic concepts of biomass and bioenergy.
- 2. To gain the knowledge about different biomass conversion technologies.
- 3. To know about innovative bioenergy plants and bio refinery concept.

UNIT - I 10 Hrs	
	10 Hrs

Biomass

Biomass: Definition, constituents and energy properties. Biomass as an energy core and its different mode of utilization. Biomass typologies: lignocellulosic, starchy, sugary, oilseeds, MSW, sewage sludge.

Introduction to Biofuels - definition (liquid -biodiesel, bioethanol; gaseous -syngas, biogas; solid -
charcoal and biochar), advantages and disadvantages. Biofuel life cycle. Conventional fuels and
their environmental impacts. Renewable energy sources. Modern fuels and their environmental
impacts.UNIT – II10 Hrs

First generation, Second generation, third generation and next/future generation fuels Biomass Conversions Technologies:

Physical conversion: Dewatering, drying, size reduction, steam explosion, densification, pelleting, chipping, oil extraction.

Thermochemical conversion: Oil trans-esterification

Chemical conversion: Lignocellulosic conversion (2G technology)

Biochemical conversion - Anaerobic digestion (biogas production from organic waste and

UNIT - III

Waste water), CBG. Fermentation (bioethanol production)

10	Hrs	

Thermal conversion:

Combustion plants for heat generation: wood and pellet burning stoves; wood, pellet and wood chips boiler. Gasification plants, Pyrolysis plants.

Innovative bioenergy plants: biomass to synthetic natural gas; biomass to liquid biofuels through Fisher- Tropsch; absorption enhanced reforming. Hydrothermal processes: carbonization, Liquefaction, gasification.

UNIT - IV

10 Hrs

Bio-Energy and Bio-Refinery

Overview of Integrated biorefinery concept, value-added processing of bioenergy residues.

Economic feasibility of producing bioenergy (with one example), Issues with bioenergy production & use. Impact of bioenergy in global climate change & food production. Strategies for new vehicle technologies. Current research on biomass & bioenergy production. Market barriers of bioenergy.

Reference books:

- 1. Anaerobic Biotechnology for Bioenergy Production: Principles and Applications. Samir K. Khanal. Wiley-Blackwell Publishing, 2008.
- 2. Biotechnology, Economic & Social Aspects: E.J. Dasilva, C Ratledge & A Sasson, Cambridge Univ. Press, Cambridge, 2000
- 3. Environmental Biotechnology by Pradipta Kumar Mahopatra, 2007.
- 4. Biofuel Engineering Process technology by Caye M. Drapcho, Nghiem Phu Nhuan, Terry H.

Walker, Mc Grow Hill company, 2008.

5. Biofuel Technology Handbook by Dominik Rutz & Rainer Janssen, 2008.

Course Outcomes:

CO1: Emphasize on the basic aspects of Biomass and Bio-Energy.

CO2: Interpret & describe biomass conversion technologies.

CO3: Acquire knowledge of Innovative bioenergy plants.

CO4: Interpret & describe of Bio-Refinery concept.

Course Outcomes	Programme Outcomes

22UHS124C		01-Credit
Hrs/Week: 1:0:0	Communicative English	CIE Marks:50
Total Hours: 15 Hrs (L 15)		SEE Marks:50

- 1.To know about Fundamentals of Communicative English and Communication Skills in general.
- 2. To train the students identify the nuances of phonetics, intonation and enhance pronunciation skills for better Communication skills.
- 3. To impart basic English grammar and essentials of important language skills.
- 4. To enhance with English vocabulary and language proficiency for better communication skills.
- 5. To learn about Techniques of Information Transfer through presentation.

UNIT - I	3 Hrs
Introduction to Communication Skills: Fundamentals of Communicative E	English, Process of
Communication, Barriers to Effective Communicative English, Different st	yles and levels in
Communicative English. Interpersonal and Intrapersonal Communication Skills.	-
UNIT – II	4 Hrs
Introduction to Phonetics: Phonetics& its importance, Phonetic Transcript Guidelines Related to consonants and vowels, Sounds Mispronounced, Silent and Syllables&Structure, Word Accent and Stress Shift, Intonation, Spelling Rules & spelt. Common Errors in Pronunciation. Basic English Grammar and Vo I: Introduction toEnglish Grammar, Parts of Speech.	l Non silent Letters, & Words often Miss
UNIT - III	4 Hrs
Basic English Grammar and Vocabulary PART - II: Articles & Preposition, k	kinds of Preposition
and Prepositions often Confused. Articles: Use of Articles - Indefinite and Defin	nite Articles, Verbs
&Tenses, Types of tenses, Question Tags, Question Tags for Assertive Senter	nces (Statements) -
Some Exceptions in Question Tags. One Word Substitutes. Strong and Weak form	ns of words, Words
	,
formation - Prefixes and Suffixes, Contractions and Abbreviations.	,
	4 Hrs

