Basaveshwar Engineering College, Bagalkote

Department of Electronics and Communication Engineering

Vision, Mission Statements and Values

Vision

To achieve excellence in electronics and communication engineering through quality education and research for developing competent professionals.

Mission

1. Foster a dynamic teaching and learning process.
2. Encourage research through innovation and collaboration.
3. Imbibe moral, ethical values and social responsibilities.

Values

The values of the department are

1. Work is Worship
2. Ethics and Integrity
3. Empathy and Compassion
4. Indian Ethos
5. Mutual Respect

Basaveshwar Engineering College, Bagalkote

Department of Electronics and Communication Engineering

SWOC Analysis

S:Strength:

1. Infrastructure
   - (i.) ICT enabled classrooms/seminar hall with good ambience.
   - (ii.) Well equipped laboratories to cater curriculum requirements.
   - (iii.) Department library with good number of titles and volumes.
   - (iv.) Scope for academic extension programmes.
2. Faculty
   - (i.) 75% of faculty with Ph.D.
   - (ii.) Faculty with minimum of 12 years teaching experience.
   - (iii.) Faculty retention ratio is 100 %.
3. Students
   - (i.) Students with academic and competitive bent of mind.
   - (ii.) 75% of the students are placed in reputed industries.
   - (iii.) 10% to 15% of the students are registering for B.E. Honours Degree.
4. Curriculum
   - (i.) Research and industry oriented adaptive curriculum.
   - (ii.) Curriculum with integrated courses.
5. Alumni
   - (i.) Alumni works in reputed organizations across the world.
   - (ii.) Alumni interactions with students and faculty to bridge the gap between campus and corporate.

W:Weakness:

1. IPR competencies are inadequate.
2. Relatively less number of memberships in professional bodies.
3. Limited collaborative activities.
4. Less number of inter-disciplinary courses and projects.
5. Less number of industry supported laboratories/courses.
6. Inadequate number of funded projects.
7. Less scope for co-curricular and cultural activities.

O:Opportunities:

1. Establishment of Distant Learning Center (DLC) using existing resources.
2. Participation in collaborative projects/ research work with allied institutions.
3. Fostering alumni participation in academics and placement activities.
4. Establishment of Skilling Centers for students.
5. Faculty exchange programs with academia and industry.
6. Organizing conferences.
7. Facilitating incubation centers for alumni.
8. Scope for academic extension programmes
9. Training on computer usage/ programming languages for general public.
10. Enhancing consultancy activities.

C:Challenges:

1. To incorporate experiential teaching learning process.
2. Adapting curriculum to future industry needs.
3. Fostering collaboration to enhance research, innovation and entrepreneurship activities.
4. Attracting diversified students.
5. Strategies to strengthen the placement activities for higher packages and core companies.
6. Secure additional research grants and consultancy opportunities.
7. Enhance quality publications and file patents.

Programme Outcomes

a) **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

b) **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

c) **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

d) **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

e) **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

f) **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

g) **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

h) **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

i) **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

j) **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

k) **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

l) **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Programme Specific Outcomes (PSOs)

1. Analyze and design systems for electronics, communication, and signal processing applications.

2. Use domain specific tools for design, analysis, synthesis, and validation of VLSI and embeddedsystems

3. Demonstrate the conceptual knowledge with respect to architecture, design analysis and simulationof computer networking and applications

Programme Educational Objectives (PEOs)

PEO1: Our graduates will be able to lead a successful career by solving complex Engineering Problems of society/industry

PEO2: Enable graduates to excel in academia, industry, entrepreneurship and engage in research and lifelong learning

PEO3: Graduates will be able to work effectively as individuals in multidisciplinary environments with high integrity, ethics, human values and societal responsibilities

PEO4: Graduates will be able to exhibit strong leadership, communication, and teamwork skills to succeed in dynamic professional environments and contribute to the global challenges

Basaveshwar Engineering College (Autonomous), Bagalkote

Syllabus for
B.E. I & II – Semester
(For students admitted to I year in 2021-22)

21UEC104C		03-Credits, L:T:P (3:0:0)
Hrs/Week: 03	**Basic Electronics**	CIE Marks:50
Total Hours: 40		SEE Marks:50

UNIT - I	10 Hrs

Semiconductor Diodes: Introduction, PN junction diode, characteristics and parameters, diode approximations, DC load line analysis

Diode Applications: Introduction, half wave rectification, full wave rectification, full wave rectifier power supply: Capacitor filter circuit, voltage multiplier, diode logic gates

Zener Diodes: Junction breakdown, circuit symbol and package, characteristics and parameters, equivalent circuit, Zener diode voltage regulator.

Self-study component: ESAKI diode and its working

UNIT – II	10 Hrs

Bipolar Junction Transistors: Introduction, BJT voltages and currents, common base characteristics, common emitter characteristics, common collector characteristics,

BJT Biasing: Introduction, DC load line and bias point, BJT amplification, voltage divider bias.

Amplifier and Oscillator: Single stage CE-amplifier, RC-phase shift oscillator, LC oscillator

Self -study component: BJT as a switch

UNIT - III	10 Hrs

Operational Amplifiers: Introduction, the operational amplifier, block diagram representation of typical op-amp, schematic symbol, op-amp parameters - gain, input resistance, output resistance, CMRR, slew rate, bandwidth, input offset voltage, input bias current and input offset current, the ideal op-amp, equivalent circuit of op-amp, open loop op-amp configurations, differential amplifier, inverting & non inverting amplifier

Op-Amp Applications: Inverting configuration, non-inverting configuration, differential configuration, voltage follower, integrator, differentiator

Self-study component: Op-Amp as zero crossing detector

UNIT - IV	10 Hrs

Boolean Algebra and Logic Circuits: Binary numbers, number base conversion, octal & hexadecimal numbers, complements, basic definitions, axiomatic definition of Boolean algebra, basic theorems and properties of Boolean algebra, Boolean functions, canonical and standard forms, other logic operations, digital logic gates

Combinational logic: Introduction, design procedure, adders- half adder, full adder

Communications: Introduction to communication, communication system, modulation

Self-study component: Half subtractor and full subtractor

Reference books:
1) Mike Tooley, 'Electronic Circuits, Fundamentals & Applications', 4th Edition, Elsevier, 2015.
2) Digital Logic and Computer Design, M. Morris Mano, PHI Learning, 2008 ISBN-978-81-203- 0417-84.
3) D P Kothari, I J Nagrath, 'Basic Electronics', 2nd edition, McGraw Hill Education (India),Private Limited, 2018

Course Outcomes:
A student who successfully completes this course should be able to
CO1: Design the basic circuits to get V-I characteristics of semiconductor devices.
CO2: Design a BJT amplifier to meet the given specifications.
CO3: Identify and analyze the different configurations of operational amplifier.

CO4: Design simple logic circuits using basic gates.
CO5: Design type of modulation necessary for a given communication applications.

Course Outcomes	Programme Outcomes

Syllabus for
B.E. III & IV – Semester
(For students admitted to I year in 2021-22)

SUBJECT CODE: 21UMA301C	Numerical Techniques and Integral Transforms	Credits: 03
L:T:P - **3-0-0**		CIE Marks: 50
Total Hours/Week: 3		SEE Marks: 50

UNIT-I	**xx Hrs.**
Numerical Analysis-I: Introduction to root finding problems, Bisection Method, Newton-Raphson method. Finite differences, forward and backward difference operators (no derivations on relations between operators) Newton-Gregory forward and backward interpolation formulae. (Without proof), Lagrange's and Newton's divided difference interpolation formulae (without proof).	
UNIT–II	**xx Hrs.**
Numerical Analysis-II: Numerical differentiation using Newton's forward and backward formulae-problems. Trapezoidal rule, Simpson's one third rule, Simpson's three eighth rule and Weddle's rule (no derivation of any formulae)-problems. Euler's and Modified Euler's method, Runge-Kutta 4th order method.	
UNIT–III	**xx Hrs.**
Fourier series: Periodic functions, Conditions for Fourier series expansions, Fourier series expansion of continuous and functions having finite number of discontinuities, even and odd functions. Half-range series, practical harmonic analysis.	
UNIT–IV	**xx Hrs.**
Fourier transforms and z-transforms: Infinite Fourier transforms and inverse Fourier transforms-simple properties, Fourier sine and Fourier cosine transforms, Inverse Fourier sine and cosine transforms. Z-transforms-definition, standard forms, linearity property, damping rule, shifting rule-problems	

Reference Books *

Textbooks:
1. Numerical Methods for Engineers by Steven C Chapra & Raymond P Canale.
2. Higher Engineering Mathematics by Dr. B.S. Grewal, Khanna Publishers, New Delhi.
3. Advanced Engineering Mathematics By H. K. Das, S. Chand & company Ltd. Ram Nagar, New Delhi.

Reference Book:
1. Advanced Engineering Mathematics by E Kreyszig (John Wiley & Sons)

Course Outcomes**

After completion of the course student will be able to
1. **Solve engineering problems using non-linear equations and interpolation techniques.**
2. **Solve problems using numerical differentiation and numerical integration.**
3. **Perform numerical solutions of ordinary differential equations.**
4. **Understand Fourier analysis that provides a set of mathematical tools which enable the engineer to break down a wave into its various frequency components. It is then possible predict the effect of a particular waveform.**
5. **Understand the basic concepts of Fourier transforms and z –transforms, to solve ode, pde and difference equations.**

* Books to be listed as per the format with decreasing level of coverage of syllabus
** Each CO to be written with proper action word and should be assessable and quantifiable

Course Outcomes	Programme Outcomes (POs)												Program Specific Outcomes (PSOs)

21UEC302C	Electronic devices and Circuits Design	Credits:03
L:T:P - 3 : 0: 0		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

UNIT-I	10Hrs.

Field Effect Transistors: Introduction, construction, operation and characteristics of JFETs, transfer characteristics, depletion type MOSFET, enhancement type MOSFET, practical applications.
Thyristors: Introduction, construction, operation and characteristics of SCR, TRIAC, UJT.
Diode applications: clippers and clampers.
Self-study component: Comparison between Si and Ge diode, study of Data sheets of different types of Si and Ge diodes, Zener diodes.

UNIT–II	10 Hrs.

Optoelectronic Devices: Light units, Light emitting diode (LED), liquid crystal displays (LCD), photo conductive cell, photo diode and solar cells, photo transistors, opto-couplers.
Miscellaneous Devices: Schottky diode, varactor diode, power diode, tunnel diode.
Self-study components: Voltage Variable Capacitors (VVC) , Thermistors: operation ,characteristics and applications.

UNIT–III	10 Hrs.

FET Biasing: Introduction, Fixed bias configuration, Self bias configuration, Voltage divider biasing, Common gate configuration, Design, Trouble shooting, p-channel FETs, Universal JFET bias curve.
Self- study components: Study of multistage amplifier: classification, distortions in amplifier, two stage RC coupled amplifier and its frequency response.

UNIT–IV	10 Hrs.

FET amplifiers: Introduction, JFET small signal model, voltage divider bias configuration.
Power Supplies (Voltage Regulators) **:** Introduction, general filter considerations, capacitor filter, RC filter, discrete transistor voltage regulation, IC voltage regulators.

Reference Books *

1.   Nashelesky & Boylestead, 2009, "Electronic Devices & Circuit Theory" 10th Edition, Pearson
2.   D.A.Bell, 2007, "Electronic Devices & Circuit" , 4th Edition, PHI
3.   M. D. Singh, K. B. Khanchandani, 2007, "Power Electronics", 2nd Edition, McGraw Hill
         Publication

Course Outcomes**

After completion of the course student will be able to
  1. Analyze different types of electronic devices and design clipper and clamper circuits.
  2. Differentiate the characteristics and importance of different optoelectronic devices.
  3. Choose a specific FET and other components to design an amplifier.
  4. Design a regulated power supply to meet the given specifications.

21UEC303C		Credits: 03
L:T:P - 3 : 0: 0	**Digital Electronics and Logic Design**	**CIE Marks: 50**
Total Hours/Week: 40		**SEE Marks: 50**

UNIT-I	10 Hrs.
Principles of Combinational Logic and Design: Review of Boolean algebra, simplification and implementation of Boolean expression using basic gates and universal gates. Definition of combinational logic, canonical forms, generation of switching equations from truth tables, K-maps (up to 5 variables), Quine-McCluskey minimization technique, map entered variables.	

UNIT–II	10Hrs.
Analysis and Design of Combinational Circuit using MSI Components: General approach, binary adder and subtractors, cascading full adders, look ahead carry, decimal adders, comparators, decoders, encoders, multiplexers.	

UNIT–III	10Hrs.
Flip-Flops: The basic bistable element, latches, timing considerations, master-slave SR flip-flops, master slave JK flip-flop, edge triggered flip-flop, positive edge triggered D flip-flop, negative edge triggered D flip-flop, characteristic equations. **Applications of Flip-Flops:** Registers (SISO, SIPO, PISO and PIPO) and bidirectional shift register.	

UNIT–IV	10Hrs.
Applications of Flip-Flops: Counters, binary ripple counters, synchronous binary counters, counters based on shift registers, design of synchronous counters, design of asynchronous counter using clocked JK, D, T and SR flip-flops. **Sequential Circuit Design and Analysis:** Introduction to Mealy and Moore models, state machine notation, synchronous sequential circuit analysis, construction of state diagrams.	

Reference Books *

2. John M Yarbrough, 2001,"Digital Logic Applications and Design", Thomson Learning
3. Thomas L. Floyd, "Digital Fundamentals", 9th edition, PHI
4. Charles H Koth, 2004,"Fundamentals of Logic Design", Thomson learning
5. Meno and Kim, 2001,"Logic and Computer Design Fundamentals",2 nd edition ,Pearson
6. Malvino and Leech, "Digital Principles & Applications", 2nd edition, PHI

Course Outcomes**

After completion of the course student will be able to
1. **Simplify the given Boolean expressions using Boolean algebra, K-map, Quine McCluskey and map entered variables methods.**
2. **Design and analyse combinational circuits using i) basic gates ii) universal gates iii) MUXs and iv) decoder and gates.**
3. **Analyse different types of latches, flip flops and shift registers.**
4. **Design, model and analyse synchronous and asynchronous sequential circuits.**

SUBJECT CODE: 21UEC304C	Network Analysis	Credits: 03
L:T:P – 3-0-0		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

UNIT-I	10 Hrs.

Basic concepts: Concept of voltage, current and power, ideal and practical representation of energy sources, source transformation, network reduction using star-delta transformation, mesh current and node voltage analysis with dependent and independent sources for AC and DC networks, concept of super mesh and super node.

UNIT–II	10 Hrs.

Network theorems: Superposition, Millman's, Thevenin's, and Maximum power transfer theorems.
Network topology: Graph of a network, concept of tree and co-tree, incidence matrix, tie-set matrix, cut-set matrix, analysis of networks, network equilibrium equations.

UNIT–III	10 Hrs.

Resonance circuits: Series and parallel resonance circuits, frequency of resonance, frequency responses, Q-factor, bandwidth. **Two port network parameters:** Z, Y, h, transmission parameters and relationship between parameters.

UNIT–IV	10 Hrs.

Laplace transformation: Basic theorems, Laplace transform of periodic functions, application of Laplace transform to RL and RC circuits. **Attenuators:** Symmetrical T, PI, bridge T, Lattice attenuators, Asymmetrical T, L, and PI attenuators. **Equalizers:** Two terminal series and shunt equalizers.

Reference Books *

Textbooks:
1. Roy Choudhary, "Networks and systems", 2nd Edition, New Age International Publications, 2006.

2. M.E. Van Valkenberg "Network analysis", Prentice Hall of India, 3rd Edition, 2000.

Course Outcomes**

After completion of the course student will be able to
1. **Simplify networks using source transformation, star-delta conversion and determine current, voltage, power using nodal and mesh analysis to AC and DC networks.**
2. **Apply network theorems and topology for complex networks to find responses.**
3. **Analyze series and parallel resonant circuits and find different network parameters.**
4. **Apply concept of Laplace transformation to networks and waveforms, design attenuators and simple equalizers.**

* Books to be listed as per the format with decreasing level of coverage of syllabus
** Each CO to be written with proper action word and should be assessable and quantifiable

SUBJECT CODE: 21UEC305C	Data Structures using "C"	Credits: 03
L:T:P – 3-0-0		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

UNIT-I	xx Hrs.

Introduction: Data structures, classifications (primitive & non primitive), data structure operations, pointers and dynamic memory allocation, pointers to arrays , structures, self-referential structures, pointers to structures.

Functions: Functions (Passing structure variable as an argument, passing whole structure as argument, passing structure variable as a pointer argument, etc).

UNIT–II	xx Hrs.

Dynamically allocated arrays (Using calloc() or malloc()), array Operations: traversing, inserting, deleting, searching, and sorting. Stacks: definition, stack operations (push, pop and display. Test: underflow and overflow conditions), array representation of stacks, stacks using dynamic arrays, Stack Applications: infix to postfix conversion, evaluation of postfix expression, program to evaluate postfix expression, program to convert Infix to Postfix expression.

UNIT–III	xx Hrs.

Recursion - Factorial, GCD, Fibonacci sequence, tower of Hanoi. Queues: Definition, array representation, queue operations (Insert, delete and display), circular queues operations (Insert, delete and display), De-queues(Insert, delete and display), Priority Queues(Insert, delete and display). programming examples.

UNIT–IV	xx Hrs.

Linked Lists: Definition, representation of linked lists in memory, Linked list operations: Traversing, searching, insertion, and deletion. Doubly linked lists(Traversing, searching, insertion, and deletion), Circular linked lists(Traversing, searching, insertion, and deletion). Implementation of stack and queue using singly linked list. Programming Examples.

Reference Books
1. A M Tenenbaum, '' Data Structures using C'', PHI, 1989Robert Kruse, '' Data Structures and Program Design in C'', PHI, 2nd edition,1996

Course Outcomes**

After completion of the course student will be able to
1. Demonstrate the concepts of a) various types of data structures, operations and algorithms, b) Sorting and searching operations.
2. Analyze the performance of stack, queue, lists, trees, and searching and sorting techniques.
3. Write the C programs for all the applications of data structures.
4. To solve real world problems by applying data structure concepts.

