Subject Title	:	Advanced Web Programming(Integrated)
Subject code	:	22UIS305C
Semester	:	3
Credits with LTP Structure	••	04 Credits ( 3L-0T-2P)
Lecture Hours per Week	:	3
Practical Hours per Week	2	
Tutorial Hours per Week	:	0
Total Contact Hours/Week	:	03 Teaching Hours + 02 Practical Hours = 05 Hours
Course Objectives:		
<b>1.</b> Understand the principles of	Wo	orld Wide Web and also to create an effective web page.
2. Use CSS to implement a var	iety	of presentation effects in XHTML and XML documents.
3. Develop basic programming	ski	lls using JavaScript.
4. Implement interactive and dy	ynar	nic web page(s) using XHTML, JavaScript,XML,PHP,etc
		gramming works on the web using PHP technology and design

**5.** Understand how server-side programming works on the web using PHP technology and design responsive web pages using PHP.

#### **Course Outcomes:**

#### After completing the course the student will be able to:

- 1. Develop JavaScript scripts for basic problems.
- 2. Develop JavaScript scripts for event handling.
- 3. Build dynamic documents using JavaScript and XHTML.
- 4. Develop web pages using XML technology.
- 5. Implement web pages using PHP.

#### **CO-PO Mapping:**

Course Outcomes				Pr	ogra	ım (	)utc	ome	s (P	Os)			Program Specific Outcomes (PSOs)			
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3	
Develop JavaScript scripts for basic problems.	3	2	3		1							1	1	2	1	
Develop JavaScript scripts for event handling.	3	2	3		1							1	1	2	1	
Build dynamic documents using JavaScript and XHTML.	3	2	3		1							1	1	2	1	
Develop web pages using XML technology.	3	2	3		1							1	1	2	1	
Implement web pages using PHP.	3	2	3		1							1	1	2	1	

1: Low correlation 2: Moderate correlation 3: High correlation

UNIT - I	<b>09 Hours</b>	Teaching Hours	Tutorial Hours
<b>Basics of JavaScript:</b> General syntactic characteristics; Primitives, Scr and keyboard input; Control statements; Object creation and modification Functions; Pattern matching using regular expressions.		09	00
UNIT - II	09 Hours	Teaching Hours	Tutorial Hours
JavaScript & XHTML Documents: The Document Object Model Access in JavaScript, Events & Event Handling, Basic Concepts handling, Events, Attributes & Tags, Handling Events from Body Handling Events from Button Elements, Handling Events from T password Elements, The Focus Event, Validating from Input, The DOI Model, Event Propagation, Event handler registration, An Example of th Event Model, The Navigator Object.	of Event Elements, Textbox & M 2 Event	09	00
UNIT - III	11 Hours	Teaching Hours	Tutorial Hours
<ul> <li>Dynamic Documents with JavaScript: Introduction, Positioning Absolute Positioning, Relative Positioning, Static Positioning, Moving Element Visibility, Changing Colors &amp; Fonts, Changing Colors, Chang Dynamic Contents, Stacking Elements, Locating the Mouse Cursor, R the Mouse Click, Slow Movement of Elements.</li> <li>Introduction to XML: Introduction, The Syntax of XML, XML Structure, Document Type Definitions: Declaring Elements, Declaring Entities, A Sample DTD, Internal &amp; External DTDs.</li> </ul>	Elements, ging Fonts, Reacting to Document	11	00
UNIT - IV	11 Hours	Teaching Hours	Tutorial Hours
<b>Introduction to PHP:</b> Origins and Uses of PHP, Overview of PHI Syntactic Characteristics, Primitives, Operations and Expressions, Output statements, Arrays, Functions, Pattern Matching, Form Handling, Files Session Tracking, Database access with PHP and MySQL.	ut, Control	11	00
Reference Books:         1. Programming the World Wide Web - Robert W. Sebesta, 4th Edit	ition, Pearso	on Education	, 2008

#### **Laboratory Assignments**

**1.** Develop JavaScript scripts for the following:

i.to model a simple calculator using 'switch' statement

ii.to print the number of prime numbers in a given range L to R using functions iii.to find whether the given number is an Armstrong number using functions iv. to find the number of occurrences of a character in a string using functions.

- 2. Develop and demonstrate using Javascript an XHTML document to validate the USN (the valid format is: A digit from 1 to 4 followed by two upper-case characters followed by two digits; no embedded spaces allowed) of the user. Event handler must be included for the form element that collects this information to validate the input. Messages in the alert windows must be displayed when errors are detected.
- 3. Develop XHTML document with Java Script to handle events as follows:
  - i) 'Blur' event to transform the input text to upper case.
  - ii) 'focus' event to change the background color of a text box.
  - iii) 'Change' event to display the preferred browser in an alert box when the user relocates the browser from a drop-down menu.
  - iv) 'click' event to copy the contents of one text in to another.
- 4. Create and demonstrate an XHTML document using Java Script for event handling as follows:

XHTML document should contain a set of radio buttons showing names of web programming tools. On clicking a particular button, event handler should be called to display a brief description about the related tool using an alert box.