- 1. A Textbook of English Language Communication Skills, Infinite Learning Solutions(Revised Edition) 2021.
- 2. Sanjay Kumar and Pushpalata'Communication Skills', Oxford University Press 2019.
- 3. N. P. Sudharshana and C. Savitha, 'English for Engineers', Cambridge University Press 2018.
- 4. D Praveen Sam, KN Shoba, 'A Course in Technical English', Cambridge University Press 2020.
- 5. Gajendra Singh Chauhan and Et al, 'Technical Communication', Cengage learning India Pvt Limited [Latest Revised Edition] 2019.
- English Language Communication Skills Lab Manual cum Workbook, Cengage learning India Pvt Limited [Latest Revised Edition] – 2019.

Course Outcomes:

At the end of the course student will be able to:

CO1: Apply the Fundamentals of communication in their communication skills

CO2: Identify the nuances of phonetics, intonation and enhance pronunciation skills. **CO3:** Practice Basic English grammar skills and utilize essential language skills as per requirement.

CO4: Build and use all types of English vocabulary and language proficiency. **CO5:** Solve the hindrances faced by (MTI) - Mother Tongue Influence

22UHS128C		01-Credit
Hrs/Week: 1:0:0	Scientific Foundations of Health	CIE Marks:50
Total Hours: 15Hrs (L 15)		SEE Marks:50

To know about Health and wellness (and its Beliefs) & It's balance for positive mindset.
 To Build the healthy lifestyles for good health for their better future.

To Create a Healthy and caring relationships to meet the requirements of good/social/positive life.
 To learn about avoiding risks and harmful habits in their campus and outside the campus for their

bright future.

5. To Prevent and fight against harmful diseases for good health through positive mindset.

UNIT - I	4Hrs
Good Health and Its balance for positive mindset: What is Health? Health and	Behaviour.
Health and Personality - Profession: Disparities of health in different vulnerable	e groups. Stress and
Health - Stress management.	
UNIT – II	4Hrs
Building of healthy lifestyles for better future: Developing a healthy diet for	good health, Fitness
components for health, Wellness and physical function, Howto avoid exercise inj	uries?
Creation of Healthy and caring relationships: Building communication sk	cills (Listening and
speaking), Changing health behaviours through social engineering.	
UNIT - III	4Hrs
Avoiding risks and harmful habits: Characteristics of heal	th compromising
behaviors, Recognizing and avoiding of addictions, Effects and health hazards fr	om addictions Such
as how to recovery from addictions.	
UNIT - IV	3Hrs
Preventing and fighting against diseases for good health: Process of infection	s and reasons for it,
Management of chronic illness for Quality of life, Health and Wellness of youth.

22UMA202C	Mathematics for Civil Sciences-II	04-Credits
Hrs/Week: 3:0:2	(Integrated)	CIE Marks:50
Total Hours: 40 Hrs	(Integrated)	SEE Marks:50

Course Objectives: The goal of the course Mathematics for Civil Sciences-II is to

- 1. **Familiarize** the importance of Integral calculus and Vector calculus essential for civil Engineering.
- 2. Analyze Civil engineering problems by applying Partial Differential Equations.
- 3. Develop the knowledge of solving civil engineering problems numerically.

UNIT – I	10 Hrs
Introduction to Integral Calculus in Civil Engineering applications :	
Multiple Integrals: Evaluation of double and triple integrals, evaluation of do	ouble integrals by
change of order of integration, changing into polar coordinates. Applications	to find Area and
Volume by double integral. Problems.	
Beta and Gamma functions: Definitions, properties, relation between Beta and G	amma functions.
Problems.	
Self-Study: Volume by triple integration, Center of gravity.	
Applications: Applications to mathematical quantities (Area, Surface area, Volum	ne), Analysis of
probabilistic models.	
(RBT Levels: L1, L2 and L3)	
UNIT – II	10 Hrs
Introduction to Vector Calculus in Civil Engineering applications:	
 Vector Differentiation: Scalar and vector fields. Gradient, directional der divergence - physical interpretation, solenoidal and irrotational vector fields. Problematic Vector Integration: Line integrals, Surface integrals. Applications to work done Flux. Statement of Green's theorem and Stokes theorem. Problems. Self-Study: Volume integral and Gauss divergence theorem. Applications: Heat and mass transfer, oil refinery problems, environmental enging of streamlines, velocity and acceleration of a moving particle. (RBT Levels: L1, L2 and L3) 	lems. ne by a force and
UNIT – III	10 Hrs
Importance of partial differential equations for Civil Engineering application	
Formation of PDE's by elimination of arbitrary constants and functions. A homogeneous, PDE by direct integration. Homogeneous PDEs involving derivative one independent variable only. Solution of Lagrange's linear PDE. Derivation of heat equation and wave equation. Self-Study: Solution of one-dimensional heat equation and wave equation b separation of variables. Applications: Design of structures (vibration of rod / membrane) (RBT Levels: L1, L2 and L3)	ves with respect to f one-dimensional
UNIT – IV	10 Hrs
Introduction to various numerical techniques for handling Civil Engineering	
Solution of algebraic and transcendental equations: Regula-Falsi and Newton- (only formulae). Problems. Finite differences, Interpolation using Newton's forw difference formulae, Newton's divided difference formula and Lagrange's inte (All formulae without proof). Problems.	Raphson methods ard and backward