* Books to be listed as per the format with decreasing level of coverage of syllabus
** Each CO to be written with proper action word and should be assessable and quantifiable

L:T:P – 0-0-3		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

Sl. No	LIST OF THE EXPERIMENTS
1.	V-I characteristics and analysis of diode.
2.	Analysis of diode as a half-wave and full-wave rectifier.
3.	V-I characteristics and their analysis of Zener diode.
4.	Zener diode as a voltage regulator and its regulation analysis.
5.	Input and output characteristics and their analysis of Bipolar Junction Transistor (BJT) in common base, common collector and common emitter configuration.
6.	Design, implementation and frequency response of transistor (BJT) as an amplifier
7.	Design and implementation of transistor (BJT) as an oscillator.
8.	Input and output characteristics and their analysis of field effect transistor (FET).
9.	Design, implementation and frequency response of FET as an amplifier.
10.	V-I characteristics and analysis of unijunction transistor (UJT).
11.	Implementation of UJT as a relaxation oscillator.
12.	V-I characteristics and analysis of silicon controlled rectifier (SCR).
13.	Study of SCR as half-wave and full-wave controlled rectifier.
14.	Simulation and analysis of Amplifiers and Oscillators.
15.	Simulation and analysis of DC and AC excited RL and RC circuits.

Course Outcomes**

After completion of the course student will be able to
1. **Characterize semiconductor devices based on their characteristics.**
2. **Realize rectifiers, controlled rectifiers and regulators.**
3. **Design amplifiers and oscillators for given specifications.**
4. **Simulate and analyze basic electronic circuits.**

> * **Books to be listed as per the format with decreasing level of coverage of syllabus**

LIST OF THE EXPERIMENTS

Sl. No.		
1	Simplification, realization of Boolean expression(s) using basic logic gates.	
2	Implementation of Boolean expression(s) using universal gates.	
3	Design of full adder and full subtractor implementation using basic logic gates.	

4	Realization of
	    a. Parallel adder / subtractor using 7483chip
	    b. Decoder chip to drive LED display	

5	Design and implementation of code converters (any two).	

6	Implementation of three variable Boolean expression(s) using
	    a. 8:1MUX
	    b. 4:1MUX	

7	Implementation of three variable Boolean expression(s) using 3:8 decoder and gates.	
8	Design of two-bit comparator using basic logic gates and study of 7485 magnitude comparator.	

9	Truth table verification of flip-flops:
	    a. Master Slave JK flip-flop implementation using only NANDgates
	    b. JK flip flop using7476.	

10	Design of
	    a. 4-bit asynchronous up counter using JK flip-flop(7476)
	    b. 4-bit asynchronous down counter using JK flip-flop(7476)
	    c. Mod-n asynchronous counter (7476) (n <=4)	

11	Design of
	    a. UP counter using 74193
	    b. DOWN counter using 74193	

12	Design of shift registers using 7 495 viz. SIPO, SISO, PISO, PIPO shift right, shift left.	
13	Simulate any 6 experiments covering both combinational and sequential circuits using circuit simulator- PROTEUS VSM.	

Course Outcomes**

After completion of the course student will be able to
1. **Should be able to design combinational circuits and implement it using a) basic logic Gates b) universal gates, c) multiplexers and d) decoder and gates**
2. **Should be able to design and realize latches and flip flops**
3. **Should be able to design and implement asynchronous counters**
4. **Should be able to design and implement synchronous counters and shift registers**
5. **Should be able to simulate combinational and sequential circuit using PROTEUS software**

* Books to be listed as per the format with decreasing level of coverage of syllabus
** Each CO to be written with proper action word and should be assessable and quantifiable

SUBJECT CODE: 21UEC308C	Higher Programming Paradigm	Credits: 01
L:T:P – 2-0-0		CIE Marks: 50
Total Hours/Week: 02		SEE Marks: 50

UNIT-I	10 Hrs.

Datatypes in python: comments in python, Docstrings, How python sees variables, Datatypes in python, Sequences in python, Literals in python, Determining the data type of a variable, Identifiers and reserved words, Naming conventions in python
Operators in Python: Operator, operator precedence and associativity, Mathematical functions
Input and Output: Output statements, Input statements, Command Line arguments
 Control Statements Strings and Characters

UNIT–II	10 Hrs.

Functions: Defining a function, calling a function, Returning Results from a function, Returning multiple values from a function, Formal and actual arguments, local and global variables, passing a group of elements to a function, recursive functions, the special variable__nam. **Lists and tuples: lists, tuple , Dictionaries.**

UNIT–III	10 Hrs.

Exceptions: exceptions, exception handling, types of exceptions, user defined exceptions
Files in python: files, types of files in python, opening a file, closing a file, working with text files containing strings, working with binary files, pickle in python.

UNIT–IV	10 Hrs.

Object Oriented Programming: Classes and Objects, Creating Classes in Python, Creating Objects in Python, The Constructor Method, Classes with Multiple Objects, Class Attributes versus Data Attributes, Encapsulation, Inheritance, The Polymorphism.

Reference Books *

 Text Books
    1. Core Python Programming by Dr. R.NageswawaRao, Dreamtech press, 2nd Edition 2018.
Reference Books
   1. Introduction to Python Programming by Gowrishankar S. Veena A. , CRC Press Taylor & Francis Group, 1st Edition 2019.
   2. Python Programming by Michael Urban and Joel Murach , Mike Murach Elizabeth Drake, 1st Edition,2016

Course Outcomes**

After completion of the course student will be able to
   1. **Explain syntax and semantics of different statements and functions in Python.**
   2. **Demonstrate the use of strings, files, lists, dictionaries and tuples in simple applications.**
   3. **Demonstrate Exception Handling and file operations.**
   4. **Explain class, objects, polymorphism, inheritance.**

 * **Books to be listed as per the format with decreasing level of coverage of syllabus**

** Each CO to be written with proper action word and should be assessable and quantifiable

Course Outcomes	Programme Outcomes (POs)												Program Specific Outcomes (PSOs)

SUBJECT CODE: 21UMA300M	**Bridge Course Mathematics -I**	**Credits: Mandatory**
L:T:P -		CIE Marks: 50
Total Hours/Week:03		SEE Marks: 50

UNIT-I	**10 Hrs.**

Differential Calculus: Review of elementary calculus, Polar curves - angle between the radius vector and tangent, angle between two curves, pedal equation. Taylor's and Maclaurin's series expansions for one variable (statements only) without proof. Problems

UNIT–II	**10 Hrs.**

Partial differentiation: Introduction to function of several variables, Partial derivatives; Euler's theorem - problems. Total derivatives-differentiation of composite functions. Jacobians-problems

UNIT–III	**10 Hrs.**

Integral Calculus: Evaluation of double and triple integrals. Area bounded by the curve. Beta and Gamma functions: Definitions, Relation between beta and gamma functions-problems.

UNIT–IV	**10 Hrs.**

Vector Calculus: Vector Differentiation: Scalar and vector fields. Gradient, directional derivative; curl and divergence-physical interpretation; solenoidal and irrotational vector fields- problems

3. C.Ray Wylie, Louis C.Barrett : "Advanced Engineering Mathematics", 6th Edition, McGraw-Hill Book Co., New York, 1995.
4. B.V. Ramana: "Higher Engineering Mathematics" 11th Edition, Tata McGraw-Hill, 2010.
5. Veerarajan T.," Engineering Mathematics for First year", Tata McGraw-Hill, 2008.
6. N.P.Bali and Manish Goyal: A Text Book of Engineering Mathematics, Laxmi Publishers, 7th Ed., 2010.

Course Outcomes**

After completion of the course student will be able to
1. **Apply the knowledge of calculus to solve problems related to polar curves and its applications in determining the bentness of a curve.**
2. **Learn the notion of partial differentiation to calculate rates of change of multivariate functions and solve problems related to composite functions and Jacobians.**
3. **Apply the concept of multiple integrals and their usage in computing the area and volumes.**
4. **Apply the knowledge of vector calculus to solve the engineering problems**

* **Books to be listed as per the format with decreasing level of coverage of syllabus**

** Each CO to be written with proper action word and should be assessable and quantifiable

SUBJECT CODE: 21UMA401C	**Statistics and Probability Distributions**	**Credits: 03**
L:T:P – 3-0-0		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

UNIT-I	**10 Hrs.**

Statistics: Curve fitting by the method of least squares $y = a + bx$, $y = ab^x$, $y = a + bx + cx^2$ Correlation, expression for the rank correlation coefficient and regression.

UNIT–II	**10 Hrs.**

Probability: addition rule, conditional probability, multiplication rule, Baye's rule. Discrete and continuous random variables-Probability density function, Cumulative distribution function, Problems on expectation and variance

UNIT–III	**10 Hrs.**

Probability distributions: Binomial distributions Poisson distributions and Normal distributions. Concept of joint probability, Joint probability distributions.

UNIT–IV	**10 Hrs.**

Markov chains: Markov chains: Introduction, Probability vectors, Stochastic Matrices, Fixed Points and Regular stochastic Matrices, Markov chains, higher transition probabilities, stationary distribution of regular Markov chains and absorbing states.

Reference Books *

2. Theory and problems of probability by Seymour Lipschutz (Schaum's Series).
3. Advanced Engineering Mathematics by H. K. Dass
4. Advanced Engineering Mathematics by E Kreyszig (John Wiley & Sons)
5. Probability and stochastic processes by Roy D. Yates and David J. Goodman, wiley India pvt.ltd 2nd edition 2012.
6. Advanced Engineering Mathematics by Peter V. O'Neil.Author/s last Name, initial (Year), Book Title (edition), Publisher

Course Outcomes**

After completion of the course student will be able to
1. **To apply the least square sense method to construct the specific relation for the given group**
   of data.
2. **To understand the concept of probability.**
3. **To apply the concept of probability to find the physical significance of various distribution phenomena.**
4. **To understand the concepts of probability distributions.**
5. **To apply the concept of Markov Chain for commercial and industry purpose.**

21UEC402C	Signals and Systems	Credits: 03
L:T:P - 2 : 2: 0		CIE Marks: 50
Total Hours/Week: 04		SEE Marks: 50

UNIT-I	10 Hrs.

Introduction: Definition of signals and systems, classification of signals, elementary signals, basic operations on signals, interconnection of systems and operations, properties of systems.

UNIT–II	10 Hrs.

Time domain representation of LTI systems: Convolution sum, convolution integral, impulse response representation. Properties of impulse response.

UNIT–III	10 Hrs.

Fourier and inverse Fourier representation of signals: Introduction to complex sinusoidal signals and their use in Fourier representation of periodic signals (brief review of CTFS and DTFS). Continuous time Fourier transform, Discrete time Fourier Transform (DTFT), properties of DTFT and applications.

UNIT–IV	10 Hrs.

Z -Transforms: Introduction, properties of ROC, properties of Z-transform and relation of Z - transform with Fourier transforms. Inverse Z-transform, transform analysis of LTI systems, transfer function, stability and causality, and solution of difference equations using Z-transform.

Reference Books *

2. Michel J. Roberts, 2003 , Signals and Systems (2nd Edition), Tata McGraw Hill
3. Allan V. Oppenheam, Alan S. Willsky, and Hamid Nawab, 1997, Signals and Systems (2nd Edition), Pearson Education Asia.

Course Outcomes**

After completion of the course student will be able
 1. Represent, characterize, and analyze CT and DT signals and systems.
 2. Analyze CT and DT systems in time domain using convolution.
 3. Analyze CT and DT systems in frequency domain, using Fourier tools like CTFT and DTFT.
 4. Apply z-transform and its properties in the analysis of discrete-time signals and systems.

 * **Books to be listed as per the format with decreasing level of coverage of syllabus**

21UEC403C	Linear Integrated Circuits and Its Applications	Credits: 03
L:T:P - 3 : 0 : 0		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

UNIT-I	10 Hrs.

Differential Amplifiers: Introduction, differential amplifier, differential amplifier circuit configurations, dual- input balanced output differential amplifier, dual- input unbalanced output differential amplifier, single input balanced output differential amplifier, single input unbalanced output differential amplifier, constant current bias, current mirror, cascaded differential amplifier stages, level translator.

Introduction to operational amplifiers: Introduction, block diagram representation of a typical op-amp, the ideal op-amp, equivalent circuit of an op-amp, ideal voltage transfer curve, open loop op-amp configurations.

Self study component: Numericals on differential amplifiers

UNIT–II	10 Hrs.

An op-amp with negative feedback: Block diagram representation of feedback configuration, voltage series feedback amplifier, voltage shunt feedback amplifier, differential amplifier.

The practical op-amp: Input offset voltage, input bias current, input offset current, total output offset voltage, common mode configuration, common mode rejection ratio, power supply rejection ratio, slew rate

Self study component: To derive gain, input resistance of differential amplifier with three op-amps

UNIT–III	10 Hrs.

General applications: The peaking amplifier, summing, scaling and averaging amplifiers, integrator, differentiator.

Active filters: First order and second order low pass butter worth filter, first order and second order high pass butter worth filter, higher order filters, band pass filter, band reject filters.

Self study component: To study All pass filter

UNIT–IV	10 Hrs.

Oscillators and waveform generator: Introduction, phase shift oscillator, wien bridge oscillator, square wave generator, triangular wave generator.

Comparators and converters: Basic comparator, zero crossing detector, sample and hold circuit.

The 555 Timer: Block diagram, connection diagram, 555 timer as Astable and Monostable multivibrators

Self study component: To study voltage-controlled oscillator and Schmitt trigger

Reference Books *

1. Gayakwad Ramakanth A. "Operational Amplifiers and Linear Integrated Circuits", 3rd & 4th Edition, PHI.
2. D. Roy Choudary, "Linear Integrated Circuits", 2nd Edition.

Course Outcomes**

After completion of the course student will be able to
1. Identify and analyze the different configurations of differential amplifier.
2. Analyze the different feedback amplifiers and various parameters of practical op-amp.
3. Design the active filters and amplifiers using op-amp.
4. Design waveform generators, data comparators and converters.

21UEC404C		Credits: 03
L : T : P - 3 : 0 : 0	**Analog and Digital Communication**	**CIE Marks: 50**
Total Hours/Week: 03		**SEE Marks: 50**

UNIT-I	10 Hrs.

Linear modulation: Baseband and carrier communication, time domain and frequency domain description, generation and detection of Amplitude Modulation (AM) waves.

DSB-SC modulation: Time and frequency domain representation, generation and detection of DSB-SC modulated waves.

SSB modulation: Time domain representation of SSB signal, generation and detection of SSB modulated waves, Quadrature Amplitude Modulation (QAM).

Vestigial sideband modulation: Frequency domain representation, generation and detection of VSB, comparison of amplitude modulation techniques, super heterodyne receiver.

UNIT–II	10 Hrs.

Angle modulation: Concept of angle modulation, relation between frequency and phase modulation, bandwidth of angle modulated wave.

Generation of FM: direct and indirect methods, PLL, demodulation of FM, pre-emphasis and de-emphasis, FM radio.

UNIT–III	10 Hrs.

Digital Communication: Model of digital communication systems Sampling process: Sampling Theorem, quadrature sampling of Band pass signal, reconstruction of a message from its samples, signal distortion in sampling. Line codes, unipolar, polar and Manchester codes and their power spectral densities.

UNIT–IV	10 Hrs.

Digital Modulation Techniques: Digital Modulation formats, Coherent binary modulation techniques (ASK, PSK, FSK), Probability of error for each ASK, PSK, FSK. Coherent quadrature modulation techniques, MSK, (without derivation of probability of error equation). Non-coherent binary modulation techniques (FSK and DPSK).

6. Bernard Sklar and Prabitrakumary Ray, "Digital Communication Fundamentals and Applications", Pearson Publications, 2010
7. K. Sam Shanmugam, "Digital and Analog Communication Systems", John Wiley & Sons, 2006

Course Outcomes

After completion of the course student will be able to
1. Compute spectrum of modulated and demodulated signals.
2. Analyze amplitude modulation and demodulation circuits.
3. Do analysis of angle modulation and demodulation techniques.
4. Design sampling and reconstruction circuit for given different sampling frequencies.
5. Design different digital modulation /demodulation techniques.

Course Outcomes	Programme Outcomes (POs)												Program Specific Outcomes (PSOs)		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3

SUBJECT CODE: 21UEC405C	8051 Microcontroller	Credits: 03
L:T:P - 3 : 0: 0		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

UNIT-I	10 Hrs.

Microprocessors and Microcontrollers: Introduction, Harvard Vs Von Neumann architecture, comparison between microprocessors and microcontrollers, 8051 Architecture: General features of 8051 Microcontroller, 8051 block diagram, programming model, pin description, 8051 oscillator and clock, general purpose and special function registers, internal RAM and ROM, stack, input/output pins, ports and circuits, external memory.

UNIT–II	10 Hrs.

8051 Instructions and Programming: addressing modes, types of instructions, instruction set, data move instructions, external data move instructions, arithmetic instructions, logical instructions, jump and call instructions, bit-addressable instructions, programs using all the above instructions and concepts.

UNIT–III	10 Hrs.

Programming peripherals in assembly: Timer and counter programming. Serial Port Programming: Basics of serial communication, 8051 connection to RS232, 8051 serial port programming. Interrupts: 8051 interrupts, Programming timer interrupts.

UNIT–IV	10 Hrs.

Programming external hardware interrupts and serial communication interrupts. Interfacing: Introduction, need for interfacing, interfacing the following devices using assembly-LCD module, ADC808/DAC808, key-pad, stepper motor. Interfacing with the 8255: Programming the 8255, Interfacing the 8255.

Reference Books *

1. Kenneth J. Ayala, "The 8051 Micro controller Architecture, Programming & Applications", Penram International, 2nd Edition,1996

5. Dr.UmaRao and Dr.AndhePallavi, "The 8051 microcontroller architecture, programming and applications", Pearson Education,2010.

Course Outcomes**

After completion of the course student will be able to
   1. **Comprehend the architecture of 8051 microcontroller.**
   2. **Write programs in assembly language for 8051 to explore its capabilities.**
   3. **Program inbuilt peripheral like timer/counter, serial and interrupt peripheral in assembly language.**
   4. **Interface devices like LCD, Keypad, DAC, ADC, Stepper motor and PPI 8255 for different**

applications using assembly language.