5. Develop and demonstrate an XHTML document as follows:

The XHTML document must contain four paragraphs stacked on the top of each other with only enough of each showing so that the mouse cursor when placed over the exposed part of any paragraph, it should rise to the top to become completely visible.

6. Develop an XHTML document to accept user details. Develop a PHP script to retrieve these and display them with appropriate messages.

Product Name	Price/item (Rs)	Quantity
А	20	
В	30	
С	40	

7. Write XHTML code to create a table as follows and enter the quantity required.

Create a set of radio buttons to accept the payment method needed-cheque, cash or card. Develop a PHP script to display the results in a table, which should contain product name, price, quantity and total cost for each product. Below the table, display the total number of ordered items, the total cost and the payment method used.

8. Create an XHTML document to accept student data which contains student name, branch and college name. Write a PHP document to insert data into the MySQL database and retrieve the particular database on student name from the database and display.

#### UNIT – I Statistics

Curve fitting by the method of least squares: y = a + bx,  $y = ab^x$ ,  $y = a + bx + cx^2$  Correlation,

expression for the rank correlation coefficient and regression.

#### (RBT Levels: L1, L2 and L3)

#### UNIT – II Probability

Addition rule, conditional probability, multiplication rule, Baye's rule. Discrete and continuous random variables-Probability density function, Cumulative distribution function, Problems on expectation and variance.

#### (RBT Levels: L1, L2 and L3)

#### UNIT – III Probability distributions

Binomial distributions, Poisson distributions and Normal distributions. Concept of joint probability, Joint probability distributions.

(RBT Levels: L1, L2 and L3)

#### **UNIT – IV Markov chains**

Introduction, Probability vectors, Stochastic Matrices, Fixed Points and Regular stochastic Matrices, Markov chains, higher transition probabilities, stationary distribution of regular Markov chains and absorbing states.

#### (RBT Levels: L1, L2 and L3)

<ul> <li>Amount: int)</li> <li>(i) Create the above tables by properly specifying the primary keys and the foreign keys.</li> <li>(ii) Demonstrate how you <ul> <li>a. Update the damage amount to 25000 for the car with a specific Regno in the ACCIE</li> </ul> </li> </ul>	OWNS ( <u>Driver-id</u> #:	string, <u>Regno</u> :string)			
<ul> <li>(i) Create the above tables by properly specifying the primary keys and the foreign keys.</li> <li>(ii) Demonstrate how you</li> <li>a. Update the damage amount to 25000 for the car with a specific Regno in the ACCIE</li> </ul>	PARTICIPATED (D	river-id: string, Regno:string, Report-Number: i	nt, Damage		
<ul><li>(ii) Demonstrate how you</li><li>a. Update the damage amount to 25000 for the car with a specific Regno in the ACCIE</li></ul>	Amount: int)				
<ul><li>(ii) Demonstrate how you</li><li>a. Update the damage amount to 25000 for the car with a specific Regno in the ACCIE</li></ul>	(i) Create the above tables I	by properly specifying the primary keys and the	foreign keys.		
a. Update the damage amount to 25000 for the car with a specific Regno in the ACCIE					
	•	ge amount to 25000 for the car with a specific	Regno in the ACCIDEN'		
table with report number 12.	table with report	-			
b. Add a new accident to the database.					
(iii) Find the total number of people who owned cars that were involved in accidents in 2008.			accidents in 2008		

(iv) Find the number of accidents in which cars belonging to a specific model were involved.

3. Consider the following database of student enrollment in courses & books adopted for each course:

STUDENT (<u>Regno:</u> string, Name: string, Major: string, Bdate:date)

COURSE (Course #:int, Cname:string, Dept:string)

ENROLL ( <u>Regno</u>:string, <u>Course#:</u>int, <u>Sem</u>:int, Marks:int)

BOOK \_ ADOPTION (<u>Course#</u> :int, <u>Sem</u>:int, <u>Book-ISBN</u>:int)

TEXT (Book-ISBN:int, Book-Title:string, Publisher:string, Author:string)

(i) Create the above tables by properly specifying the primary keys and the foreign keys.

(ii) Demonstrate how you add a new textbook to the database and make this book be adopted by some department.

(iii) Produce a list of textbooks (include Course #, Book-ISBN, Book-Title) in the alphabetical order for courses offered by the 'CS' department that use more than two books.

(iv) List any department that has *all* its adopted books published by a specific publisher.

4. A database management system is to be created for a study centre to keep track of the students and the assignments records of the students. The database records the date of submission of assignments, the date of evolution, the date of viva, the date of declaration of results, who evaluated the assignment, and the mark list description in which the assignment marks were sent to regional office. The database also maintains the details of the evaluators. Perform the following activities for the description as given above.

a) Design the database with suitable integrity constraints and create the database

b) Write the following queries using SQL:

- (i) Find the list of the students who have not submitted even a single assignment
- (ii) Find the details of the evaluators by whom average marks awarded are more than 70%
- (iii) Find the students who have passed more than 5 assignments
- (iv) Find the list of students who have not appeared in VIVA. Make and state suitable assumptions, if any.