differential equations of first order and first degree - Taylor's series method, Modified Euler'smethod, Runge-Kutta method of fourth order and Milne's predictor-corrector formula (No derivations of formulae). Problems.

Self-Study: Bisection method, Lagrange's inverse Interpolation and Adam-Bashforth method.

Applications: Estimating the approximate roots, extremum values, Area, volume, and surface area. Finding approximate solutions to civil engineering problems. Finding approximate solutions to ODE related to civil engineering fields.

(RBT Levels: L1, L2 and L3)

Course Outcomes: At the end of the course the student will be able to:

CO1: Apply the knowledge of multiple integrals to compute area and volume.

CO2: Understand the applications of vector calculus refer to solenoidal, irrotational vectors, line integral and surface integral.

CO3: Demonstrate partial differential equations and their solutions for physical interpretations.

CO4: Apply the knowledge of numerical methods in solving physical and engineering phenomena.

Course Outcomes	Prog	gram	me O	utcon	nes							
	1	2	3	4	5	6	7	8	9	10	11	12
C01	3	2	0	0	0	0	0	0	0	0	0	0
CO2	3	2	0	0	0	0	0	0	0	0	0	0
CO3	3	2	0	0	0	0	0	0	0	0	0	0
CO4	3	2	0	0	0	0	0	0	0	0	0	0

- 1) To enable students to acquire knowledge on principles of chemistry for engineering applications.
- 2) To develop an intuitive understanding of chemistry by emphasizing the related branches of engineering.
- 3) To provide students with a solid foundation in analytical reasoning required to solve societal problems.

10 Hrs

10 Hrs

	UNIT - I
Chemistry of Water and Environme	ent

Water technology: Introduction, water quality parameters, hardness of water, determination of total hardness by EDTA method, numerical problems. Determination of chlorides; Mohr's method. Softening of water by ion exchange method, desalination of water by electrodialysis, Reverse and Forward osmosis: Introduction, Process and applications.

Water pollution: Sources, water quality assessment, effect of oxygen demanding waste water, Sewage treatment; Primary, secondary and tertiary treatment. Determination of Biological Oxygen Demand (BOD), Chemical oxygen demand (COD) and Numerical problems.

Self Study: Determination of DO in water samples by Winkler's method. Impact of heavy metals on human health.

UNIT – II	

Analytical Techniques and Corrosion Science

Analytical Techniques: Sensors, Introduction, basic principle of sensor, Types of sensors; Conductometric sensors, Electrochemical sensors, Thermometric sensors, and Optical sensors. Potentiometric sensors; Introduction, principle, working and application in the estimation of iron. Colorimetric sensors; Introduction, principle, working and application in the estimation of copper. Conductometric sensors; Introduction, principle, working and application in the estimation of weak acid. pH-sensors and its application in the determination of soil sample.

Corrosion: Introduction, electrochemical theory of corrosion, types of electrochemical corrosion; differential metal corrosion, differential aeration corrosion (waterline and pitting), stress corrosion (caustic embrittlement). Factors affecting rate of corrosion. Corrosion testing by weight loss method. Corrosion penetration rate (CPR)-numerical problems.

Corrosion control: Introduction, Metal coating; galvanization, Surface conversion coating; anodization and cathodic protection; sacrificial anodic method.

 Self Study: Use of Corrosion inhibitors to control corrosion. Corrosion control by organic coatings.

 UNIT - III
 10 Hrs

Structural Materials

Metals and Alloys: Introduction, Properties and application of Iron and its alloys, Aluminium and itsalloys.

Cement: Introduction, composition, properties, classification, manufacturing process of cement, processof setting and hardening of cement, additives for cement and testing of cement.