* **Books to be listed as per the format with decreasing level of coverage of syllabus**
** **Each CO to be written with proper action word and should be assessable and quantifiable**

Course Outcomes	Programme Outcomes (POs)												Program Specific Outcomes (PSOs)

SUBJECT CODE:21UEC406L	Communication Engineering Laboratory	Credits: 01
L:T:P – 0-0-3		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

LIST OF EXPERIMENTS
1. Design and verification of second order active low pass filter

1. Design and verification of second order active low pass filter
2. Design and verification of second order active high pass filter
3. Design and verification of second order active band pass filter
4. Design and verification of second order active band elimination filter
5. Realization of Amplitude Modulation (AM) and demodulation for a given modulation index
6. Realization of Frequency Modulation (FM)
7. Realization of Pulse Width Modulation (PWM)
8. Realization of Pulse Position Modulation (PPM)
9. Realization of Pulse Amplitude Modulation (PAM)
10. Realization of Pre-emphasis and De-emphasis circuits
11. Realization of frequency demodulation using PLL
12. Generation of PN sequence

Course Outcomes**

After completion of the course student will be able to
1. **Design and verify the frequency response of active filters for a given specifications.**
2. **Design and characterize AM and FM modulation and demodulation circuits.**
3. **Construct pre-emphasis and de-emphasis circuits.**
4. **Verify the PAM, PWM & PPM circuits.**

* **Books to be listed as per the format with decreasing level of coverage of syllabus**
** **Each CO to be written with proper action word and should be assessable and quantifiable**

Course Outcomes	Programme Outcomes (POs)												Program Specific Outcomes (PSOs)		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3

SUBJECT CODE: 21UEC407L	**Microcontroller Laboratory**	**Credits: 01**
L:T:P – 0-0-3		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

UNIT-I	**10 Hrs.**

1. Move an 8-bit data byte to a register/memory using all addressing modes.
2. Block of data transfer in internal RAM locations.
3. Exchange block of data internal/external memory locations.
4. Average of n-eight bit numbers.
5. Programs on basic arithmetic operations.
6. Programs using logical instructions.
7. Search a byte in a given array.
8. Find largest/smallest number in an array.
9. Sorting the given array of numbers in ascending/descending order.
10. Code conversion programs.
11. Addition/multiplication of two matrices.
12. Determine Fibonacci series of a given number.
13. Programs on stack operations.
14. Programs on serial communication.
15. Programs on interrupts.

Part-B

Developing interfacing Embedded 'C' programs in keil cross-compiler, fusing machine code on flash board/Circuit and testing the code.

1. Stepper motor
2. DC motor
3. Buzzer
4. LCD
5. Keypad
6. Analog to Digital Conversion (ADC)
7. Digital to Analog Conversion (DAC)
8. Seven Segment Display (SSD)

Course Outcomes**

After completion of the course student will be able to
1. **Conduct experiments to understand fundamental concepts of 8051 microcontroller.**
2. **Write efficient programs in assembly level language of the 8051 microcontroller.**
3. **Write program to interface different peripherals.**
4. **Develop the embedded C program to perform a defined task.**

* **Books to be listed as per the format with decreasing level of coverage of syllabus**

** Each CO to be written with proper action word and should be assessable and quantifiable

Course Outcomes	Programme Outcomes (POs)												Program Specific Outcomes (PSOs)		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3

SUBJECT CODE: 21UEC408T	Internship - I	Credits: 02
L:T:P – --		CIE Marks: 100
Total Hours/Week: --		SEE Marks: --

Course Plan
Each student shall identify current topic relevance to Electronics and Communication Engineering branch, get approval of concern faculty, undergo the domain specific training, study it thoroughly, apply the skills to develop software/hardware module and prepare own report and present in the class individually.

Course Outcomes**

After completion of the course student will be able to
1. Demonstrate the skills acquired during the internship
2. Develop the small projects (Software/Hardware) by understanding the real time applications.
3. Integrate the different modules developed during the internship.
4. Develop the technical document for the internship.

  * **Books to be listed as per the format with decreasing level of coverage of syllabus**
** Each CO to be written with proper action word and should be assessable and quantifiable

Course Outcomes	Programme Outcomes (POs)												Program Specific Outcomes (PSOs)		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3

SUBJECT CODE: 21UMA400M	Bridge Course Mathematics-II	Credits: --
L:T:P – 3-0-0		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

UNIT-I	10 Hrs.

Differential Equations-1:Ordinary differential equations of first order: Variable seperable, Homogeneous. Exact form and reducible to exact differential equations. Linear and Bernoulli's equation.

UNIT–II	10 Hrs.

Differential Equations-2:Second and higher order linear ODE's with constant coefficients-Inverse differential operator, method of variation of parameters (second order); Cauchy's and Legendre homogeneous equations.

UNIT–III	10 Hrs.

Laplace Transform: Introduction, Definition of Laplace Transform, Laplace Transform of standard functions, Properties: Shifting, differentiation, Integral and division by t. Periodic function, Heaviside's Unit step function.

UNIT–IV	10 Hrs.

Inverse Laplace transforms: Properties, Convolution theorem, Solutions of linear differential equations

Reference Books *

Text Book:
1. SB.S. Grewal: Higher Engineering Mathematics, Khanna Publishers, 44th Edition, 2017.
2. Erwin Kreyszing's Advanced Engineering Mathematics volume I and volume II,wiley India Pvt.Ltd.,2014.
3. H K Das, Higher Engineering Mathematics

Reference Books:
1. Erwin Kreyszing's Advanced Engineering Mathematics,wiley India Pvt.Ltd.,2014.
2. Elementary Differential Equations by Earl D. Rainville and Phillip E, Bedient, Sixth Edition.

Course Outcomes**

After completion of the course student will be able to
1. **Solve first order differential equations of certain types and interpret the solutions.**
2. **Solve second and higher order linear differential equations.**
3. **Apply Laplace transforms for standard functions and its properties**
4. **Apply Inverse Laplace transforms for standard functions**
5. **Apply Inverse Laplace transforms for solve differential equations.**

* **Books to be listed as per the format with decreasing level of coverage of syllabus**
** **Each CO to be written with proper action word and should be assessable and quantifiable**

Syllabus for
B.E. V & VI – Semester
(For students admitted to I year in 2021-22)

SUBJECT CODE: 21UEC501C	Digital Signal Processing	Credits: 03
L:T:P – 3-0-0		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

UNIT-I	10 Hrs.

Discrete Fourier Transform: Frequency domain sampling and reconstruction of discrete time signals, DFT as a linear transformation, its relationship with other transforms, properties: multiplication of two DFTs, circular convolution and additional properties of DFT. Application of DFT in linear filtering: overlap add and overlap save method.

UNIT–II	10 Hrs.

Fast Fourier Transform Algorithms: Need for efficient computation of DFT, Radix 2 FFT algorithms for computation of DFT and IDFT: Decimation in time and decimation in frequency algorithms. Goertzel algorithm and chirp-Z transform algorithm.

UNIT–III	10 Hrs.

IIR filter design: Characteristics of commonly used analog filters – Butterworth and Chebyshev filters. Design of IIR filters from analog filters (i.e. Butterworth and Chebyshev), Transformation techniques: Impulse invariance method, Approximation of derivative (Backward difference and Forward difference) method. Bilinear transformation method.

UNIT–IV	10 Hrs.

FIR filter design: Introduction to FIR filters, Design of FIR filters using windowing (Rectangular, Hamming, Hanning and Bartlet) method, FIR filter design using frequency sampling method. Implementation of discrete time systems - Structures for IIR and FIR systems: Direct form I, Direct form II, Cascade and Parallel realization.

Reference Books *

Textbook:

Reference Books:
1. Oppenheim and Schaffer, "Discrete Time Signal Processing" PHI Publication, III Edition, 2003.

Course Outcomes**

After completion of the course student will be able to
1. **Compute and use DFT for linear filtering applications.**
2. **Calculate DFT and IDFT using FFT and IFFT algorithms.**
3. **Design IIR filters using Butterworth and Chebyshev approximations and draw their structures.**
4. **Design FIR filters using windowing and frequency sampling techniques and draw their structures.**

* Books to be listed as per the format with decreasing level of coverage of syllabus
** Each CO to be written with proper action word and should be assessable and quantifiable

Course Outcomes	Programme Outcomes (POs)												Program Specific Outcomes (PSOs)		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3

SUBJECT CODE: 21UEC502C	**Control Engineering**	**Credits: 03**
L:T:P – 3-0-0		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

UNIT-I	**xx Hrs.**
System modeling: Definition of control system, Concept of feedback and its significance, open loop and closed loop systems, Modeling of Electrical, Mechanical and Electromechanical systems, Differential equations of physical system. Transfer function, Block diagram representation and Reduction technique, Signal flow graph representation and reduction using Mason's gain formula.	
UNIT–II	**xx Hrs.**
Time domain analysis of control systems: Introduction, standard test signals, Unit step response of a second order system, Steady state error analysis, time domain specifications. Stability analysis technique: Concept of stability, Location of Roots in the s-plane for stability, methods of determining stability, Routh-Hurwitz stability criterion.	
UNIT–III	**xx Hrs.**
Root-Locus Technique: Introduction, Procedure for constructing Root-locus. Stability analysis using root locus. Frequency Domain Analysis: Introduction, Bode plots, Gain and Phase cross over frequency, gain margin, phase margin, Frequency domain specifications-resonant peak, resonant frequency, and bandwidth.	
UNIT–IV	**xx Hrs.**
Polar plots, Nyquist stability criterion; Principle of argument, mapping, Nyquist path, Nyquistcriterion, Nyquist Plot and stability analysis. State Space Analysis: Introduction, concept of state and variables, state model, Non homogeneous solution of a state equation.

    6. David. K. Chng, "Analysis of Linear systems", Narosa publishing house, 1996

Course Outcomes**

After completion of the course student will be able to
    1. Mathematically model electrical, mechanical and electromechanical control systems.
    2. Characterize the control systems in time domain.
    3. Analyze stability of a control system using root locus technique and frequency domain analysis using Bode plotting techniques.
    4. Determine the stability of control systems using polar and Nyquist plotting technique and represent the control systems using state space techniques.

* Books to be listed as per the format with decreasing level of coverage of syllabus

NAME OF THE EXPERIMENT

Design following CMOS/TG based circuits with given specifications* and complete the VLSI design flow mentioned below using appropriate tool:

a) Draw the schematic and verify the following
   i) DC Analysis ii)Transient Analysis
b) Draw the Layout and verify the DRC,ERC
c) Check for LVS
d) Extract RC and back annotate the same and verify the design.

1) CMOS inverter
2) CMOS two input NAND gate
3) CMOS two input NOR gate
4) CMOS two input OR gate
5) CMOS two input AND gate
6) TG based two input XOR and XNOR gates
7) Negative edge triggers D flip flop using TGs and inverters
8) 4:1 MUX using TGs and inverters
9) 3- Bit up counter
10) 3-Bit SISO shift register

An appropriate constraint should be given

Course Outcomes**

After completion of the course student will be able to
    1.   Design CMOS/ TG based gates, MUX, flipflops, counters and shift register.
    2.   Draw the layout, run DC and transient analysis for designed CMOS standard cells.

    * **Books to be listed as per the format with decreasing level of coverage of syllabus**
    ** **Each CO to be written with proper action word and should be assessable and quantifiable**

Total Hours/Week: 03		SEE Marks: 50

UNIT-I	xx Hrs.

Introducing classes, Objects and Methods: Introducing Classes, Class Fundamentals, The GeneralForm of a Class, A Simple Class, Declaring Objects, A Closer Look at new, Assigning Object Reference Variables, Introducing Methods, Adding a Method to the Box Class, Returning a Value, Adding a Method That Takes Parameter , Constructors, Parameterized Constructors, The this Keyword, The finalize( ) Method, A Stack Class. A Closer Look at Methods and Classes : Overloading Methods , Overloading Constructors, Using Objects as Parameters, A Closer Look at Argument Passing, Returning Objects, Recursion, Introducing Access Control, Understanding static, Introducing final, Arrays Revisited, Introducing Nested and Inner Classes, Exploring the String Class, Using Command Line Arguments.

UNIT–II	xx Hrs.

Inheritance: Inheritance, Inheritance Basics, Member Access and Inheritance, Example, A Super class Variable Can Reference a Subclass Object, Using super, Using super to Call Super class Constructors, A Second Use for super, Creating a Multilevel Hierarchy, When Constructors Are Called, Method Overriding, Dynamic Method Dispatch, Why Overridden Methods?, Applying Method Overriding. Using Abstract Classes, Using final with Inheritance, Using final to Prevent Overriding, Using final to Prevent Inheritance, The Object Class. Packages and Interfaces: Packages, Defining a Package, Finding Packages and CLASS PATH, A Short Package Example, Access Protection, An Access Example, Importing Packages, Interfaces, Defining an Interface, Implementing Interfaces, Nested Interfaces.

UNIT–III	xx Hrs.

Exception Handling : Exception-Handling Fundamentals, Exception Types, Uncaught Exceptions, Using try and catch, Displaying a Description of an Exception, Multiple catch Clauses , Nested try Statements, throw, throws, finally, Java's Built-in Exceptions , Creating Your Own Exception Subclasses, Using Exceptions . Multithreaded Programming : The Java Thread Model, Thread Priorities, Synchronization, Messaging, The Thread Class and the Runnable Interface, The Main Thread, Creating a Thread, Implementing Runnable, Extending Thread, Creating Multiple Threads, Using is Alive( ) and join( ).

UNIT–IV	xx Hrs.

Multithreaded Programming Continuous: Thread Priorities, Inter thread Communication, Deadlock, Suspending, Resuming, and Stopping Threads, Suspending, Resuming, and Stopping Threads. The Applet Class :Two Types of Applets, Applet Basics, The Applet Class, Applet Architecture, An Applet Skeleton, Applet Initialization and Termination, Overriding update( ), Simple Applet Display Methods, A Simple Banner Applet, Using the Status Window, The HTML APPLET Tag, Passing Parameters to Applets, get Document Base( ) and get Code Base( ), Applet Context and show Document( ), The Applet Stub Interface .

Course Outcomes**

After completion of the course student will be able to
   1. Use fundamentals of class, objects, methods, operators, constructors.
   2. Write programs using Inheritance, Super class, methods overriding, object class, final key,packages & interfaces in java code.
   3. Handling Exceptions fundamentals, exception hierarchy, exception JAVA Programming fundamentals & Multithreaded Programming concepts.
   4. Establish Inter thread communication, set thread priorities, solve deadlock , operations of suspend(),resume(), Stop(). Programming for applets.

   * **Books to be listed as per the format with decreasing level of coverage of syllabus**
   ** **Each CO to be written with proper action word and should be assessable and quantifiable**

SUBJECT CODE: 21UEC506E	Digital System Design using Verilog	Credits: 03
L:T:P – 3-0-0		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

UNIT-I	10 Hrs.

Introduction to Verilog: Introduction, Computer-Aided Design, Hardware Description Languages, Verilog Description of Combinational Circuits, Verilog Modules, Verilog Assignments, Procedural Assignments, Modeling Flip-Flops Using Always Block, Always Blocks Using Event Control Statements, Delays in Verilog, Compilation, Simulation, and Synthesis of Verilog Code, Verilog Data Types and Operators, Simple Synthesis Examples, Verilog Models for Multiplexers, Modeling Registers and Counters Using Verilog Always Statements, Behavioral and Structural Verilog, Constants, Arrays,

UNIT–II	10 Hrs.

Introduction to Verilog cont.: Loops in Verilog, Testing a Verilog Model.
Design Examples: Introduction, BCD to 7-Segment Display Decoder, A BCD Adder, 32-Bit Adders, Traffic Light Controller, State Graphs for Control Circuits, Scoreboard and Controller, Synchronization and De-bouncing, A Shift-and-Add Multiplier, Array Multiplier, A Signed Integer/Fraction Multiplier, Keypad Scanner, Binary Dividers.

UNIT–III	10 Hrs.

Additional Topics in Verilog: Introduction, Verilog Functions, Verilog Tasks, Multivalued Logic and Signal Resolution, Built-in Primitives, User-Defined Primitives, SRAM model, Model for SRAM Read/Write System, Rise and Fall Delays of Gates, Named Association, Generate Statements, System Functions, Compiler Directives, File I/O Functions, Timing Checks.
Hardware Testing and Design for Testability: Introduction, Testing Combinational Logic, Testing Sequential Logic, Scan Testing, Boundary Scan, Built-In Self-Test.

UNIT–IV	10 Hrs.

Component Test and Verification: Test-bench, Combinational circuit testing, Sequential circuit testing, Test-bench Techniques, Simulation control, Limiting data sets, Applying synchronized data, Synchronized display of results, An interactive test-bench, Random time intervals, Buffered data application, Design Verification, Assertion Verification, Assertion verification benefits, Open verification library, Using assertion monitors, Assertion templates

6) Bhasker, Jayaram. "A Verilog HDL Primer". Star Galaxy Publishing,1999.

Course Outcomes**

After completion of the course student will be able to write
1. **Verilog code for combinational and sequential circuits.**
2. **Verilog code for a simple digital system for given specifications using different design styles.**
3. **Verilog code using advanced Verilog Concepts.**
4. **Develop Test benches to automate simulation and verification of design.**

* **Books to be listed as per the format with decreasing level of coverage of syllabus**
** **Each CO to be written with proper action word and should be assessable and quantifiable**

SUBJECT CODE: 21UEC507E	Mobile Communications	Credits: 03
L:T:P - N$_L$:02 N$_T$:00 N$_P$:00		CIE Marks: 50
Total Hours/Week: 02		SEE Marks: 50

UNIT-I	10 Hrs.

Wireless standard organizations. Wireless transmission: Frequencies for radio communication, signals, antennas, signal propagation. Medium access control: Motivation for specialized MAC, SOMA, FDMA, TOMA, CDMA.

UNIT–II	10 Hrs.

Telecommunication systems: GSM, UMTS and IMT2000, 4GLTE networks, 5G networks over view. Broadcast system: Overview, cyclical repetition of data, digital audio broadcasting, and digital video broadcasting.

UNIT–III	10 Hrs.

Wireless LAN: IEEE802.11 system architecture, protocol architecture, physical layer, medium access controller, MAC management. 802.11b. and 802.11a. Bluetooth: user scenarios, architecture, radio layer.

UNIT–IV	10 Hrs.

Mobile network layer dynamic host configuration protocol, mobile Ad-hoc network. Mobile transport layer: Traditional TCP , classical TCP improvement, TCP over2.5/3G wireless network, performance enhancing proxies.