5. Design a database for maintaining the details of shows and ticketing for the shows of multiples. New perform the following activities for the system:

a) Create the database

b) Write the following queries using SQL

- (i) Find the details of the movies whose shows are not yet full
- (ii) Find the details of the movies that had been screened at least one year earlier to
- (iii) Find the names of those that have an overall state of 60% of capacity on all days of screening

6. Consider the following database for a banking enterprise:

BRANCH(<u>Branch-name</u>:string, Branch-City:string, Assets:real)

ACCOUNT(Accno:int, Branch-Name:string, Balance:real)

#### DEPOSITOR(Customer-Name:string, Accno:int)

CUSTOMER(<u>Customer-Name</u>:string, Customer-Street:string, Customercity: string)

LOAN(<u>Loan-Number</u>:int, Branch-Name:string, Amount:real) BORROWER(Customer-Name:string, Loan-Number:int)

- (i) Create the above tables by properly specifying the primary keys and the foreign keys
- (ii) Find all the customers who have at least two accounts at the Main branch.
- (iii) Find all the customers who have an account at all the branches located in a specific city.
- (iv) Demonstrate how you delete tuples in ACCOUNT relation at every branch located in a specific city.
- (v) Find all loan numbers for loans made at the specific branch with loan amounts greater than Rs1200.
- (vi) Find all loan numbers for loans with loan amounts between Rs 90,000 and Rs100000.
- 7. Demonstrate views using SQL

#### Part-B

- 1. Write a PL/SQL code to demonstrate nested block.
- 2. Write a PL/SQL code to retrieve a employee name form employee database.
- 3. Write a PL/SQL code to calculate tax for employee and display taxable amount.
- 4. Write a PL/SQL code to calculate total & percentage of marks of the students in four subjects.
- 5. Write a PL/SQL code to reverse a sting.
- 6. Write a PL/SQL code to find the factorial of a given number.
- 7. Demonstrate transactions in PL/SQL.

22UMA400M		Credits - Mandatory L-T-P:(3:0:0)
Hours / Week : 03	Bridge Course Mathematics-II	CIE Marks : 50
Total Hours : 40		SEE Marks : 50

#### **Differential Calculus**

Review of elementary calculus, Polar curves - angle between the radius vector and tangent, angle between two curves, pedal equation. Taylor's and Maclaurin's series expansions for one variable ( without proof) problems

#### (RBT Levels: L1, L2 and L3)

#### **Vector Differentiation**

Introduction, Scalar and vector fields. Gradient, directional derivative; curl and divergence-physical interpretation; solenoidal and irrotational vector fields- problems.

#### (RBT Levels: L1, L2 and L3)

#### Laplace Transform

Introduction, Definition of Laplace Transform, Laplace Transform of standard functions, Properties: Shifting, differentiation, Integral and division by t. Periodic function, Heaviside's Unit step function.

#### (RBT Levels: L1, L2 and L3)

#### Inverse Laplace transforms

Properties, Convolution theorem-problems, Solutions of linear differential equations.

(RBT Levels: L1, L2 and L3)

#### **Laboratory Assignments**

- 1. Develop a Java applet to accept three integers from the user and display the largest one with appropriate messages.
- 2. Develop a Java servlet to accept user details entered through a web form and display the same with appropriate messages.
- 3. Develop a java applet which performs arithmetic operations on two numbers entered by the user and present the results to the user.(by handling actions events on buttons)
- 4. Develop a Java applet which handles mouse events by displaying the respective event names and co-ordinates.
- 5. Develop a Java servlet to read and write cookies.
- 6. Write a Java program to create a database table, insert records in it, and display them.
- 7. Write a Java program to update an existing database table.
- 8. Write a JSP program to print the multiplication table of a number entered by user.
- 9. Write a JSP program to print Fibonacci series for a given number.
- 10. Write a JSP program to:
  - a) Demonstrate error page in JSP
  - b) Display HTTP request headers in table form on a web page.

## Laboratory Assignments

## Part A

Simulate the following experiments using NS2 simulators

- 1. Three node point to point network with duplex link between them.
- 2. Four node point to point network using TCP/UDP.
- 3. Different types on internet traffic such as FTP, TELNET and analyze throughput.
- 4. Ethernet LAN using N nodes (6-10), change error rate and data rate and compare throughput.

### Part B

Write C program for:

- 1. Error detection using CRC-CCITT (16-bits).
- 2. Bit stuffing and de-stuffing of binary data.
- 3. Client sending the file name and the server to send back the contents of the requested file if present, using TCP/IP Socket.
- 4. congestion control using leaky bucket algorithm

# **Course Outcomes:**

## After completing the course the student will be able to:

- 1. Demonstrate a fundamental knowledge of the core concepts in automata theory and formal languages.
- 2. Prove the properties of languages, grammars and automata with formal mathematical methods;
- 3. Analyse the closure properties of regular and context-free languages.
- 4. Design finite automata, pushdown automata, Turing machines for solving language pattern recognition patterns.
- 5. Apply mathematical and formal techniques for solving problems.