Refractories: Introduction, classification based on chemical composition, properties and application of refractory materials.

Glass: Introduction, Composition, Types, Preparation of Soda-lime glass, properties and applications of glass.

Nano materials: Introduction, size dependent properties of nanomaterial (surface area and catalytic), Synthesis of nanomaterial by sol-gel method and co-precipitation method. Synthesis, properties and engineering applications of carbon nanotubes and graphene. Nanomaterials for water treatment, Introduction and example.

Self Study: Chemistry of reinforced concrete from various sources of water (seawater, groundwater, treated water).

10 Hrs

Polymers and Composites

Polymer: Introduction, monomer, polymer, polymerization, degree of polymerization. Molecular weight of polymers, Weight average and number average molecular weight of polymer. Numerical problems. Synthesis, properties and engineering applications of Acrylo Butadiene Styrene (ABS) plastics and Silicon rubber.

Fibers: Introduction, Synthesis, properties and applications of Rayon and Nylon fibers.

UNIT - IV

Polymer composites: Introduction, properties and applications of fiber reinforced polymers composites (FRPC).

Geo polymer concrete: Introduction, synthesis, constituents, properties & applications.

Adhesives: Introduction, properties and applications of epoxy resin

Biodegradable polymers: Introduction, Synthesis, properties and applications of polylactic acid (PLA) and poly hydroxy butyrate (PHB).

Self Study: Introduction, structural properties and applications of cellulose and lignin.

PRACTICAL CONTENT

List of Experiments

UNIT-I : Compulsorily conducting experiments

- 1. Estimation of total hardness of water by EDTA method
- 2. Potentiometric estimation of FAS using K2Cr₂O₇
- 3. Determination of pKa of vinegar using pH sensor (Glass electrode)
- 4. Estimation of Copper present in electroplating effluent by optical sensor (colorimetry)
- 5. Conductometric estimation of acid mixture
- 6. Estimation of iron in TMT bar by diphenyl amine/external indicator method
- 7. Determination of Alkalinity of given water sample by dual indicator method.
- 8. Determination of Viscosity coefficient of lubricant (Ostwald's viscometer)

UNIT-II: Virtual experiments (any one)

- 1. Electro-gravimetric estimation of metals
- 2. Preparation of urea formaldehyde resin
- 3. Synthesis of iron oxide nanoparticles
- 4. Electrolysis of water

UNIT-III: Open Ended Experiments (any one)

- 1. Measurements of IV characteristics of Photovoltaic Cell
- 2. Determination of percentage of copper in present the brass solution.
- 3. Determination of CaO in cement solution
- 4. Determination of manganese dioxide in pyrolusite ore

Course Outcomes:

CO1: Identify the terms and process involved in scientific and engineering applications. **CO2:** Explain the phenomena of chemistry to describe the methods of engineering process. **CO3:** Solve for the problems in chemistry that are per pertinent in engineering applications **CO4:** Apply the basic concepts of chemistry to explain the chemical properties and process. **CO5:** Analyze properties & processes associated with chemical substances in multidiscipline.

CO5: Analyze properties & processes associated with chemical substances in multidisciplinary situations.

22UME223C		03 - Credits
Hrs./Week: 2 :0: 2	Computer Aided Engineering Drawing	CIEMarks:50
TotalHours:40		SEEMarks:50

UNIT-I	10Hrs.
Introduction: Significance of engineering drawing, BIS Conventions of Engineering D	rawing. Free
hand sketching of Engineering Drawing. Introduction to Computer Aided Drafting so	oftware, Co-
ordinate system and reference planes HP, VP, and RPP & LPP of 2D/3D environment.	Selection of
drawing sheet size and scale. Commands and creation of Lines, coordinate points, axe	es, polylines,
square, rectangle, polygons, splines, circles, ellipse, text, move, copy, off-set, mirror,	rotate, trim,
extend, break, chamfer, fillet and curves.	
Orthographic Projections of Points and Lines:	
Introduction to Orthographic projections: Orthographic projections of points in 1 st and 3	3 rd quadrants
(for practice only, not for CIE and SEE).	
Projections of lines located in first quadrant only, line parallel to both the planes, perpendent	
plane and parallel to other, inclined to one plane and parallel to other, inclined to both	n the planes.
Determinations of true length and true inclinations with principal planes.	
UNIT–II	10Hrs.
Orthographic Projections of planes:	10Hrs.
Orthographic Projections of planes:	pendicular to
Orthographic Projections of planes: Projections of planes- perpendicular to the both the planes, parallel to one plane and perp	pendicular to