Reference Books *

1. Jochen Schiller, 2003 "Mobile Communications", second edition PearsonEducation.
2. Gary Mullett, 2006 "Introduction to wireless telecommunication systems and networks ", First Edition Cengage learning

Course Outcomes**

After completion of the course student will be able to
1. identify the different mobile accessing techniques.
2. Identify the different architecture of mobile communications
3. Design and develop the different configurations of LAN systems.
 4. Develop different network layer and transport layer protocols.

Course Outcomes	Programme Outcomes (POs)												Program Specific Outcomes (PSOs)		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3

SUBJECT CODE: 21UEC535N	Communication Systems	Credits: 03

L:T:P – 3-0-0		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

UNIT-I	**xx Hrs.**

Introduction to Communication Systems: Elements of Communication Systems, Need for Modulation, Electromagnetic Spectrum and typical applications, Terminologies in communication systems.

Amplitude Modulation Techniques: Elements of analog communication, Theory of amplitude modulation techniques, Generation of amplitude modulated signals.

UNIT–II	**xx Hrs.**

Angle Modulation Techniques: Theory of angle modulation techniques, Frequency modulation, Practical issues in frequency modulation, Comparison of FM and AM, Generation of frequency modulation: Transistor reactance modulator, Varactor diode modulator, Stabilized reactance modulator-AFC.

Pulse Modulation Techniques: Introduction, Pulse analog modulation techniques, Pulse digital modulation techniques

UNIT–III	**xx Hrs.**

Digital Modulation Techniques: Introduction, Basic digital modulation schemes, M-ary digital modulation techniques.

Radio Transmitters and Receivers: Introduction to radio communication, Radio transmitters: AM Transmitters, SSB Transmitters, FM Transmitters, Superheterodyne receiver, Single and Independent Side Band Receivers, Slope detection, stereo FM multiplex reception

UNIT–IV	**xx Hrs.**

Broadband Communication Systems: Multiplexing, Short and medium haul systems, Long haul systems.

Introduction to Fiber Optic Technology: History of fiber optics, introduction to light, The Optical fiber and fiber cables, Fiber optic components and systems.

Reference Books *

1. George Kennedy, Bernard Davis, S R M Prasanna, "Electronic Communication Systems", Tata McGraw Hill Education Private Limited, New Delhi, 5th Edition
2. B. P. Lathi, Zhi Ding, "Modern Digital and Analog Communication Systems", Oxford University Press, 4th Edition, 2010
3. Simon Haykin, "Digital communications", John Wiley, 2014

Course Outcomes**

After completion of the course student will be able to
1. **Understand and analyze communication systems and amplitude modulation techniques.**
2. **Visualize angle and pulse modulation systems.**
3. **Explain different digital communication systems and radio transmitters/receivers.**
4. **Categorize broadband and optical fiber communication systems.**

* Books to be listed as per the format with decreasing level of coverage of syllabus
** Each CO to be written with proper action word and should be assessable and quantifiable

SUBJECT CODE: 21UEC532N	Digital Electronics and Microcontrollers	Credits: 03
L:T:P – 3-0-0		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

UNIT-I	xx Hrs.

Combinational Logic Circuits: Definition of combinational circuit, design procedure, half adder, full adder, half subtractor, full subtractor, parallel adder, decoder, encoder, comparator (1& 2 bit), multiplexer, demultiplexer.

UNIT–II	xx Hrs.

Microprocessors and Microcontrollers: Introduction, comparison between microprocessors and microcontrollers, Z80 and 8051, 4-bit to 32-bit microcontrollers. 8051 Architecture: General features of 8051 Microcontroller, 8051 block diagram, programming model, pin description, 8051 oscillator and clock, general purpose and special function registers, internal RAM and ROM, stack, input/output pins, basics of input output port

UNIT–III	xx Hrs.

8051 Instructions and Programming: addressing modes, types of instructions, instruction set, and data move instructions, external data move instructions, arithmetic instructions, logical instructions, jump and call instructions, bit-addressable instructions, programs using all the above instructions and concepts.

UNIT–IV	xx Hrs.

Programming peripherals in assembly: Timer and counter programming (mode 1). Serial Port Programming: Basics of serial communication, 8051 serial port programming. Interrupts: 8051 interrupts, Programming timer interrupts.

Reference Books *

1. Donald D Givone, "Digital principle and design", Tata McGraw Hill edition, 2002
2. Kenneth J. Ayala, "The 8051 Micro controller Architecture, Programming & Applications", Penram International, 2nd Edition,1996
3. Muhammad Ali Mazidi, Janice Gillispie Mazidi, "The 8051 Micro controller and Embedded Systems", Pearsons Education, 2nd edition, 2007. John M Yarbrough, "Digital logic applications and design", Thomson learning, 2001.

5. Dr.Uma Rao   and   Dr. Andhe   Pallavi,   "The   8051   microcontroller architecture, programming and applications", Pearson Education, 2010.
6. David Calcutt, Fredcwon, "8051 microcontroller", Elsevier, 1st Edition, 2004.

Course Outcomes**

After completion of the course student will be able to
1. **Proficient in defining, classifying, and analyzing combinational circuits and demonstrate the ability to design and implement various basic combinational circuits effectively.**
2. **Acquire a comprehensive understanding of microprocessors and microcontrollers and capable of analyzing the architecture and general features of the 8051 microcontroller, including its programming model, pin description, oscillator, clock, registers, and memory organization.**

3. **Develop programming skills in writing assembly programs that involve data manipulation, arithmetic operations, logical functions, jump, call instructions, and bit- addressable instructions.**
4. **Gain expertise in programming timers and counters for timekeeping and event counting, serial port communication, enabling data transmission and reception in various applications and handling interrupts for event-driven programming.**

* **Books to be listed as per the format with decreasing level of coverage of syllabus**
** **Each CO to be written with proper action word and should be assessable and quantifiable**

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING
Outcome Based Education (OBE) and Choice Based Credit System (CBCS)
SEMESTER – VII
Internship

Course Code:	21UEC510I	CIE Marks	70
Teaching Hours/Week (L:T:P)	--	SEE Marks	30
Credits	02	Hours	30 Min/Student

I. Internship:
Students need to meet following criteria to successfully complete the internship course.

II. Course objectives:
This objective of the course are
- Enhance student's knowledge of a particular area(s) of Electronics and Communication Engineering.
- Experience integration of theory and practice existing in IT Industries.
- Develop systematic work culture and skills necessary for successful professional career.
- Build the abilities such as working in diverse areas, self learning, lifelong learning and technical documentation and reporting.

III. Components of Internship
1. Student's Diary/ Daily Log
Student's Diary and Internship Report should be submitted by the students along with attendance record and an evaluation sheet duly signed and stamped by the industry to the Institute immediately after the completion of the training. It will be evaluated based on the following criteria:
- Regularity in maintenance of the diary.
- Adequacy & quality of information recorded.
- Drawings, sketches, and data recorded.
- Thought process and recording techniques used.
- Organization of the information.

2. Internship Report
The Internship report will be evaluated based on following criteria:
- Originality.
- Internship certificate from the industry.
- Adequacy and purposeful write-up.

- Organization, format, drawings, sketches, style, language etc.
- Variety and relevance of learning experience.
- Practical applications, relationships with basic theory and concepts taught in the course

IV. Course outcomes:

After completion of the course the student will be able to:

1. Demonstrate the skills gained during the internship at the industry, through simulation/actual implementation.
2. Solve simple real time problems associated in their field of internship.
3. Exhibit abilities to use theoretical concepts in solving practical problems in their field of study.
4. Document and present technical matter to fellow colleagues effortlessly.

V. Evaluation:

The industrial training of the students will be evaluated in three stages:
1. Evaluation by Industry.
2. Evaluation through seminar presentation
3. Viva-voce at the Institute.

Evaluation Through Seminar Presentation/Viva-Voce at The Institute
The student has to give a seminar based on his/her training, before an expert committee constituted by the concerned department as per norms of the institute. The evaluation will be based on the following criteria:
- Quality of content presented.
- Proper planning for presentation.
- Effectiveness of presentation.
- Depth of knowledge and skills.
- Attendance record, daily diary, departmental reports shall also be analysed along with the Internship Report

Evaluation Criteria

Summary of Internship Evaluation	
Guide at the Industry	
Evaluation Criteria	**Marks**
Quality of Work	10
Ability to Learn	10
Initiative and Creativity	10
Character Traits	10
Dependability	10
Organizational Fit	10
Response to Supervision	10
Total (A)	**70**
Department Committee(Faculty Advisor+External+HoD/Nominee)	
Demonstration of experience	10
Report	10
Presentation	10
Total (B)	**30**
Total Score (A+B)	**100**

Course Articulation Matrix: Mapping of Course Outcomes (CO) with Programme Outcomes (PO) andProgramme Specific Outcomes (PSO)

No	Programme Outcomes / Course Outcomes	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3
The students will be able to:																
1	Demonstrate the skills gained during the internship at the industry, through simulation/actual implementation.	3	2	2	2	3	3	3	1	3	3	3	3	1	1	1
2	Solve simple real time problems associated in their field of internship.	3	2	2	2	3	3	3	1	3	3	3	3	1	1	1

4	Document and present technical matter to fellow colleagues effortlessly.	3	2	2	2	3	3	3	1	3	3	3	3	1	1	1

Evaluation of Internship – Grading Rubrics for Industry

Evaluation Dimensions	Performance Rating			Maximum Score
	Needs Improvement 0-4	**Meets Expectations** 5-7	**Excellent** 8-10	
Internship Evaluation Dimensions – Grading Criteria				
Quality of Work	Work was done in a careless manner and was of erratic quality; Work assignments were usually late and required review; Made numerous errors	With a few minor exceptions, adequately performed most work requirements; Most work assignments submitted in a timely manner; Made occasional errors	Thoroughly and accurately performed all work requirements; Submitted all work assignments on time; Made few if any errors	10
Ability to Learn	Asked few questions and rarely sought out additional information Unable or slow to understand new concepts, ideas, and work assignments; Unable or unwilling to recognize mistakes and was not receptive to making needed changes and improvements	Asked relevant questions and sought out additional information from appropriate sources; Acceptable understanding of new concepts, ideas, and work assignments; Willing to take responsibility for mistakes and to make needed changes and improvements	Consistently asked relevant questions and sought out additional information from appropriate sources; Quickly understood new concepts, ideas, and work assignments; Always willing to take responsibility for mistakes and to make needed changes and improvements	10

Initiative and Creativity	Had little observable drive and required close supervision; Showed little interest in meeting standards; Did not seek out additional work and frequently procrastinated in completing assignments; suggested no new ideas or options	Worked without extensive supervision; Found problems to solve and sometimes asked for additional work assignments; Set his/her own goals and, tried to exceed requirements; offered some creative ideas	A self-starter; Consistently sought new challenges and asked for additional work assignments; Regularly approached and solved problems independently; Frequently proposed innovative and creative ideas, solutions, and/or options	10
Character Traits	Regularly exhibited a negative attitude; Dishonest and/or showed a lack of integrity on several occasions; Unable to recognize and/or was insensitive to ethical and diversity issues; Displayed significant lapses in ethical and professional behavior	Except in a few minor instances, demonstrated a positive attitude; Regularly exhibited honesty and integrity in the workplace; Usually aware of and sensitive to ethical and diversity issues on the job; Normally behaved in an ethical and professional manner	Exceptionally positive attitude; Consistently exhibited honesty and integrity in the workplace; Keenly aware of and deeply sensitive to ethical and diversity issues on the job; Always behaved in an ethical and professional manner	10

Evaluation Dimensions	Performance Rating			Maximum Score
	Needs Improvement	**Meets Expectations**	**Excellent**	
	0-4	**5-7**	**8-10**	
Internship Evaluation Dimensions – Grading Criteria				
Dependability	Generally unreliable in completing work assignments; Did not follow instructions and procedures promptly or accurately; Careless, and work needed constant follow-up; required close supervision	Generally reliable in completing tasks; Normally followed instructions and procedures; Usually attentive to detail, but work had to be reviewed occasionally; Functioned with only moderate supervision	Consistently reliable in completing work assignments; Always followed instructions and procedures well; Careful and extremely attentive to detail; Required little or minimum supervision	10

Organizational Fit	Unwilling or unable to understand and support the organization's mission, vision, and goals; Exhibited difficulty in adapting to organizational norms, expectations, and culture; Frequently seemed to disregard appropriate authority and decision-making channels	Adequately understood and supported the organization''s mission, vision, and goals; Satisfactorily adapted to organizational norms, expectations, and culture; Generally functioned within appropriate authority and decision-making channels	Completely understood and fully supported the organization''s mission, vision, and goals; Readily and successfully adapted to organizational norms, expectations, and culture; Consistently functioned within appropriate authority and decision-making channels	10
Response to Supervision	Rarely sought supervision when necessary; Unwilling to accept constructive criticism and advice; Seldom implemented supervisor suggestions; Unwilling to explore personal strengths and areas for improvement	Sought supervision when necessary; Receptive to constructive criticism and advice; Implemented supervisor suggestions in most cases; Willing to explore personal strengths and areas for improvement	Actively sought supervision when necessary; Always receptive to constructive criticism and advice; Successfully implemented supervisor suggestions when offered; Always willing to explore personal strengths and areas for improvement	10

Evaluation of Internship – Grading Rubric for Department Evaluation Committee/Faculty				
Evaluation Dimensions	**Performance Rating**			Maximum Score
	Needs Improvement	**Meets Expectations**	**Excellent**	50
	0-4	**5-7**	**8-10**	
Internship Evaluation Dimensions – Grading Criteria				
Demonstration of experience	Offers little in the way of illustrating experiences Fails to adequately address how the experiences relate to the competencies.	Addresses the Activities and experiences, but not so clearly and concisely	Well addressed activities and experiences as well as relating them to the program competencies.	10

Report	Unedited and difficult to read It is littered with grammatical and typographical errors, demonstrating little effort to producing a quality report. No reference is made to practical application. Lacks evidence and internship experience	Well-written for the most part but still has somewhat detracting errors that could have been fixed with additional editing prior to submission. Key concepts related to the selected evidence and internship experience are inaccurate or incomplete. Some helpful practical applications are included.	Has been carefully edited and is free or nearly free of any grammatical or typographical errors. Well-organized report is easy to read and understand and stands alone as a quality piece of writing. An accurate and complete reflection of key concepts related to the selected evidence and internship experience Practical applications are included to illuminate issues.	10
Presentation	Information is lacking/unclear and communicated in such a way that the audience cannot understand the purpose of the evidence work and internship experiences.	Information is presented in a clear manner but still lacks practical experience	Information is communicated in a thorough manner and ideas are expressed in such a way that the audience can clearly understand the evidence work and internship experiences.	10

SUBJECT CODE: 21UBT523C	**Environmental Studies**	Credits: 01
L:T:P – 1-0-0		CIE Marks: 50
Total Hours/Week: 01		SEE Marks: 50

UNIT-I	04 Hrs.

Natural Resources: Human activities and their impacts. **Energy**: Solar energy, Wind energy, Hydropower, Tidal energy, Ocean thermal energy, Geo thermal energy, Biomass energy, Biogas, Biodiesel, Bioethanol, Hydrogen as fuel. **Non renewable Energy**: Coal, Petroleum, Natural gas, Nuclear energy.

UNIT–II	04 Hrs.

Environmental Pollution: Water pollution, water quality standards, water borne diseases, Fluoride problem, Air pollution, Noise pollution. Effect of electromagnetic waves.
Sustainable future: Concept of sustainable development, threats to sustainability, strategies for sustainable development. Environment economics – concept of green building, clean development mechanism (CDM).

UNIT–III	03 Hrs.

Current Environmental Issues of concern: 03 hours Greenhouse Effect- Greenhouse gases and Global Warming, Climate change, ozone layer depletion, Acid rain, Eutrophication, Environmental policy legislation rules & regulations

UNIT–IV	04 Hrs..

Fundamentals of Waste management: 04   hours   Solid   waste   management: Sources, classification, characteristics, collection & transportation, disposal, and processing methods. Hazardous waste management and handling. Concept of waste water treatment, Bioremediation, Industrial waste management (Case studies: Cement, plastic, chemical, E–waste, food & construction industry waste management).

Reference Books *

2. Dr. D. L. Manjunath, "Environmental Studies" Pearson Education, 2006
3. Koushik and Koushik "Environmental Science & Engineering" New Age International Publishers, New Delhi, 2006
4. Meenakshi "Environmental Science & Engineering" Pranticce Hall of India, 2006

Course Outcomes**

After completion of the course student will be able to
1. **Ability to recognize natural resources and its uses.**
2. **Able to understand pollution and its effects on environment and to implement sustainable future in the work place.**
3. **Ability to understand current environmental issues.**
4. **Able to apply the waste management techniques in various fields**

* Books to be listed as per the format with decreasing level of coverage of syllabus
** Each CO to be written with proper action word and should be assessable and quantifiable

SUBJECT CODE: 21UHS521C	Quantitative Aptitude and Professional Skills	Credit: 02
L:T:P - 2 : 0: 0		CIE Marks: 50
Total Hours/Week:02		SEE Marks: 50

Course Objectives:
1. To develop and augment written English language vocabulary and comprehension skills
2. To augment the ability to understand and analyse a problem and find its solution through analysis of data given
3. To fine-tune the quantitative analysis and problem-solving skills

UNIT-I	08 Hrs.
Vocabulary Development: Vocabulary Building Techniques, Root Words, Antonyms & Synonyms, Sentence Completion, Error Detection & Correction, Reading Comprehension	
UNIT–II	**08 Hrs.**
Numbers, Proportion & Finance: Number System, Factors & Multiples, The God of Math – Linear Equations, Ratio-Proportion-Variation, Percentages, Profit & Loss, Interest, Averages & Alligations	
UNIT–III	**07 Hrs.**
Time & Probability: Time & Work, Time Speed, & Distance, Permutations & Combinations, Probability	
UNIT–IV	**07 Hrs.**
Verbal, Analytical, and Visual Reasoning: Human Relations, Direction Tests, Coding Decoding, Clocks and Calendars, Visual Reasoning, Analytical Puzzles, Mathematical, Arrangement & Classification Puzzles

Course Outcomes

After active participation in this course, the student will have
CO1: Enhanced his/her vocabulary and learnt techniques to augment it further
CO2: Learned the techniques to augment his/her verbal ability
CO3: Understood step-by-analysis of the given problem and learnt to develop a method for solving it
CO4: Enhanced and augmented his/her ability to work with quantitative problems

SUBJECT CODE: 21UEC601C	Information Theory and Coding	Credits: 03
L:T:P - 3 :0: 0		CIEMarks:50
Total Hours/Week: 03		SEEMarks:50

UNIT-I	10 Hrs.

Information theory: Introduction, measure of information, average information content of symbols in long independent sequences, average information content of symbols in long dependent sequences, Markov statistical model for information source, entropy and information rate of Markov source.
Source Coding: Properties, Shannon's encoding algorithm, Shannon-Fano encoding algorithm, Huffman Coding.

UNIT–II	10 Hrs.

Communication channels: Discrete communication channels, entropy functions and equivocation, mutual information, properties of mutual information, rate of information transmission over a discrete channel, capacity of a discrete memory less channel, Shannon's theorem on channel capacity, channel efficiency and redundancy, symmetric/uniform channel, binary symmetric channel, binary erasure channel. Shannon-Hartley law and its implications.

UNIT–III	10 Hrs.

Error control coding: Introduction, types of errors, examples of error control coding, methods for controlling errors, types of codes. **Linear Block Codes:** Matrix description of LBC, encoding circuit for (n, k) linear block codes, syndrome and error correction, syndrome calculation circuit, Hamming weight, Hamming distance and minimum distance of LBC, error detection and correction capability of LBCs, standard array.

UNIT–IV	10 Hrs.

Binary Cyclic Codes: Algebraic structure of cyclic codes, encoding using (n, k) bit shift register, syndrome calculation, error detection and correction.
Convolution codes: Connection pictorial representation, time and transform domain approach, systematic convolution codes, **Structural properties of convolution codes:** State diagram, code tree, trellis diagram.

Reference Books *

1. P.S. Satyanarayana,2004, Concepts of information theory and coding (2nd edition)Dynaram**.**
2. Bernard Sklar,2002, Digital communication fundamentals and applications (2nd edition) Pearson education.
3. K. Sam Shanmugam, 1996, Digital and analog communication systems**,** John Wiley.
4. Simon Haykin,2003, Digital communication**,** John Wiley.

Course Outcomes**

After completion of the course student will be able to
1. Demonstrate the basic information theory concepts, entropy, need of coding and working of
2. different types of source coding techniques.
3. Derive channel capacity expression for different types of discrete communication channels and describe entropy functions, equivocation, mutual information of communication channel.
4. Design an encoder, decoder, and error correction circuit for linear block code.
5. Design an encoder, decoder and error correction circuit for cyclic code and demonstrate encoding of convolutional codes, also verify its structural properties using code tree and trellis diagram.

***Books to be listed as per the format with decreasing level of coverage of syllabus**
** Each CO to be written with proper action word and should be assessable and quantifiable

Course Outcomes	Programme Outcomes (POs)												Program Specific Outcomes (PSOs)		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3

CO2	3	2	1	0	0	1	0	0	0	0	0	0	3	0	0
CO3	3	3	2	0	1	1	1	0	0	0	0	0	3	0	0
CO4	3	3	2	0	1	1	1	0	0	0	0	0	3	0	0

SUBJECT CODE: 21UEC602C	**Electromagnetic Theory**	**Credits: 03**
L:T:P - 2 : 2 : 0		CIE Marks: 50
Total Hours/Week: 04		SEE Marks: 50

UNIT-I	**10 Hrs.**

Coulomb's Law and electric field intensity: Introduction to coulomb's law, field intensity, field due to continuous volume charge distribution, Field of a line charge & field of sheet charge, Electric flux density Gauss law and divergence: Electric flux density, Gauss law, Application of Gauss law for symmetrical charge distribution (point charge, Coaxial cable) and differential volume element, Divergence, Maxwell's first equation, vector operator deltand divergence theorem.

UNIT–II	**10 Hrs.**

Energy and potential: Energy expended in moving a point charge in an electric field, the line integral, definition of potential difference and potential, the potential field of a point charge, potential field of system of charges, potential gradient, Energy density in an Electrostatic Field.
Conductors, dielectrics and capacitance: Current and current density, continuity of current, conductor properties and boundary conditions, boundary conditions for perfect dielectrics, capacitance and examples (Parallel plate capacitor, Dielectric boundary normal to plates).

UNIT–III	**10 Hrs.**

Poisson's and Laplace's equations: Poisson's and Laplace's equations. Uniqueness theorem, examples of the solution of Lapalce and poisson's equations.
The steddy Magnetic Field:Biot-savart's law, Ampere's Circuital Law, curl, stokes theorem, magnetic flux density, scalar and vector magnetic potentials.

UNIT–IV	**10 Hrs.**

Time varying fields and Maxwell's equations: Faraday's Law, Displacement Current, Maxwell's equation in point and integral form, retarded potentials.
Uniform Plane Wave: Wave Propagation In free space an Dielectrics, Poynting's Theorem and wave power, Plane wave in boundaries and in dispersive media: Reflection Uniform Plane Wave At normal incidence, SWR.

Reference Books *

1. WilliamHHaytJr,JohnABuck,"EngineeringElectronics",TataMcGraw-Hill,7th edition, 2006

3. DavidKCheng,"FiledandwaveElectromangetics"PearsoneducationAsia,2nd edition,-1989,   Indian Reprint-2001.

Course Outcomes**

After completion of the course student will be able to
1. Understand the concept of scalar, vectors, Coulombs law, Electric filed intensity,Gauss law and its applications, divergence and analyze the problems based on the mentioned laws
2. Understand potential due to charges, potential gradient, continuity equation, boundary conditions and capacitance and Analyze the problems based on the mentioned laws
3. Understand Poisson's, Laplaces equation and its application, Uniqueness theorem, Biot-savart's law, ampere's law, stokes theorem and Curl with respect to magnetic fields and analyze the problems related to the mentioned laws
4. Understand about time varying fields, Maxwell's equation, retarded potential, wave propagation in free space, Poynting's theorem, uniform plane waves, Polarization of plane waves, Standing Wave Ratio (SWR) and analyze the problems based on the mentioned laws.

* Books to be listed as per the format with decreasing level of coverage of syllabus

2.AndrewS.Tanenbaum,"Computer Networks",Prentice-Hall,2010.
3.William Stallings,"DataandComputerCommunications",Prentice-Hall,2007.

Course Outcomes**

After completion of the course student will be able to
1. **Master the terminology and concepts of the OSI reference model and the TCP/IP reference model**
2. **Master the concepts of protocols, network interfaces, and design/performance issues in local area networks and wide area networks**
3. **Identify, compare and contrast different techniques and design issues of core functions such as addressing, routing, internetworking, switching, multiplexing, error and flow control, medium access and coding.**
4. **Become familiar with Widely-used Internet protocols lichas TCP/IP,UDP,etc.**

* **Books to be listed as per the format with decreasing level of coverage of syllabus**
** **Each CO to be written with proper action word and should be assessable and quantifiable**

L:T:P - 0 : 0 : 2		CIE Marks: 50
Total Hours/Week: 02		SEE Marks: 50

Sl.No.	LISTOF EXPERIMENTS
1.	Study of different types of network cables and practically implement the cross-wired cable and straight through cable using clamping tool
2.	Study of network components/devices:i)NICii)Hubiii)Switch
3.	Connecting computers on Local Area Network(LAN)
4.	Study of packet tracer
5.	Configuration of different network topologies using packet tracer
6.	Configuration of switch and establishing LAN using packet tracer
7.	Creation of Virtual LAN(VLAN)using packet tracer
8.	Configuration Of Basic Routing Using Packet Tracer
9.	Configuration of a network using Routing Information Protocol(RIP)using packet tracer
10.	Configuration of a network using Open Shortest path First(OSPF)using packet tracer
11.	Configuration of DHCP using packet tracer
12.	Configuration of NAT using CISCO packet tracer

Course Outcomes**

After completion of the course student will be able to
1. To Apply the concepts of Data Communication and Networking
2. To do Internetworking & devices
3. To Develop New Routing techniques
4. Practically Know The Functionality of devices using RIP, OSPF, DHCP,and NAT

* **Books to be listed as per the format with decreasing level of coverage of syllabus**

Sl.No.	LIST OF EXPERIMENTS
1.	Verification Of The Sampling Theorem
2.	Generation and detection of ASK signal
3.	Generation and detection of FSK signal
4.	Generation and detection of PSK signal
5.	Study of radiation pattern of DIPOLE antenna
6.	Study of radiation pattern of HORN antenna
7.	Study of radiation pattern of YAGI-UDA antenna
8.	Measurement of frequency and wavelength of a microwave source
9.	Study the mode characteristics of Reflex klystron
10.	Measurement of coupling factor, insertion loss and directivity of a Directional Coupler
11.	Study of Magic Tee and its characteristics
12.	Study of V-I characteristics of Gunn diode and Gunn diode as an oscillator
13.	To Study the characteristics of low pass and high pass microstrip filter
14.	To Study the characteristics of band pass and band stop microstrip filters
15.	To study the characteristics of ring resonator in microstrip
16.	To study and plot the radiation pattern of microstrip patch antenna

Course Outcomes**

After completion of the course student will be able to
1. Design and test the digital modulation techniques and analyze the waveforms
2. Determine The Radiation Pattern Of Different Antennas
3. Determine the characteristics and response of microwave devices
4. Determine the characteristics of micro strip antennas and devices and compute the parameters associated with it

* **Books to be listed as per the format with decreasing level of coverage of syllabus**

SUBJECT CODE: 21UEC606E	Biomedical Signal Processing	Credits: 03
L:T:P - 3 : 0 : 0		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

UNIT-I	10 Hrs.

Introduction to Biomedical Signal: The nature of biomedical signals, objectives of biomedical signal analysis, difficulties encountered in biomedical signal analysis, Computer aided diagnosis.
Neurological Signal processing: Brain and its potentials, Electrophysiological origin ofBrain waves, EEG signal and its characteristics, EEG analysis, Linear prediction theory, Autoregressive (AR)method, Recursive Estimation of AR parameters, Spectral error measure, Adaptive segmentation.

UNIT–II	10 Hrs.

Filtering for Removal of Artifacts: Random noise, structured noise and physiological interference, stationary versus non-stationary processes, typical case study, Time domain filters with application: Synchronized averaging, moving-average filters. Frequency domain filters with examples: removal of high frequency noise by Butterworth low pass filters, removal of low frequency noise by Butterworth high pass filter, removal of periodic artifacts by notch and comb filters. Optimal filtering: Weiner filter.

UNIT–III	10 Hrs.

Signal Averaging: Basics of signal averaging, Signal averaging as a digital filter, A typical average, Software for signal averaging, Limitations of signal averaging.
DataAcquisitionandclassificationofsleepstages,TheMarkovmodelandMarkovchains,DynamicsofSleep-wakeTransitions,HypnogramModelParameters.
CardiologicalSignalProcessing:ECGParametersandtheirestimation

UNIT–IV	10 Hrs.

Adaptive Interference/Noise Cancellation: A review of wiener filtering problem, Principle Of an adaptive filter, the steepest descent algorithm, Adaptive noise canceller, Cancellation of 60Hz Interference in ECG, Canceling Donor heart Interference in Heart-transplant ECG, Cancellation of Electrocardiographic signals from the electrical activity of chest muscles, Canceling of maternal ECG in Fetal ECG, Cancellation of higher frequency noise in electro- surgery.
ECG Data Reduction Techniques: Direct data compression techniques, Direct ECG data compression techniques, Transformation compression techniques, Other data compression techniques, Data compression techniques comparison.

3. WillisJ.Tompkins,"BiomedicalDigitalSignalProcessing",PHI,2006.
4. AkayM,"BiomedicalSignalProcessing",Academic:Press1994.

Course Outcomes**

After completion of the course student will be able to
1. Analyze the nature of Biomedical signals and related concepts.
2. Apply filters to remove noise from biomedical signals.
3. Apply averaging technique on biomedical signals and extract the features of EEG and ECG signals. Also analyze event detection techniques for EEG and ECG signals.
4. Applydifferentfiltersfornoisecancellationandsignalcompressiontechniqueson biomedical signals.

* **Books to be listed as per the format with decreasing level of coverage of syllabus**
** **Each CO to be written with proper action word and should be assessable and quantifiable**

SUBJECT CODE: 21UEC607E	Computer Organization	Credits: 03
L:T:P - 3 : 0 : 0		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

UNIT-I	10 Hrs.

Basic Structure of Computers: Computer Types, Functional Units, Basic Operational Concepts, Bus Structures, Performance–Processor Clock, Basic Performance Equation, Clock Rate, Performance Measurement, Historical Perspective.
Machine Instructions and Programs: Numbers, Arithmetic Operations and Characters, Memory Location and Addresses, Memory Operations, Instructions and Instruction Sequencing. Addressing Modes, Assembly Language, Basic Input and Output Operations, Stacks and Queues, Subroutines, Additional Instructions, Encoding of Machine Instructions.

UNIT–II	10 Hrs.

Input/Output Organization: Handling Multiple Devices, Controlling Device Requests, Exceptions, Direct Memory Access, Buses, Interrupts – Interrupt Hardware, Enabling and Disabling Interrupts, Handling Interface Circuits, Standard I/O Interfaces–PCI Bus and USB.

UNIT–III	10 Hrs.

Memory System: Basic Concepts, Semiconductor RAM Memories, Read Only Memories, Speed, Size and Cost, Cache Memories–Mapping Functions, Replacement Algorithms, Performance Considerations, Virtual Memories, Secondary Storage. **Arithmetic:** Addition And Subtraction of Signed Numbers, Design of Fast Adders, Multiplication of Positive Numbers

UNIT–IV	10 Hrs.

Arithmetic Cont.: Signed, Operand Multiplication, Fast Multiplication, Integer Division, Floating-point Numbers and Operations.
Basic Processing Unit: Fundamental Concepts, Execution of a Complete Instruction, Multiple Bus Organization, Hard-wired Control and Microprogrammed Control.

Reference Books *

2. David A. Patterson, John L. Hennessy, "Computer Organization and Design – The Hardware /Software Interface ARM Edition", Elsevier, 4th Edition, 2009
3. WilliamStallings,"ComputerOrganization&Architecture",PHI,7thEdition,2006

Course Outcomes**

After completion of the course student will be able to
1. Have thorough knowledge about structure and performance of a modern digital computer.
2. Analyze the different ways of communicating with I/O devices and standard I/O interfaces in a compute including using interrupt.
3. Analyze memory hierarchy including main memory, cache memory, virtual memory and secondary memory considering cost/performance. Different Mapping Functions of cache.
4. Implement arithmetic operations like multiplication, division and analyze the process of instruction execution of a complete instruction in the processing unit and its control.

* **Books to be listed as per the format with decreasing level of coverage of syllabus**
** **Each CO to be written with proper action word and should be assessable and quantifiable**

SUBJECT CODE: 21UEC608E	Digital Image Processing (Department Elective)	Credits: 03
L:T:P - 3: 0: 0		**CIEMarks:50**
Total Hours/Week: 03		**SEEMarks:50**

Course Objectives:
1. To provide the basic knowledge on image processing concepts.
2. To develop the ability to apprehend and implement various image processing algorithms.
3. To understand various image processing steps and their applications in real time
4. To facilitate the students to comprehend the contextual need pertaining to various image processing applications.

UNIT-I	10 Hrs.

Introduction- Digital Image, its Representation & point operations: Image Representation and Image Processing Paradigm - Elements of digital image processing, Image model. Sampling and quantization-Relationships between pixels- Connectivity, Distance Measures between pixels, Color image (overview, various color models)-Various image formats bmp, jpeg, tiff, png, gif, etc. Noise in Images Sources, types. Arithmetic operations, Logical operations, Spatial operations Single pixel, neighbour hood, geometric-Contrast Stretching-Intensity slicing-Bit plane slicing Power Law transforms.

UNIT–II	10 Hrs.

Image Enhancement: Spatial and Frequency domain-Histogram processing-Spatial filtering-Smoothening spatial filters, Sharpening spatial filters; Frequency filtering-Smoothening frequency filters-Sharpening frequency filters, Selective filtering.
Image Restoration: Noise models - Degradation models-Methods to estimate the degradation-Image deblurring Restoration in the presence of noise only spatial filtering-Periodic noise reduction by frequency domain filtering-Inverse filtering-Wiener Filtering.

UNIT–III	10 Hrs.

Feature Extraction: Region of interest (ROI) selection - Feature extraction: Histogram based features - Intensity features-Color, Shape features-Contour extraction and representation-Homogenous region extraction and representation-Texture descriptors.
Image Segmentation: Discontinuity detection-Edge linking and boundary detection. Thresholding-Region oriented segmentation- Histogram based segmentation. Object recognition based on shape descriptors.

UNIT–IV	10 Hrs.

Image Coding and Compression: Lossless compression versus lossy compression-Measures of the

compression efficiency- Huffmann coding, Bit plane coding, Arithmetic coding. Wavelet Transform in image processing: Wavelet Transform in one dimensions, Wavelet transforms in two dimensions. Fast Wavelet Transform , Other Applications of Wavelet in image processing.

5. Rafael C. Gonzalez, "Digital Image processing using MATLAB", Richard E. Woods and Steven Low price Edition, Pearson Education Asia, India, 2nd Edition, 2004.

Course Outcomes**

After completion of the course student will be able to
 1. Ascertain and describe the basics of image processing concepts through mathematical interpretation and operations.
 2. Acquire the knowledge of various image enhancement techniques involved.
 3. Demonstrate image restoration process and its respective filters required.
 4. Experiment the various image segmentation and feature extraction operations.
 5. Design the various image coding and compression procedures and illustrate the wavelet transform in images with its applications.