Orthographic Projections of planes: Projections of planes- perpendicular to the both the planes, parallel to one plane and perpendicular to other and inclined to both the planes.(Pl quadrant only using change of position method). UNIT-III Orthographic Projections of solids Orthographic Projection of right regular solids (Solids Resting on HP only): Prisms, Pyra	pendicular to aced in First 10 Hrs. mids, Cones,
Orthographic Projections of planes: Projections of planes- perpendicular to the both the planes, parallel to one plane and perpendicular to other and inclined to both the planes.(Pl quadrant only using change of position method). UNIT–III Orthographic Projections of solids Orthographic Projection of right regular solids (Solids Resting on HP only): Prisms, Pyra and Cylinders (triangle, square, rectangle, pentagon, and hexagon) with axis/base incline	pendicular to aced in First 10 Hrs. mids, Cones,

base on HP only

UNIT-IV

10Hrs.

Orthographic Projections of solids:

Orthographic Projection of right regular solids (Solids Resting on HP only): Prisms, Pyramids, Cones, and Cylinders (triangle, square, rectangle, pentagon, and hexagon) with axis/base inclined to HP and profile views.

Development of Lateral Surfaces of Solids:

Development of Lateral Surfaces of right regular prisms, pyramids, cylinders and cones resting with base on HP only

Scheme and Solution for Examinations

Continuous Internal Evaluation (Theory) (Using grid sheet)

CIE	Max Marks	Reduced Marks
1	40 Marks	20 Marks
2	40 Marks	20 Marks
	Assignment	10 Marks

Reduced to 50% of Marks 25 Marks

Continuous Internal Evaluation (Practical)

Particulars	Max Marks	Reduced Marks		
Lab work	30 Marks	15 Marks		
Lab CIE	20 Marks	10 Marks		
		25 Marks		

Total Marks: CIE (Theory + Practical)

Sketching	Practical	Total
25 Marks	25 Marks	50 Marks

SEMESTER END EXAMINATION

The Lab-SEE of three hours is conducted as per the model question paper for 100 marks and scaled down to 50 Marks. 50%weightage for sketch and 50% weightage for printouts in both CIE and SEE. QUESTION PAPER FORMAT AWARD OF MARKS

	QI	No.	Question		Marks	
		1	Straight line OR Planes	S	30 Marks	
		2	Solids		40 Marks	
		3	Developmen Surfaces OR Isometric P		30 Marks

 R.K.Hegde and Niranjan Murthy, "Engineering Graphics"^{1st} edition, Sapna, 2003.

4) P.I.Varghese, "Engineering Graphics", McGraw Hill, 2013

Course Outcomes:

At the end of the course the student will be able to:

- **CO 1:** Draw and communicate the objects
- **CO 2:** Draw and communicate the objects with definite shape and dimensions
- **CO 3:** Recognize and Draw the shape and size of objects through different views. Develop the lateral surfaces of the object
- **CO 4:** Create a Drawing views using CAD software Identify the interdisciplinary engineering components or systems through its graphical representation.

22UEC214N	Introduction to Electronics Engineering	03-Credits
Hrs/Week: 3:0:0	Introduction to Electronics Engineering	CIE Marks:50
Total Hours: 40		SEE Marks:50

- 1) Understand the operation of semiconductor devices and their applications.
- 2) Know transistor (BJT) as an amplifier.
- 3) Study Op-Amps and its applications.
- 4) Know logic circuits and their optimization.
- 5) Understand the principles of transducers and communication systems.

UNIT - I **10 Hrs Power Supplies** –Block diagram, PN Junction Diode Characteristics, Half-wave rectifier, Full-wave rectifiers and filters, Voltage regulators, Output resistance and voltage regulation, Voltage multipliers. BJT Characteristics and Biasing- Common Base and Common Emitter Configurations, Voltage Divider Biasing. Self study component: Switched Mode Power Supply. 10 Hrs UNIT – II Amplifier and Oscillators - Single Stage CE Amplifier, Barkhausen criterion, sinusoidal and non-sinusoidal oscillators, Ladder network oscillator, Wein bridge oscillator, Multivibrators, Single-stage astable oscillator, Crystal controlled oscillators (Only Concepts, working, and waveforms. No mathematical derivations) Operational amplifiers - Ideal op-amp; characteristics of ideal and practical op-amp; Practical op- amp circuits: Inverting and non-inverting amplifiers, voltage follower, summer, integrator, differentiator.(Text 1) **Self study component:** Op-Amp as zero crossing detector 10 Hrs UNIT - III Boolean Algebra and Logic Circuits: Binary numbers, Number Base Conversion, octal & Hexa Decimal Numbers, Complements, Basic definitions, Axiomatic Definition of Boolean Algebra, Basic Theorems and Properties of Boolean Algebra, Boolean Functions, Canonical and Standard Forms, Other Logic Operations, Digital Logic Gates Combinational logic: Introduction, Design procedure, Adders- Half adder, Full adder, Parallel Adder Self study component: Half subtractor and full subtractor UNIT - IV 10 Hrs Analog Communication Schemes – Modern communication system scheme, Information source, and input transducer, Transmitter, Channel or Medium - Hardwired and Soft wired, Noise, Receiver, Multiplexing, Types of communication systems. Types of modulation (only concepts) - AM, FM. **Digital Modulation Schemes:** Advantages of digital communication over analog communication, ASK, FSK, PSK, Radio signal transmission Multiple access techniques.