Assignment:

Students are required to develop programs using Matlab.
List of Programs
1. Write program to read and display digital image using MATLAB or SCILAB
   a. Become familiar with SCILAB/MATLAB Basic commands
   b. Read and display image in SCILAB/MATLAB
   c. Resize given image
   d. Convert given colour image into gray-scale image
   e. Convert given colour/gray-scale image into black & white image
   f. Draw image profile
   g. Separate colour image in three R G & B planes
   h. Create colour image using R, G and B three separate planes
   i. Write given 2-D data in image file
2. To write and execute image processing programs using point processing method
   a. Obtain Negative image
   b. Obtain Flip image
   c. Thresholding
   d. Contrast stretching
3. To write and execute programs for image arithmetic operations
   a. Addition of two images
   b. Subtract one image from other image
   c. Calculate mean value of image
   d. Different Brightness by changing mean value

4. To write and execute programs for image logical operations
   a. AND operation between two images
   b. OR operation between two images
   c. Calculate intersection of two images
   d. Water Marking using EX-OR operation
   e. NOT operation (Negative image)
5. To write a program for histogram calculation and equalization using
   a. Standard MATLAB function
   b. Program without using standard MATLAB functions
6. To write and execute program for geometric transformation of image
   a. Translation b. Scaling c. Rotation d. Shrinking e. Zooming
7. To understand various image noise models and to write programs for
   a. image restoration b. Remove Salt and Pepper Noise c. Minimize Gaussian noise d. Median filter and Weiner filter
8. Write a program in MATLAB/SCILAB for edge detection using different edge detection mask
9. To write and execute program for wavelet transform on given image and perform inverse wavelet transform to reconstruct image.

SUBJECT CODE: 21UEC609E	Embedded System	Credits: 03
L:T:P - 3 : 0 : 0		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

UNIT-I	10 Hrs.

Introduction to embedded systems, embedded system vs. general computing system, classifications, purpose of embedded system, major application areas including some novel applications. The typical embedded system: Core of embedded system, memory, sensors and actuators, communication interface, Characteristics and quality attributes of embedded systems.

UNIT–II	10 Hrs.

ARM-32 bit Microcontroller: Thumb-2 technology and applications of ARM, architecture of ARM Cortex M3, various units in the architecture, debugging support, general purpose registers, special registers, exceptions, interrupts, stack operation, reset sequence.

UNIT–III	10 Hrs.

Hardware software co-design and program modeling: fundamental issues in hardware software co-design, computational models in embedded system, hardware software trade-offs. Embedded firmware design and development: design approaches, Mixing assembly and high level language, Programming in embedded C.

UNIT–IV	10 Hrs.

Real-time operating system based embedded system: operating system basics, need for RTOS, types of operating system, tasks, process and threads, multiprocessing and multitasking, task scheduling, threads, processes and scheduling : putting altogether, task communication, task synchronization, device drivers.

Reference Books *

4. Frank Vahid, Tony Givargis, "Embedded system design: A unified hardware/software introduction", John Wiley and Sons, 2001.

Course Outcomes**

After completion of the course student will be able to
1. **Gain comprehensive knowledge about embedded systems, major application area of embedded systems and system components like memory, sensors and actuators.**
2. **Gain comprehensive knowledge about ARM-32 bit Microcontroller, architecture and other internal details.**
3. **Develop embedded applications on IDE environment and programming in embedded 'C'.**
4. **Explore one opensource RTOS and demonstrate the basic concepts of RTOS.**

* **Books to be listed as per the format with decreasing level of coverage of syllabus**

WirelessLocalAreaNetwork(WLAN):Networkcomponents,designrequirementsofWLAN, network architecture, WLAN standards, WLAN protocols, IEEE 802.11p, WLAN Applications

UNIT–III	10 Hrs.

Wireless Metropolitan Area Network (WMAN): Wireless Metropolitan area networks, WMAN network architecture ,network protocols, broadband wireless networks, WMAN Applications. Ad-hoc Networks: Introduction, Issues in Ad hoc wireless networks, Ad hoc wireless internet.

UNIT–IV	10 Hrs.

MAC Protocols for ad hoc wireless networks: Introduction, issues in designing a MAC protocol for Ad hoc wireless networks, design goals of a MAC protocol for Ad hoc wireless networks, classification of MAC protocols, contention based protocols with reservation mechanisms. Contention-based MAC protocols with scheduling mechanism, MAC protocols that use directional antennas, Other MAC protocols. Overview of ad hoc routing protocols.

SUBJECT CODE: 21UEC611N	Sensor Technology	Credits: 03
L:T:P – 3-0-0		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

UNIT-I	xx Hrs.

Sensor Fundamentals: Introduction, Definition, Types, and Sensor Characteristics
Principles of Sensing: Capacitive, Magnetic, Inductive, Resistive, Piezoelectric, Piezoresistance, Pyroelectric, Hall effect.
Interfacing Electronic Circuits: Input Characteristics of Interface Circuits, Amplifiers, Excitation Circuits, A to D Converters, Bridge Circuits, Data Transmitters, Batteries for low power sensors

UNIT–II	xx Hrs.

Overview of Sensor Materials: Sensor materials and material properties, Surface Processing of materials for development of Sensors.
Sensor Technologies: Micro technology, Micro-Electro-Mechanical Systems Technology, Nanotechnology
Sensor Applications: Displacement Sensing, level & Velocity Sensors, Accelerometers, Tactile Sensors, Pressure Sensors, Temperature Sensors, Comb drive Sensors.

UNIT–III	xx Hrs.

Mechanical and Electromechanical sensor: Definition, principle of sensing & transduction, classification. Resistive (potentiometric type): Forms, material, resolution, accuracy, sensitivity.
Strain gauge: Theory, type, materials, design consideration, sensitivity, gauge factor, variation with temperature,
Capacitive sensors: Stretched diaphragm type: microphone, response characteristics. Piezoelectric element: piezoelectric effect
Case Study: Piezoelectric and Capacitive Pressure Sensors, Cantilever based DNA Sensor, CNT based Pressure Sensor.

UNIT–IV	xx Hrs.

Interfacing: Communication Basics, parallel, serial and wireless communication, Basic protocol concept, communication protocols, USB interface, Processor interfacing basics, Controller and computer based control implementations. Introduction to wireless sensor network and wireless network protocols

4. H.K.P. Neubert, "Instrument transducers", Oxford University press.
5. E.A. Doebelin, "Measurement systems: application & design", Mc Graw Hill

Course Outcomes**

After completion of the course student will be able to
1. Use concepts for converting a physical parameter into an electrical quantity
2. Identify appropriate sensor materials and technology while designing sensors
3. Comprehend working principle of mechanical, strain gauge and capacitive sensors.
4. Set up sensor data acquisition and communication strategies
5. Suggest sensor performance improvement methodologies

* Books to be listed as per the format with decreasing level of coverage of syllabus
** Each CO to be written with proper action word and should be assessable and quantifiable

SUBJECT CODE: 21UEC612N	Image Processing (Open Elective)	Credits: 03
L:T:P - 3:0:0		CIEMarks:50
Total Hours/Week: 03		SEEMarks:50

Course Objectives:
1. To provide the basic knowledge on image processing concepts.
2. To develop the ability to apprehend and implement various image processing algorithms.
3. To understand various image processing steps and their applications in real time.
4. To facilitate the students to comprehend the contextual need pertaining to various image processing

UNIT-I	10 Hrs.

Introduction to Image processing: Fundamental steps in image processing; Components of image processing system; image sensing and acquisition; sampling and quantization; representation of digital images, image interpolation, Basic relationship between pixels; arithmetic and logic operations.

UNIT–II	10 Hrs.

Transformation and spatial filtering: Basics of intensity transformation and functions, Histogram Processing, equalization and histogram matching.Basics of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters. Image Restoration: Image Restoration: Image Degradation/Restoration Process, Noise Models.

UNIT–III	10 Hrs.

Restoration in the Presence of Noise Only-Spatial Filtering, Inverse Filtering, Minimum Mean Square Error (Wiener) Filtering, Color image processing: fundamentals, color models pseudo colour image processing, colour transformations.

UNIT–IV	10 Hrs.

Image Compression: Fundamentals, Image Compression Models and methods: Huffman coding, Golomb coding, arithmetic coding, LZW coding JPEG, predictive coding. Digital watermarking Applications in satellite, sonar, radar, medical areas and process industries.

Reference Books *

Steven Low price Edition, Pearson Education Asia, India, 2nd Edition, 2004.
4. S. Jayaraman, S. Esakkirajan, T.Veerakumar, "Digital Image Processing", Tata McGraw- Hill Education.

Course Outcomes

After completion of the course student will be able to

1. Articulate the fundamentals of Digital image processing including the simple image formation and relationship between pixels
2. Application of different types of Image transformation techniques, histogram processing and application of spatial filters.
3. Analyze the significance of image restoration and processing of colour images.
4. Illustrate the image compression like lossy and loss less image compression techniques.

Assignment:
Students are required to develop programs using Matlab.
List of programs:
1. Image Printing Program Based on Half toning.
2. Reducing the Number of Intensity Levels in an Image.
3. Zooming and Shrinking Images by Pixel Replication.
4. Zooming and Shrinking Images by Bilinear Interpolation.
5. Arithmetic Operations.
6. Image Enhancement Using Intensity Transformations.
7. Histogram Equalization.
8. Spatial Filtering.
9. Enhancement Using the Laplacian.

L:T:P – 3-0-0		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

UNIT-I	**xx Hrs.**

Introduction to Systems: Introduction, types, properties of systems, LTI Systems, Stability of systems. Non linear systems

Mathematical Modeling: Introduction, types of modeling, Abstraction, Linearity and superposition, balance and conservation laws and the system, boundary approach. Basic system elements in mechanical, electrical, fluid, magnetic and thermal systems

UNIT–II	**xx Hrs.**

Mathematical Modeling of Basic Engineering Systems: Introduction, Differential equations of basic engineering systems, Transfer functions, Block diagram algebra, Signal flow graphs.

Lumped Parameter Models: Mechanical systems (automobile suspension system, accelerometer), translational, rotational (simple rotational system). hydraulic systems (two tank hydraulic system), thermal systems (simple thermal system). Electrical Systems (capacitor microphone).

UNIT–III	**xx Hrs.**

Analysis of Systems: Introduction, time domain analysis of first order and second order systems, Frequency response of Linear Time invariant systems: Bode plots, phase margin and gain margin, stability analysis: Routh Hurvitz criteria. Introduction to State space representation of systems

UNIT–IV	**xx Hrs.**

Modeling and Simulation tools: Introduction, familiarization with modeling and simulation software, Simulation and analysis of mathematical models developed. Introduction to non-linear systems and linearization. Curve fitting in system modeling.

Course Outcomes**

After completion of the course student will be able to
1. Build a reduced order model of any engineering system and obtain its mathematical model
2. Visualize various factors to be considered in any engineering system design
3. Simulate the developed model Use software tools (e.g. SCILAB/XCOS) for modeling, simulation, and analysis
4. Analyze the system using simulation results

Course Title: **FUZZY LOGIC**	Course Code: **21UEC633N**
Credits: **3** L:T:P: **(3-0-0)**	Teaching Hours: **40 Hrs**	Contact Hours: **3 Hrs/Week**
CIE Marks: **50**	SEE Marks: **50**	Total Marks: **100**

Department: **Electronics and Communication Engg.**
Designation: **Open Elective**

Course Objectives:
This course will enable the students to understand
1. The basic ideas of fuzzy sets, operations and properties of fuzzy sets and also about fuzzy relations.
2. The basic features of membership functions, fuzzification process and defuzzification process.
3. Different inference methods to design fuzzy rule based system.
4. Fuzzy decision making by introducing some concepts and also Bayesian decision methods.

Course Outcomes:
A student who successfully completes this course should be able to
1. Develop the fundamental concepts such as fuzzy sets, operations and fuzzy relations.
2. Analyze fuzzification process and defuzzification of membership functions.
3. Design fuzzy rule based system and inference.
4. Apply random and non-random uncertainty and the decision making processes.

The topics that enable to meet the above objectives and course outcomes are given below

Unit I (10 hours)
Classical sets: Operations and properties of classical sets, Mapping of classical sets to the functions. Fuzzy sets - Membership functions, Fuzzy set operations, Properties of fuzzy sets.
Classical and Fuzzy relations: Cartesian product, crisp relations-cardinality, operations and properties of crisp relations. Fuzzy relations-cardinality, operations, properties of fuzzy relations, fuzzy Cartesian product and composition, Fuzzy tolerance and equivalence relations, value assignments and other format of the composition operation.

Unit II (10 hours)
Fuzzification and Defuzzification: Features of the membership functions, various forms, fuzzification, defuzzification to crisp sets, - cuts for fuzzy relations, Defuzzification to scalars. Fuzzy logic and approximate reasoning, Other forms of the implication operation.

Unit III (10 hours)
Fuzzy Systems: Natural language, Linguistic hedges, Fuzzy (Rule based) System, Aggregation of fuzzy rules, Graphical techniques of inference, Membership value assignments: Intuition, Inference, rank ordering, Fuzzy Associative memories.

Unit IV (10 hours)
Fuzzy decision making: Fuzzy synthetic evaluation, Fuzzy ordering, Preference and consensus, Multi objective decision making, Fuzzy Bayesian, Decision method, Decision making under Fuzzy states and fuzzy actions.

Text Books
1) Timothy J.Ross - Fuzzy logic with engineering applications, 3rd edition, Wiley,2010.
2) George J.KlirBo Yuan - Fuzzy sets and Fuzzy logic theory and Applications, PHI, New Delhi,1995.

POs satisfied by the course:

(a) Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

(b) Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

(c) Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations

(e) Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

(f) The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

(g) Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PSOs satisfied by the course:

m. Analyze and design systems for Electronics, Communication, and Signal Processing Applications.

Course Articulation Matrix:

SUBJECT CODE: 21UEC632N	Aircraft Electronics and Systems	Credits: 03
L:T:P - 3 : 0 : 0		CIEMarks:50
Total Hours/Week: 03		SEEMarks:50

Course Description:

Aircraft Electronics and Systems is designed to provide students with a comprehensive understanding of the electronic systems utilized in aircraft, including their principles, functionalities, and applications. The course covers various types of electronic systems crucial for flight control, navigation, communication, and avionics, enabling students to analyze, design, and troubleshoot aircraft electronics effectively.

Course Objectives:

1. To introduce students to the fundamental principles of aircraft electronics and systems.

2. To familiarize students with the different types of electronic systems employed in aircraft and their respective functionalities.

3. To develop students' skills in analyzing and interpreting aircraft parameters measuring instruments.

4. To enable students to understand the integration of electronic systems in modern aircraft for improved safety, efficiency, and performance.

5. To provide hands-on experience with aircraft electronic components, devices.

UNIT-I	10 Hrs.
Basics of Aircraft, forces, moments and angle of attack, engines avionics, history of aircraft design and characteristics, modern aircraft systems.	

UNIT–II	10 Hrs.
Aircraft Instruments, display types, grouping of displays, glass cockpit of modern aircraft, electronic flight instrument system (EFIS), introduction to air data instruments, types of air data instruments, two types viz pneumatic and air data instruments, temperature compensation, errors in ALTI, VSI and IVSI.	

UNIT–III	10 Hrs.
Engine instruments, engine speed measurement, torque measurement, pressure measurement, EGT indicator, Engine vibration measurement and monitoring.	

UNIT–IV	10 Hrs.
Engine fuel indicator, fuel quantity indicator, fuel quantity by weight, fuel flow rate indicator, electronic flight instrument system, FDS, ADI, HIS.

2. Pallett, E.B.J ., : "Aircraft Instruments -Principles and applications", Pitman and sons, 1981.

Course Outcomes**

After completion of the course student will be able to

1. Explain the fundamental principles underlying aircraft electronics and systems.

2. Identify and describe the various types of electronic systems utilized in aircraft.

3. Evaluate the functionalities and applications of different electronic systems in aircraft operations.

4. Collaborate effectively in team-based projects involving the design, implementation, and testing of aircraft electronic systems.

5. Demonstrate effective communication skills in presenting technical concepts related to aircraft electronics and systems.

Semester End Examination (SEE) Scheme of Evaluation

Semester: VI   Course: Mini-Project   Code: 21UEC613P   Credits:02   Hours/Week:--

Mini-Project is evaluated as per the guidelines of BEC Examination Reforms Policy. It is evaluated for 50 marks by a committee comprising of 1. Mini-Project Coordinator, 2. HoD/Nominee and 3. External Examiner. The details of evaluation are as follows.

Evaluation Criteria	Very poor (2)	Poor (4)	Average (6)	Good (8)	Very good (10)	Total marks	Evaluation Committee
1. Generate information through appropriate tests to improve or revise design-GA	Not able to identify suitable tests to be done	Able to identify but not able to follow testing procedures	Able to follow testing procedures but not able to collect information	Able to collect information but not able to apply it for improvement	Able to apply information for the improvement	50	Coordinator + HoD/ Nominee + External Examiner
2. Use appropriate procedures, tools and techniques to conduct experiments and collect data - GA	Not able to identify tools, techniques and procedures	Able to identify but not able to conduct experiments	Able to conduct experiments but not able to follow procedure	Able to follow procedure but not able to collect data	Able to collect data as per the standards		
3. Analyze data for trends and correlations	Not able to understand data	Able to understand but not able to analyze data	Able to analyze data but not able to correlate them	Able to correlate but not able to identify errors and limitations	Able to identify errors and limitations		
4. Deliver effective oral presentations to technical and non-technical	Could not deliver effective presentations.	Could not deliver presentation ,but presentation was	Able to deliver fair presentation but notable to answer to the audiences	Deliver effective presentations but able to answer partially to	Deliver effective presentation and able to answer all queries of the		

audiences-IA		prepared and attempted.		the audience queries'.	audience.		
5. Present results as a team, with Smooth Integration Of Contributions from all Individual efforts – GA+ IA	No Contribution from an individual to a team	Contributions from an individual to a team is minimal	Contribution s from an individ ual to a team is modera te	A contributio n From An individual to a team is good but not Well groomed in team.	Contribution from an individual to a team is good and results in an Integrated Team presentation.		

GA–Group Assessment   **IA** –Individual Assessment

Syllabus for
B.E. VII & VIII – Semester
(For students admitted to I year in 2021-22)

SUBJECT CODE: 21UEC701C	**Microwaves and Antennas**	**Credits: 03**
L:T:P - 3 : 0 : 0		CIEMarks:50
Total Hours/Week: 03		SEEMarks:50

UNIT-I	10 Hrs.

Introduction to microwaves: Microwave frequencies, IEEE microwave frequency bands.
Microwave transmission lines and rectangular waveguides: Introduction, transmission line equations, characteristic and input impedances, reflection and transmission coefficients, standing wave and SWR. Introduction to rectangular waveguides, TE and TM modes in rectangular waveguides.
Microwave vacuum tube device: Introduction, reflex klystron oscillator (mechanism of oscillation, mode of oscillation, power output and efficiency, mode curve), two cavity klystron amplifier (mechanism of operation).

UNIT–II	10 Hrs.

Microwave network theory and passive devices: Introduction, S-matrix representation of multi-port network, properties of S-matrix, matched terminations, rectangular to circular waveguide transition, attenuators, precision phase shifter, waveguide tees, E-plane tee, H-plane tee, magictee, applications of magic tee, faraday rotation isolator, four-port circulator, 2-hole directional coupler.
Microwave application: Microwave radar systems (radar equation, pulsed radar, CW doppler radar, FMCW radar).

UNIT–III	10 Hrs.

Fundamental Parameters of Antennas: Introduction, radiation pattern, radiation power density, radiation intensity, beam width, directivity, antenna efficiency, gain, beam efficiency, bandwidth, polarization, effective height, input impedance, antenna radiation efficiency, maximum directivity and maximum effective area, Friis transmission equation.
Antenna arrays: Array of two point sources, broad side array, end fire array, n-isotropic array, pattern multiplication. binomial and Chebyshev arrays, phased array.

UNIT–IV	10 Hrs.

Antenna Aperture: aperture concept, types of aperture, maximum effective aperture of short dipole and half wave dipole.
Antenna practice: Yagi-Uda antenna, turnstile antenna, log periodic antenna, helical antenna, rhombic antenna, horn antenna, parabolic reflector antennas, micro strip antenna and their feed systems.

9. PHINewDelhi,1993.

Course Outcomes**

After completion of the course student will be able to

1. **Acquire the knowledge of transmission line theory, rectangular waveguides and describe microwave vacuum tube device.**
2. **Analyze microwave passive devices with scattering parameters, and apply microwave application in radar systems.**
3. **Compute basic antenna parameters using radiation patterns, analyzeand design antenna arrays.**
4. **Analyze The Importance Of Antenna Aperture, explain the working principle of different antennas and their usage in real time field.**

*Books to be listed as per the format with decreasing level of coverage of syllabus
** Each CO to be written with proper action word and should be assessable and quantifiable

SUBJECT CODE: 21UEC707E	Speech Signal Processing	Credits: 03
L:T:P –3-0-0		CIEMarks:50
Total Hours/Week: 03		SEEMarks:50

UNIT-I	10 Hrs.

Digital representation of speech signal. Waveform representation and parametric representation. Sampling rate conversion.

Introduction, the process of speech production and classification and basics of phonetics, phonetic description of phonemes, the acoustic theory of speech production, digital models for speech – vocal tract, radiation, excitation the complete model.

UNIT–II	10 Hrs.

Introduction, time dependent processing of speech, short time energy and average magnitude, short time average zero crossing rate, voiced/unvoiced/silence detection. Pitch period estimation (Rabiner and Gold method), short time autocorrelation function, short time average magnitude difference function, u/v/speech/silence detection.

UNIT–III	10 Hrs.

Introduction, definitions and properties of short time Fourier transform (STFT), Fourier transform interpretation of STFT, linear filtering interpretation of STFT, sampling of STFT, speech analysis and synthesis systems (Vocoders), phase vocoder, channel vocoder.

UNIT–IV	10 Hrs.

Introduction, homomorphic transformation, frequency domain representation of homomorphic systems, inverse cepstum transformation, the complex cepstrum of speech, cepstral vocoder, processing applications of cepstral analysis.

Course Outcomes**

After completion of the course student will be able to
1. Explain the speech production and perception mechanism
2. Characterize and analyze speech signals in Time domain
3. Characterize and analyze speech signals in Frequency domain
4. Analyze speech signal using homomorphic transformation and LPC

L:T:P –3-0-0		CIEMarks:50
Total Hours/Week: 03		SEEMarks:50

UNIT-I	**10 Hrs.**

Introduction: What is Machine Learning? Python: Introduction, Data Types, Conditional statements, loops, functions, scikit-learn.
Essential Libraries and Tools: Jupyter Notebook, Numpy, Pandas, Scipy, matplotlib, A First Application: Classifying Iris Species.

UNIT–II	**10 Hrs.**

Supervised Learning: Classification and Regression, Generalization, Overfitting, and Underfitting, Supervised Machine Learning Algorithms: Some Sample Datasets, k-Nearest Neighbors, Linear Models, Naive Bayes Classifiers, Decision Trees, Neural Networks (Deep Learning).

UNIT–III	**10 Hrs.**

Unsupervised Learning and Preprocessing: Types of Unsupervised Learning, Challenges in Unsupervised Learning, Preprocessing and Scaling, Dimensionality Reduction, Feature Extraction, and Manifold Learning, Clustering: k-Means Clustering, Agglomerative Clustering

UNIT–IV	**10 Hrs.**

DimModel Evaluation and Improvement: Cross-Validation, Evaluation Metrics and Scoring.
Working with Text Data: Types of Data Represented as Strings, Example Application: Sentiment Analysis of Movie Reviews, Representing Text Data as a Bag of Words: Applying Bag-of-Words to a Toy Dataset, Bag-of-Words for Movie Reviews, Stopwords.

L:T:P – 3-0-0		**CIE Marks: 50**
Total Hours/Week: 03		**SEE Marks: 50**

UNIT-I	**10 Hrs.**

Introduction to MEMS Technology: Basic definitions, history and evolution of MEMS. Feynman's vision, microelectronics and MEMS, microsensors, microactuators and microsystems, Types of MEMS, Applications of MEMS in various disciplines. Commercial MEMS products.
Multiphysics-Multiengineering aspects of MEMS: Introduction to design, modeling and simulation, optimization, fabrication, reliability and packaging of MEMS.
Scaling issues in microsystems, examples and numerical problems based on scaling laws.

UNIT–II	**10 Hrs.**

Design and Working Principles of MEMS: Transduction principles in microdomain- Biomedical sensor & biosensor and DNA sensor, chemical sensor, optical sensor, pressure sensor, thermal sensor. Actuation using thermal force, shape-memory alloy, piezoelectric and electrostatic forces.Mechanical sensors and actuators – beams and cantilevers, accelerometers. Electrostatic sensors and actuators – parallel plate capacitors, comb drive sensor and actuator. Optical MEMS – DLP mirror; construction and working.

UNIT–III	**10 Hrs.**

Modeling and Simulation of MEMS: Basic modeling elements in mechanical systems, electrical systems, microfluidic systems, thermal systems, magnetic domain and electrostatic systems. Measurement tools in microsystems: AFM, SEM and optical inferometry. Characterization methods. Simulation of MEMS: Need for simulation, FEM, MEMS design and realization tools – ANSYS/Multiphysics, CoventorWare, COMSOL. AFM as a measurement tool in microsystems. Case Studies: Microcantilever based sensor, electrothermal actuator, electrostatic actuator.

UNIT–IV	**10 Hrs.**

Microfabrication/Micromachining: Overview of micro fabrication, silicon wafer extraction and cleaning, structural and sacrificial materials in microfabrication, lithography, deposition, doping, etching, Introduction to MEMS fabrication methods like surface, bulk, LIGA and wafer bonding methods.

Course Outcomes**
After completion of the course student will be able to

After completion of the course student will be able to
1. Comprehend the fundamentals of MEMS and expose students to the basic scaling laws as applied to micro domain.
2. Design and understand the working principle of various microsensing and actuating devices.
3. Mathematically model and simulate the various types of micro-systems
4. Comprehend the various steps involved in microfabrication and micromachining of micro devices, structures and systems.

SUBJECT CODE: 21UEC718E	VLSI Testing	Credits: 03
L:T:P – 3:0:0		CIE Marks: 50
Total Hours/Week: 40hrs		SEE Marks: 50

UNIT-I	10 Hrs.

Fault Modelling: Importance of Testing, Testing during the VLSI Lifecycle, Challenges in the VLSI Testing: Test Generation, Fault Models, Levels of Abstraction in VLSI Testing, Historical Review of VLSI Test Technology, Fault and Defect modeling: Functional Faults, Structural Faults, Structural Gate Level Faults: Recognizing Faults, Stuck-Open Faults, Stuck-at-0 Faults, Stuck at-1 Faults, Fault Collapsing.

Fault Simulation and Test Generation: Fault Simulation: Serial, Parallel, Deductive, Concurrent, Combinational Test Generations, ATPG for Combinational Circuits, D-Algorithm, Testability Analysis, SCOAP measures for Combinational Circuits

UNIT–II	10 Hrs.

Design for Testability: Introduction. Testability Analysis, Design for Testability Basics: Ad Hoc Approach, Structured Approach, Scan Cell Designs, Scan Design Rules, Scan Architectures, Scan Design Flow, Special Purpose Scan Designs, RTL Design for Testability.

UNIT–III	10 Hrs.

Built-in Self-Test: BIST Design Rules, Test Pattern Generation, Exhaustive Testing, Pseudo-Random Testing, Pseudo-Exhaustive Testing, Delay Fault Testing, Output Response Analysis, Logic BIST Architectures, BIST Architectures for Circuits with and without Scan Chains.

Boundary scan and Core based Testing : Digital Boundary Scan (IEEE Std. 1149.1): Test Architecture and Operations, On-Chip Test Support with Boundary Scan, Board and System-Level Boundary-Scan Control Architectures.

UNIT–IV	10 Hrs.

Test Compression and Compaction: Test Stimulus Compression: Code-Based Schemes, Linear-Decompression-Based Schemes, Test **Response** Compaction.
Fault Diagnosis: Dictionary based and Adaptive fault diagnosis.

Reference Books *

2. Laung-Terng Wang, Cheng-Wen Wu, and Xiaoqing Wen, "VLSI Test Principles and Architectures", The Morgan Kaufmann, 2013

Course Outcomes**

After completion of the course student will be able to

1. Model different fault models. Simulate faults and generate test patterns for combinational circuits.
2. Analysis and design for testability.
3. Recognize the BIST techniques for improving testability and understand boundary scanbased test architectures.
4. Analyse and apply the test vector compression techniques for memory reduction and fault Diagnosis.

Course Outcomes**

After completion of the course student will be able to

1. Formulate the graphs for the given problems, Calculate and analyse the computational complexity of physical design algorithms Partition a given design.
2. Express and change the floorplans in an abstract manner and use computer algorithms to make large and optimized floorplans
3. Make optimized placements on the silicon chip and perform complex routing using algorithms and computer codes.
4. Design clock trees to distribute the clock signals on the chip while satisfying various constraints like clock skew and wire length.

3. Multimedia Communication Systems- K. R. Rao, Zoran S. Bojkovic, Dragorad A. Milovanovic, Pearson Education, 2004. ISBN -9788120321458.

Course Outcomes**

After completion of the course student will be able to

 1. Identify the latest technological trends in multimedia communication to develop multimedia applications
 2. Design and develop digital forms of text and image information of multimedia application.
 3. Design and develop digital forms of audio and video information of multimedia application.
 4. Identify the QoS parameters of deferent networks of multimedia

POs satisfied by the course:

1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/Development of solution:** Design solutions of complex engineering problems and design system components of processes that meet the specificied needs withappropriate consideration for public health and safety and cultural, societal and environmental consideration
4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations. , safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice
6. **The engeer and society:** Apply reasoning inform by the contextual knowledge o assess societal, health
7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics:** Apply ethical principles and commit to professionalethics and responsibilities and norms of engineering practice
9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSOs satisfied by the course:

1. Analyze and design systems for Electronics, Communication, and Signal Processing applications.
2. Use domain specific tools for design, analysis, synthesis, and Validation of VLSI and embedded systems.
3. Demonstrate the conceptual knowledge with respect to architecture, design analysis and simulation of computer networking and applications.

SUBJECT CODE: 21UEC717E	Multirate Signal Processing	Credits: 03
L:T:P:–3:0:0		CIE Marks: 50
Hours/Week: 03		SEE Marks: 50

UNIT-I	10 Hrs

Fundamentals of multirate systems: Basic multirate operations, interconnection of building blocks, polyphase representation, multistage implementation, applications of multirate systems, special filters and filter banks, noble identities and their proof.

UNIT–II	10 Hrs

Multirate filter banks: Maximally decimated filter banks, Errors created in QMF bank, alias free QMF system, power symmetric QMF banks, M channel filter banks, poly-phase representation, perfect reconstruction systems, alias free filter banks, tree structured filter banks, trans-multiplexers.

UNIT–III	10 Hrs

Para-unitary perfect reconstruction filter banks: Lossless transfer matrices, filter bank properties induced by para-unitariness, two channel paraunitary lattices, M-channel FIR Para-unitary QMF banks, transform coding.

UNIT–IV	10 Hrs

Linear phase perfect reconstruction QMF banks: Necessary conditions, lattice structures for linear phase FIR –PR, QMF banks, formal synthesis of linear phase FIR –PR ,QMF lattice. Cosine modulated filter banks: Pseudo QMF bank and its design.

Reference Books

1. P. P. Vaidyanathan, ‒ Multirate systems and filter banks‖, Pearson Education(Asia) Pvt, Ltd, 2004.

3. N.J.Fliege, ‒Multirate Digital Signal Processing‖, John Wiley & sons, USA, 2000.

Course Outcomes**

After completion of the course student will be able to

1. Sample a signal at different rate and do transform domain analysis.

2. Design maximally decimated, QMF, polyphase, perfect reconstruction and tree structured
   filter banks.
3. Design Para-unitary perfect reconstruction, M-channel FIR para-unitary QMF filter banks.
4. Design linear phase perfect reconstruction, QM, cosine modulated and pseudo QMF filter
   banks.

SUBJECT CODE: 21UEC710E	Wavelets	Credits: 03
L:T:P:–3:0:0		CIE Marks: 50
Hours/Week: 03		SEE Marks: 50

UNIT-I	10 Hrs

Fundamentals of Linear Algebra: Vector spaces, Bases, Orthogonality, Orthonormality, Projection, Functions and function spaces, Orthogonal functions, Orthonormal functions, Orthogonal basis functions.

Short Time Fourier Transform (STFT): Limitations of Fourier domain signal processing, Signal representation with continuous and discrete STFT, concept of time-frequency resolution, Resolution problem associated with STFT, Heisenberg's Uncertainty principle and time frequency tiling, Why wavelet transform?

Self Study Component: Comparison between STFT and wavelet transform.

UNIT–II	10 Hrs

Introduction to Wavelet Transform: The origins of wavelets, Wavelets and other wavelet like transforms, History of wavelet from Morlet to Daubechies via Mallat, Different communities and family of wavelets, Different families of wavelets within wavelet communities.

Continuous Wavelet Transform: Wavelet transform-A first level introduction, Continuous time-frequency representation of signals, Properties of wavelets used in continuous wavelet transform, Continuous versus discrete wavelet transform

Self Study Component: Wavelet packet decomposition**.**

UNIT–III	10 Hrs

Discrete Wavelet Transform: Haar scaling functions and function spaces, Translation and scaling of $\phi(t)$, Orthogonality of translates of $\phi(t)$, Function space V0 , Finer Haar scaling functions, Concepts of nested vector spaces, Haar wavelet function, Scaled and translated Haar wavelet functions, Orthogonality of $\phi(t)$ and $\psi(t)$, Normalization of Haar bases at different scales, Refinement relation with respect to normalized bases, Support of a wavelet system, Daubechies wavelets, Plotting the Daubechies wavelets.

Self Study Component: Image compression using wavelets.

UNIT–IV	10 Hrs

Designing Orthogonal Wavelet Systems-A Direct Approach: Refinement relation for orthogonal wavelet systems, Restrictions on filter coefficients, Condition-1: Unit area under scaling function, Condition-2: Orthonormality of translates of scaling functions, Condition-3: Orthonormality of scaling and wavelet functions, Condition-4: Approximation conditions (Smoothness conditions), Designing Daubechies orthogonal wavelet system coefficients,

Constraints for Daubechies' 6 tap scaling function.
Self Study Component: Multi-resolution Analysis (MRA) using wavelets.

SUBJECT CODE: 21UEC712E	**Operating Systems**	**Credits: 03**
L:T:P – 3:0:0		CIE Marks: 50
Total Hours/Week: 40hrs		SEE Marks: 50

UNIT-I	**10 Hrs.**

Introduction: What Operating System Do, User View, System View, Operating-System Structure, Operating-System Operations, Process Management, Memory Management, Storage Management, Protection and Security.

System Structures: Operating-System Services, User and Operating-System Interface, System Calls, Types of System Calls, System Programs, Operating-System Design and Implementation, Operating-System Structure.

Process Management: Process Concept, Process Scheduling, Operations on Processes, Inter-process Communication.

Multithreaded Programming: Overview, Multicore Programming, Multithreading Models.

UNIT–II	**10 Hrs.**

Process Scheduling: Basic Concepts, Scheduling Criteria, Scheduling Algorithms, Thread Scheduling.
Process Synchronization: Background, The Critical-Section Problem, Peterson's Solution, Synchronization Hardware, Mutex Locks, Semaphores, Classic Problems of Synchronization, Monitors.
Deadlocks: System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, Recovery from Deadlock.

UNIT–III	**10 Hrs.**

Memory-Management Strategies: Background, Swapping, Contiguous Memory Allocation, Segmentation, Paging, Structure of the Page Table.

Virtual-Memory Management: Background, Demand Paging, Page Replacement, Allocation of Frames.

File system: File Concept, Access Methods, Directory and Disk Structure, File System Mounting, File Sharing.

UNIT–IV	**10 Hrs.**

Implementing File-Systems: File-System Structure, File-System Implementation, Directory Implementation, Allocation Methods, Free-Space Management.

Mass-Storage Structure: Overview ofMass-Storage Structure. Disk Structure, Disk Attachment, Disk Scheduling, Disk Management, Swap-Space Management.

System Protection and Security: Goals of Protection, Principles of Protection, Domain of Protection, Access Matrix, The Security Problem, Program Threats.

Reference Books *

Textbook:

1. Abraham Silberschatz , Peter B. Galvin, Greg Gagne," **Operating System Concepts**", 9 th edition, Wiley India, 2016 .

Reference Books:

1. Dhananjay M. Dhamdhere," **Operating Systems-A Concept Based Approach**", 3rd edition, Tata McGraw-Hill, 2012.
2. P.C.P.Bhatt," **Operating Systems**",2nd edition, PHI,2007.
3. William Stallings," **Operating Systems: Internals and Design Principles**",6th edition, Pearson, 2009.