Sensors and Interfacing – Instrumentation and control systems, Transducers, Sensors. **Self study component:** Opto-couplers

- 3) D P Kothari, I J Nagrath, 'Basic Electronics', 2nd edition, McGraw Hill Education (India), Private Limited, 2018

Course Outcomes:

A student who successfully completes this course should be able to

CO1: Differentiate semiconductor devices and their parameters based on V-I characteristics.

CO2: Analyze the applications of electronic devices and circuits.

CO3: Analyze logic circuits built with basic gates.

CO4: Solve numerical problems related to basic electronic circuits and systems.

CO5: Decide type of transducer, sensor and modulation for a given application.

22UCS220N		03-Credits
Hrs/Week: 2:0:2	Introduction to C Programming	CIE Marks:50
Total Hours: 40 Hrs (28 T+24 P)		SEE Marks:50

- 1 Explain the basic architecture and functionalities of a Computer
- 2 Apply programming constructs of C language to solve the real-world problems
- 3 Explore user-defined data structures like arrays and structures in implementing solutions to problems
- 4 Design and Develop Solutions to problems using structured programming constructs such as functions and procedures

	00 11						
UNIT – I	08 Hrs						
Basic Organization of a Computer, Steps in problem solving, Algorithms and Flowcharts with							
examples. Overview of C: Features of C, Structure of C program, process of compiling and							
executing the C program.							
Constants, Variables and Data types: Introduction, Character set, C tokens, Keywords and							
Identifiers, Constants, Variables, Data types, Declaration of variables, Example programs.							
Operators and Expressions: Arithmetic operators, Relational operators, I							
Assignment operators, Increment and Decrement operators, Conditional operator,	Bitwise operators,						
Special operators, Arithmetic expressions, Evaluation of expressions, Precede	ence of arithmetic						
operators, Type conversion in expressions, Operator precedence and Associativity	•						
UNIT – II	06 Hrs						
Managing Input and Output Operations: Formatted and Unformatted	input and output						
statements.							
Decision making and Branching: Decision making with if, if-else, Nesting of	<i>if-else</i> statements,						
else-if ladders, switch statement, ?: Operator, goto statement.							
Decision making and Looping: while statement, do-while statement, for statement	nt, jumps in loops.						
UNIT – III	06 Hrs						
Arrays: Introduction, One dimensional arrays, declaration and initialization o	f one-dimensional						
arrays, Two dimensional arrays, declaration and initialization of two-dimensional	arrays. Operations						
on arrays.							
Strings: Introduction, Declaring and initializing string variables, String-handling	g functions, Array						
of String.							
UNIT – IV	08 Hrs						
User defined functions: Introduction, Need for user-defined functions, a multi-	function program,						
Elements of user defined function, Definition of functions, Return values and the	eir types, Function						
calls, Function declaration. Category of functions: Based on call by value,	• •						
argument and return type and recursion.	2						
Structures and Unions: Defining a structure, Declaring structure variables, A	ccessing structure						
members, Initialization, Arrays of structure, Structures and Functions.	0						

Reference books:

- 1. E. Balaguruswamy, Programming in ANSI C, 7th Edition, Tata McGraw Hill Publications, 2017.
- 2. Reema Thareja, Computer fundamentals and programming in c, Oxford University, Second edition, 2017.
- 3. Kernighan and Ritchie, C Programming Language, 2nd Edition, 1988, 49th Reprint, 2017

- 6. B. S. Anami, S. A. Angadi & S. S. Manvi, Computer Concepts and C programming-A Holistic approach to learning C, 2nd Edition, PHI, 2010

Course Outcomes:

- CO1. Explain the basic architecture and functionalities of a computer and also recognize the hardware parts.
- CO 2. Apply programming constructs of C language to solve the real world problem.
- CO 3. Explore user-defined data structures like arrays in implementing solutions to problems like searching, sorting and tabular data processing.
- CO 4. Explore user-defined data structures like structures in implementing solutions like heterogeneous data processing.
- CO5. Design and Develop Solutions to problems using modular programming constructs using functions.

22UCS230B	Introduction to Web Programming
Hrs/Week: 2:0:2	Introduction to Web Programming
Total Hours: 40 Hrs	(Integrated)
(28 T+24 P)	

03-Credits

CIE Marks:50

SEE Marks:50

Course objectives

- 1: To use the syntax and semantics of HTML and XHTML
- 2: To develop different parts of a web page
- 3: To understand how CSS can enhance the design of a webpage.
- 4: To create and apply CSS styling to a webpage

UNIT - I 06 Hrs. Traditional HTML and XHTML: First Look at HTML and XHTML, Hello HTML and XHTML World, HTML and XHTML: Version History, HTML and XHTML DTDs: The Specifications Up Close, (X)HTML Document Structure, Browsers and (X)HTML, The Rules of (X)HTML, Major Themes of (X)HTML, The Future of Markup—Two Paths?

UNIT – II **06 Hrs.** HTML5: Hello HTML5, Loose Syntax Returns, XHTML5, HTML5: Embracing the Reality of Web Markup, Presentational Markup Removed and Redefined, HTML5 Document Structure Changes, Adding Semantics, HTML5's Open Media Effort, Client-Side Graphics with <canvas>, HTML5 Form Changes, Emerging Elements and Attributes to Support Web Applications

UNIT – III Cascading Style Sheets (CSS): Introduction, CSS Overview, CSS Rules, Example with Type Selectors and the Universal Selector, CSS Syntax and Style, Class Selectors, ID Selectors, span and div Elements, Cascading, style Attribute, style Container, External CSS Files, CSS Properties, Color Properties, RGB Values for Color, Opacity Values for Color, HSL and HSLA Values for Color, Font Properties, line-height Property, Text Properties, Border Properties, Element Box, padding Property, margin Property, Case Study: Description of a Small City's Core Area.

UNIT – IV Tables and CSS, Links and Images: Table Elements, Formatting a Data Table: Borders, Alignment, and Padding, CSS Structural Pseudo- Class Selectors, thead and tbody Elements, Cell Spanning, Web Accessibility, CSS display Property with Table Values, a Element, Relative URLs, Navigation Within a Web Page, CSS for Links, Bitmap Image Formats: GIF, JPEG, PNG, img Element, Responsive Images, Positioning Images, Shortcut Icon, iframe Element.

Programming Assignments:

- 1) Create an XHTML page using tags to accomplish the following:
 - i) A paragraph containing text "All that glitters is not gold". Bold face and italicize this text

ii)Create Equation: $\Box = 1/3(\Box_1^2 + \Box^2)$

- iii) Put a background image to a page and demonstrate all attributes of background image iv) Create unordered list of 5 fruits and ordered list of 3 flowers
- Create following table using XHTML tags. Properly align cells, give suitable cell padding 2) and cell spacing, and apply background color, bold and emphasis necessary
- 3) Use HTML5 for performing following tasks:

i) Draw a square using HTML5 SVG, fill the square with green color and make 6px brownstroke width

Write the following mathematical expression by using HTML5 a. MathML.d= x^2 - y^2 b. Redirecting current page to another page after 5 seconds using HTML5 meta tag

06 Hrs.

06 Hrs.

4) Demonstrate the following HTML5 Semantic tags- <article>, <aside>, <details>, <figcaption>,

<figure>, <footer>, <header>, <main>, <mark>, <section> for a webpage that gives informationabout travel experience.

5) Create a class called income. and make it a background color of #0ff. Create a class called expenses, and make it а background color of #f0f. Create a class called **profit**, and make it a background color of #f00.

Throughout the document, any text that mentions income, expenses, or profit, attach the appropriate class to that piece of text. Further create following line of text in the same document:

and new price is 40₹

- 6) Change the tag **li** to have the following properties:
 - A display status of inline
 - A medium, double-lined, black border
 - No list style type
 - Add the following properties to the style for **li**:
 - Margin of 5px
 - Padding of 10px to the top, 20px to the right, 10px to the bottom, and 20px tothe left

Also demonstrate list style type with user defined image logos

Course Outcomes:

At the end of the course the student should be able to:

- 1. Explain the historical context and justification for HTML over XHTML.
- 2. Develop HTML5 documents and adding various semantic markup tags.
- 3. Analyze various attributes, values and types of CSS.
- 4. Implement core constructs and event handling mechanisms of JavaScript.