Course Outcomes**

After completion of the course student will be able to

1. Describe the operating system structure, operations, services, design, thread and various features of process including scheduling, creation, termination, communication and explore inter process communication .
2. Discuss various CPU scheduling algorithms , several tools used to solve process synchronisation problems and also number of different methods for preventing or avoiding deadlocks.
3. Explore various memory management techniques and aspects related to file system.
4. Describe file system implementation, mass storage structure and protection

* **Books to be listed as per the format with decreasing level of coverage of syllabus**
** **Each CO to be written with proper action word and should be assessable and quantifiable**

UNIT-I	10 Hrs.

Crystal Growth and Silicon Wafer Preparation: Introduction, Semiconductor Silicon Preparation, Silicon Wafer Preparation Stages, Crystalline Materials, Unit Cells, Poly and Single Crystals, Crystal Orientation, Crystal Growth, Czochralski Method, Liquid-Encapsulated Czochralski, Float Zone, Crystal and Wafer Quality, Point Defects, Dislocations, Growth Defects, Wafer Preparation, End Cropping, Diameter Grinding, Crystal Orientation, Conductivity, and Resistivity Check, Grinding Orientation Indicators, WaferSlicing, Wafer Marking, Rough Polish, Chemical Mechanical Polishing, Backside Processing, Double-Sided Polishing ,Edge Grinding and Polishing, Wafer Evaluation, Oxidation, Packaging, Wafer Types and Uses.

Overview of Wafer Fabrication and Packaging: Introduction, Goal of Wafer Fabrication, Wafer Terminology, Chip Terminology, Basic Wafer-Fabrication Operations, Layering, Patterning, Circuit Design, Reticle and Masks, Doping, Heat Treatments, Example Fabrication Process, Wafer Sort, Packaging.

Contamination Control: Introduction, The Problem Contamination-Caused Problems, Contamination Sources, General Sources Air Clean Air Strategies Cleanroom Workstation Strategy Tunnel or Bay Concept Micro-and Mini-Environments Temperature, Humidity, and Smog. Cleanroom Construction, Construction Materials Cleanroom Elements Personnel-Generated Contamination Process Water Process Chemicals Equipment. Cleanroom Materials and Supplies, Cleanroom Maintenance, Wafer Surface Cleaning, Particulate Removal Wafer Scrubbers High-Pressure Water Cleaning Organic Residues Inorganic Residues Chemical-Cleaning Solutions General Chemical Cleaning Oxide Layer Removal Room Temperature and Ozonated Chemistries Water Rinsing Drying Techniques Contamination Detection.

UNIT–II	10 Hrs.

Oxidation: Introduction, Silicon Dioxide Layer Uses, Surface Passivation DopingBarrier Surface Dielectric Device Dielectric (MOS Gates) Device Oxide Thicknesses, Thermal Oxidation Mechanisms, Influences on the Oxidation Rate Thermal Oxidation Methods Horizontal Tube Furnaces Temperature Control System Source Cabinet Vertical Tube Furnaces Rapid Thermal Processing High-Pressure Oxidation Oxidant Sources, Oxidation Processes, Preoxidation Wafer Cleaning, Postoxidation Evaluation, Surface Inspection Oxide Thickness Oxide and Furnace Cleanliness Thermal Nitridation.

The Ten-Step Patterning Process-Surface Preparation to Exposure: Introduction, Overview of the Photomasking Process, Ten-Step Process, Basic Photoresist Chemistry, Photoresist, Photoresist Performance Factors, Resolution Capability Adhesion Capability Process,Latitude Pinholes Particle and Contamination Levels Step Coverage Thermal Flow Comparisonof Positive and Negative Resists. Physical Properties of Photoresists, Solids Content Viscosity Surface Tension Index of Refraction Storage and Control of Photoresists Light and Heat Sensitivity Viscosity Sensitivity Shelf Life Cleanliness. Photomasking Processes Surface Preparation to Exposure, Surface Preparation, Particle Removal Dehydration Baking Wafer Priming Spin Priming Vapor Priming, Photoresist Application (Spinning).The Static Dispense Spin Process Dynamic Dispense Moving-Arm Dispensing Manual Spinners Automatic Spinners Edge Bead Removal Backside Coating.

UNIT–III	10 Hrs.

Soft Bake, Convection Ovens Manual Hot Plates In-Line, Single-Wafer Hot Plates Moving-Belt Hot Plates Moving-Belt Infrared Ovens Microwave Baking Vacuum Baking, Alignment and Exposure, Alignment and Exposure Systems Exposure Sources Alignment Criteria Aligner Types Post exposure Bake, Advanced Lithography.

The Ten-Step Patterning Process-Developing to Final Inspection: Introduction, Development Positive Resist Development Negative Resist Development Wet Development Processes Dry (or Plasma) Development , Hard Bake, Hard-Bake Methods Hard-Bake Process Develop Inspect Develop Inspect Reject Categories Develop Inspect Methods Causes for Rejecting at the Develop Inspection Stage. Etch, Wet Etching, Etch Goals and Issues Incomplete Etch Overetch and Undercutting Selectivity Wet-Spray Etching Silicon Wet Etching Silicon Dioxide Wet Etching Aluminum-Film Wet Etching Deposited-Oxide Wet Etching Silicon Nitride Wet Etching Vapor Etching. Dry Etch, Plasma Etching Etch Rate Radiation Damage Selectivity Ion-Beam Etching Reactive Ion Etching. Resist Effects in Dry Etching, Resist Stripping, Wet Chemical Stripping of Nonmetallized Surfaces Wet Chemical Stripping of Metalized Surfaces Dry Stripping Post–Ion Implant and Plasma Etch Stripping, New Stripping Challenges Final Inspection Mask Making

Doping: Introduction, The Diffusion Concept, Formation of a Doped Region and Junction, The N-P Junction Doping Process Goals Graphical Representation of Junctions Concentration versus Depth Graphs Lateral Diffusion, Same-Type Doping Diffusion, Process Steps Deposition, Lateral Diffusion Same-Type Doping

UNIT–IV	10 Hrs.

Dopant Sources Drive-In Oxidation, Oxidation Effects Introduction to Ion Implantation Concept of Ion Implantation. Ion-Implantation System, Implant Species Sources. Ionization Chamber Mass Analyzing or Ion Selection Acceleration Tube Wafer Charging Beam Focus Neutral Beam Trap Beam Scanning End Station and Target Chamber Ion-Implant Masks Dopant Concentration in Implanted Regions Crystal Damage Annealing and Dopant Activation Channeling Evaluation of Implanted Layers Uses of Ion Implantation. The Future of Doping.

Layer Deposition: Introduction, Film Parameters, Chemical Vapor Deposition Basics, Basic CVD System Components CVD Process Steps CVD System Types, Atmospheric-Pressure CVD Systems Horizontal-Tube Induction-Heated APCVD Barrel Radiant-Induction-Heated APCVD Pancake Induction-Heated APCVD Continuous Conduction-Heated APCVD Horizontal Conduction-Heated APCVD Low-Pressure Chemical Vapor Deposition Horizontal Conduction-Convection-Heated LPCVD Ultra-High Vacuum CVD Plasma-Enhanced CVD (PECVD) High-Density Plasma CVD Atomic Layer Deposition Vapor-Phase Epitaxy Molecular Beam Epitaxy Metalorganic CVD Deposited Films Deposited Semiconductors Epitaxial Silicon Polysilicon and Amorphous Silicon Deposition SOS and SOI Gallium Arsenide on Silicon Insulators and Dielectrics Silicon Dioxide Doped Silicon Dioxide Silicon Nitride High-k and Low-k Dielectrics Conductors

Metallization: Introduction, Deposition Methods Single-Layer Metal Systems Multilevel Metal Schemes Conductors Materials Aluminum Aluminum-Silicon Alloys Aluminum-Copper Alloy Barrier Metals Refractory Metals and Refractory Metal Silicides Plugs Sputter Deposition Copper Dual-Damascene Process Low-k Dielectric Materials The Dual-Damascene Copper Process Barrier or Liner Deposition Seed Deposition Electrochemical Plating Chemical-Mechanical Processing CVD Metal Deposition Doped Polysilicon CVD Refractory Deposition Metal-Film Uses MOS Gate and Capacitor Electrodes Backside Metallization Vacuum Systems Dry Mechanical Pumps Turbomolecular Hi-Vac Pumps.

Reference Books
1. S.K.Gandhi, VLSI Fabrication principles, Wiley.
2. S.M. Sze, VLSI Technology, II edition, McGraw Hill.
3. W.R. Runyan, Silicon Semiconductor Technology, McGraw Hill

Course Outcomes**

After completion of the course student will be able to

1. Understand the basic steps of fabrication, wafer preparation, Crystal growth and packaging.
2. Understands the effect of contaminations on device processing, device performance.
3. Understands the uses of formation and process of silicon dioxide growth, Photoresist, wet etching and dry etching
4. To learn different types oxidation such as Chemical vapor Deposition, and LPCVD of poly silicon. Oxidation, Kinetics of oxidation.

* **Books to be listed as per the format with decreasing level of coverage of syllabus**

SUBJECT CODE: 21UEC705E	**Satellite Communication**	**Credits: 03**
L:T:P –3-0-0		CIEMarks:50
Total Hours/Week: 03		SEEMarks:50

UNIT-I	**10 Hrs.**

Overview of Satellite Systems: Frequency Allocations for Satellite Services. INTELSAT 4, U.S.Domsats 9 ,Polar Orbiting Satellites 12,Argos System 18, Cospas-Sarsat.

Orbits and Launching Methods: Kepler's First Law, Kepler's Second Law, Kepler's Third Law, Definitions of Terms for Earth-Orbiting Satellites, Orbital Elements, Apogee and Perigee Heights, Orbit Perturbations, The subsatellite point, Predicting satellite position, Local Mean Solar Time and Sun-Synchronous Orbits, Problems. Launches and Launch Vehicles, Expendable Launch Vehicles (ELVs),Placing Satellites into Geostationary Orbit, Orbital Effects in Communications Systems Performance.

UNIT–II	**10 Hrs.**

The Geostationary Orbit: Antenna Look Angles, The Polar Mount Antenna, Limits of Visibility, Near Geostationary Orbits, Earth Eclipse of Satellite, Sun Transit Outage, Problems.
 RadioWavePropagation:AtmosphericLosses,IonosphericEffects,RainAttenuation,Other Propagation Impairments,
Polarization: Antenna Polarization, Polarization of Satellite Signals, Cross-Polarization Discrimination, Ionospheric Depolarization, Rain Depolarization, Ice Depolarization.

UNIT–III	**10 Hrs.**

The Space Segment: The Power Supply, Attitude Control, Spinning Satellite stabilization, Momentum Wheel stabilization, Station Keeping, Thermal Control, TT&C Subsystem, Transponders, The wideband receiver, The input demultiplexer, The power amplifier Communications Subsystems: Description of the Communications System, Transponders, Satellite Antennas, Basic Antenna Types and Relationships, Example Global Beam Antenna Example Regional Coverage Antenna, Satellite Antennas in Practice, Equipment Reliability and Space

UNIT–IV	**10 Hrs.**

Low Earth Orbit and Non-Geostationary Satellite Systems: Orbit Considerations, Coverage Frequency & Considerations, Delay Throughput Considerations, System Considerations Operational NGSO Considerations Designs,

Satellite Navigation and the Global Positioning System:Radio and Satellite Navigation, GPS Position Location Principles, GPS Receivers and Codes, Satellite Signal Acquisition, GPS NavigationMessage,GPSSignalLevels,TimingAccuracy,GPSC/ACodeAccuracy, Differential GPS.

SUBJECT CODE: 21UEC709C	**Human Resource Management**	**Credits: 03**
L:T:P – 3-0-0		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

Course Objectives:
The objectives of this course are to:

1. **Examine** the fundamental principles of Human Resource Management and its evolving role in modern business environments, focusing on the functions of HRM and effective procurement strategies
2. **Evaluate** training and development methods, performance appraisal techniques, and career development strategies in human resource management, emphasizing their impact on organizational effectiveness.
3. **Analyze** variable compensation structures also examining the importance of industrial relations and collective bargaining processes in maintaining a harmonious work environment.
4. E**xamine** the complexities of International Human Resource Management (IHRM) and its impact on global business operations, focusing on international staffing, compensation strategies, and labor relations.

UNIT-I	10 Hrs.

Introduction: Nature of Human Resource Management (HRM), importance of human resource management, functions of human resource management, The changing environment of HRM and role of HRM in changing business scenario. **Procurement:** Job, job analysis, job description and job specifications, Man power Planning demand and supply forecasting, recruitment, methods of recruitment, Employees testing and selection, types of psychological tests and interviews, placement and induction.

UNIT–II	10 Hrs.

Development: Operative training and management development, methods of training and development. **Performance Appraisal:** Traditional and modern Methods. **Career Development:** career anchors, career development programme and the modern career problems. **Compensation:** Factor affecting compensation policy, job evaluation, methods of job evaluation.

UNIT–III	10 Hrs.

Variable Compensation: Individual & group, supplementary compensation-fringe benefits and current trends in compensation.**Integration:** Human relation, importance of industrial relations, causes and effects of Industrials disputes, Machinery for settlement of industrial disputes in India, Role of trade unions in maintaining relations. **Collective Bargaining:** concept, features, process and advantages. **Maintenance and separation:** Employee safety, health and welfare, Provisions under factory Act, 1948, Turnover, Retirement and Layoff.

UNIT–IV	10 Hrs.

International HRM: The growth of international business, HR and the international business challenge, effect of inter country difference on HRM, international staffing, international compensation and appraisal, international labor relations and Information Technology and HR.

Reference Books *

Textbooks :
1. Flippo Edwin B, "Personnel Management", 6th Edition, McGraw Hills 2000.
2. Dresler Garry, "Human Resource Management", 8th Edition, Pearson Education, New Delhi 2002.

Reference Book:
1. Memoria C B, "Personnel Management (Management of HRM)", Himalaya Publication, New Delhi 1999.

Course Outcomes**

A student who successfully completes this course should be able to:

1. **Analyze** job roles and specifications, conduct manpower planning, and effective recruitment and selection methods, including various psychological tests and interviews
2. **Compare** traditional and modern performance appraisal methods, **design** effective training and development programs, and **assess** compensation policies and job evaluation methods
3. **Evaluate** compensation trends and fringe benefits, **assess** the role of trade unions in industrial relations, and effective collective bargaining strategies to address workplace issues
4. **Analyze** the influence of inter-country differences on HR practices and **design** effective international HR strategies that address staffing, compensation, and labor relations challenges

* **Books to be listed as per the format with decreasing level of coverage of syllabus**
** **Each CO to be written with proper action word and should be assessable and quantifiable**

21UHS800C		Credits:02
Hrs/Week:2:0:0	**RESEARCH METHODOLOGY&IPR**	**CIEMarks:**50
TotalHours:26Hrs	(Common to All Branches)	**SEEMarks:**50

CourseObjectives:

1. To understand the basics of research and its types.
2. To learn the concept of Literature Review, Technical Reading, Attributions and Citations.
3. To learn Ethics in Engineering Research.
4. To Integrate Intellectual Property Rights with engineering sciences to cater to R&D requirements.

UNIT-I	5Hrs

Introduction to Engineering Research
Fundamentals of Research: Meaning, objectives, and motivation in engineering research.
Types of Engineering Research: Basic, applied, and translational research; identifying and solving Worthwhile problems.
Research Ethics: Ethics in engineering research and practice, types of research misconduct, and ethical issues in authorship.

UNIT-II	5 Hrs

Literature Review and Citations
Technical Reading & Analysis: Methods for reviewing literature, analyzing prior art, and synthesizing new and existing knowledge.
Bibliographic Databases: Web of Science, Google, Google Scholar, effective search strategies.
Conceptualizing Research: Critical and creative reading, taking notes, reading mathematical models, algorithms, and datasheets.
Citations & Acknowledgments: Attribution, citation styles, impact of keywords, citing datasets, and knowledge dissemination.

UNIT-III	8Hrs

Intellectual Property Rights (IPR) & Patents:
Introduction to Intellectual Property: Concepts of property and rights, forms of IPR, role in research
and economic development, IP governance, and global innovation indicators.
Patents: Definition, objectives, criteria for patentability, software/business method patents, infringement, compulsory licensing, and government use of inventions.
Patent Process: Prior art search strategies, patent databases (free and paid), drafting specifications and claims, filing requirements, jurisdiction, opposition procedures, and renewal.
Filing Requirement of patent: Patent Application Forms. Work flow chart in obtaining Patents, Jurisdiction of Filing Patent Application. Pre-grant & Post-grant Opposition. Forms to be submitted, filing mechanism through Individual patent office and PCT route. Need for a Patent Attorney/AgentRevocation. Term of Patent, Patent renewal and Fee Structure National Bodies Dealing with Patent Affairs. Utility Models

UNIT-IV	8Hrs

Copyrights, Trademarks, Industrial Design & GI

Copyrights: Nature, subject matter, authorship, digital copyright, fair use, infringement,enforcement, and international agreements.

Trademarks: Meaning, functions, distinctiveness, registration, non-conventional marks, infringement, and domain name issues.

Industrial Design: Definition, registration process in India, infringement, and case laws.

Geographical Indications (GI): Acts, laws, ownership rights, registered GIs in India, protection, certification marks, enforcement, and registration process.

IP Organizations & Policies: Overview of IP schemes, national programs, and regulatory bodies in India.

Case Studies & Applications

Patents: Case studies on Curcuma (Turmeric), Neem, and Basmati patents.

Copyright & Trademark Disputes: Interesting Copyrights Cases,Case studies (e.g., Coca-Cola vs. Bisleri, Apple vs. Samsung).

Course Outcomes:

At the end of the course student will be able to:
 CO1: Integrate research methodology in engineering sciences in relevant trades.
 CO2: Exhibit reflective thinking in problem solving exercises.
 CO3: Identify criteria to fit one's own intellectual work in particular form of IPRs and able to
        apply statutory provisions and procedure to protect different forms of IPRs at
        national and international level.
 CO4: Develop skill of making search using modern tools and techniques and also student
        is able to become patent agent by cracking patent agent exam.