Hrs/Week: 2:0:2	Introduction to Python Programming	CI	E Marks:50
Total Hours: 40 Hrs (28 T+24 P)	(Integrated)	SE	E Marks:50
ourse Objectives:			
1. Learn the syntax an	d semantics of the Python programming langu	age.	
2. Illustrate the proces	ss of structuring the data using lists, tuples		
3. Appraise the need f	or working with various documents like Excel	, PDF, W	ord and Others.
4. Demonstrate the us	e of built-in functions to navigate the file syste	em.	
	UNIT – I		08 Hrs
String Data Types, Stri	g Expressions into the Interactive Shell, The In ng Concatenation and Replication, Storing V	0	0
Comparison Operators,	g Your Program, Values, Comparison Operators, Boolean Oper Elements of Flow Control, Program E Iodules, Ending a Program Early with sys.exit(Execution	
Flow control: Boolean Comparison Operators, Statements, Importing M Functions: def Statemer Value, Keyword Argun	Values, Comparison Operators, Boolean Opera Elements of Flow Control, Program E	Execution (), urn State	Flow Control
Flow control: Boolean Comparison Operators, Statements, Importing M Functions: def Statemer Value, Keyword Argun	Values, Comparison Operators, Boolean Opera Elements of Flow Control, Program E Iodules, Ending a Program Early with sys.exit(ents with Parameters, Return Values and ret ments and print(), Local and Global Scope Short Program: Guess the Number	Execution (), urn State	Flow Control

UNIT – II	06 Hrs						
Lists: The List Data Type, Working with Lists, Augmented Assignment O Methods, Example Program: Magic 8 Ball with a List, List-like Types: Strings a							
References,							
Dictionaries and Structuring Data: The Dictionary Data Type, Pretty Printin	ig, Using Data						
Structures to Model Real-World Things,

22UCS232B		03-Credits
Hrs/Week: 2:0:2	Basics of Java Programming	CIE Marks:50
Total Hours: 40 Hrs (28 T+12 P)		SEE Marks:50

- 1. Learn fundamental features of object oriented language and JAVA
- 2. Set up Java JDK environment to create, debug and run simple Java programs.
- 3. Learn object oriented concepts using programming examples.
- 4. Study the concepts of importing of packages and exception handling mechanism.

UNIT – I	08 Hrs						
An Overview of Java: Object-Oriented Programming, A First Simple Program,							
Program, Two Control Statements, Using Blocks of Code, Lexical Issues, The Java Class							
Libraries, Data Types, Variables, and Arrays: Java Is a Strongly Typed Language, The Primitive							
Types, Integers, Floating-Point Types, Characters, Booleans, A Closer Look at Literals, Variables,							
Type Conversion and Casting, Automatic Type Promotion in Expressions, Arrays							
	s, A rew words						
About Strings							
Text book 1: Ch 2, Ch 3 UNIT – II	06 Hrs						
Operators: Arithmetic Operators, The Bitwise Operators, Relational Operators, H							
Operators, The Assignment Operator, The ? Operator, Operator Precedence, Usi	e						
	-						
Control Statements: Java"s Selection Statements, Iteration Statements, Jump State	mems.						
Text book 1: Ch 4, Ch 5 UNIT – III	06 Hrs						
Introducing Classes: Class Fundamentals, Declaring Objects, Assigning Objects							
Variables, Introducing Methods, Constructors, The this Keyword, Garbage							
finalize() Method, A Stack Class, A Closer Look at Methods and Classes: Overlo	•						
Using Objects as Parameters, A Closer Look at Argument Passing, Returning Obj							
Introducing Access Control, Understanding static, Introducing final, Arrays Revisi	ted						
Text book 1: Ch 6, Ch 7 (7.1-7.9)							
UNIT – IV	08 Hrs						
Inheritance: Inheritance, Using super, Creating a Multilevel Hierarchy, When C							
Called, Method Overriding, Dynamic Method Dispatch, Using Abstract Classes,	Using final with						
Inheritance, The Object Class.							
Text book 1: Ch 8							
Reference books:							
Herbert Schildt, Java The Complete Reference, 7th Edition, Tata McGraw Hill, 20	07.						
Web links and Video Lectures (e-Resources):							
• https://onlinecourses.nptel.ac.in/noc22_cs47/preview							
Course Outcomes:							
CO1. To explain the features and object oriented concepts in JAVA programmin							
CO 2. To analyse working of bitwise operators in JAVA CO 3. To develop simple programs based on polymorphism and inheritance							
CO 4. To describe the concepts of importing packages and exception handling med	rhanism						
Let 1. To describe the concepts of importing packages and exception handling ince
